AGL Special SAT
How to use the Feature list

20.Aug.2020
TOYOTA MOTOR CORPORATION

Toyota idea

In this Product Ready Profile activity, we want to bring **AGL** closer to **Product** from the perspective of OEM or supplier.

feature list(SPEC-3519)

⬆

It's necessary to collect function candidates which each OEM or supplier expects for AGL, or which aren't enough compared to product.

And it's desirable to make concrete requirements (function) specifications.

So we think in this activity we'll collect function requirements, summarize as a specification document and develop them **in Product Ready**.

QA for the feature list

- How is the score result used?

⇒ We think it's better to do the following.

1. Collect the results
2. Share the high-priority functions from the perspective of Product Ready
3. Make specification of the functions
4. Contribute or develop the functions by developer or OEM.

- Should we give 0 points if we think that the current AGL component is better, and give a score if we want to replace it?

⇒Toyota wants you to have points added to the functions that seem to need improvement from the perspective of Product Ready, and in addition to create the requirement specifications.

- How do we write a feature list that we are not interested in codedrop or developing in OSS, but are interested in?
  Should I write a comment with 0 points?

⇒Please have them scored if it's needed as Product Ready, and if you have any concerns or issues, please comment as appropriate.
