Function Documentation

CXMLReader* GetCXMLReaderObject (CHAR * *f_cFilePath*)

Brief

Get CXMLReader object.

Parameters:

[IN]	f_cFilePath std::string - path of file to parse

Return values:

CXMLReader	*

Prerequisite

Load the shared library first.

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync

See also:

None

CXMLWriter* GetCXMLWriterObject (CHAR * *f_cFilePath*)

Brief

Get CXMLWriter object.

Parameters:

[IN]	f_cFilePath std::string - path of file to parse

Return values:

CXMLWriter	*

Prerequisite

Load the shared library first.

Inside state change

The API no inside state change

None

Classification

Detailed Description

Class Documentation

struct __CWORD77_Data

CWORD77 Data structure

Class Members:

EDataType	DataType	
string	DataValue	

Macro Definition Documentation

#define _CWORD77__DATA_POOL_KEY(ProtocolId) (std::make_pair(ProtocolId, g_c_CWORD77_ServiceName))

Function Documentation

std::string ConvertArrayStringsToString (std::string * *strArr*, SI_32 *Size*)

ConvertArrayStringsToString Function to convert array of strings to string

Parameters:

in	*strArr*	string * - pointer to array of strings
in	*Size*	SI_32 - Number of strings

Returns:

string

void ConvertStringToArrString (std::string *Input*, std::string * *strArr*, UI_32 & *ArraySize*)

ConvertArrayStringsToString Function to convert string to array of strings

Parameters:

in	*Input*	string - string contains array of strings
out	*strArr*	string * - Pointer to Array of strings
out	*ArraySize*	UI_32 - No of elements in Array

Returns:

None

template<class T > void GetRequestArrayData (UI_32 *VarName*, T * *Array*, UI_32 & *ArraySize*)

GetRequestArrayData Templatized Function to get array data from Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*Array*	T * - Pointer to an array of given type
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

Here is the call graph for this function:

IMAGE

void GetRequestArrayStringData (UI_32 *VarName*, std::string *DataValue*[], UI_32 & *size*)

GetRequestArrayStringData API to get array of string data from Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*DataValue*	string [] - array of strings
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > T GetRequestData (UI_32 *VarName*)

GetRequestData Templatized Function to get data from Resquest *CWORD77* Data base

Parameters:

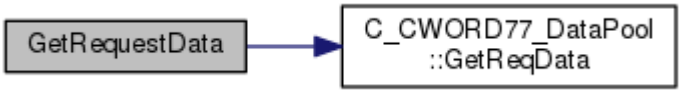
in	*VarName*	UI_32 - key

Returns:

T - value belong to type T

Here is the call graph for this function:

IMAGE



UI_32 GetRequestDataLength (UI_32 *Key*)

GetRequestDataLength API to get No of elements in a key from request data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

UI_32 - No of elements

EDataType GetRequestDataType (UI_32 *Key*)

GetDataTypeFromRequestTable API to get data type of key from request data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

EDataType - Data type of key

std::string GetRequestStringData (UI_32 *VarName*)

GetRequestStringData API to get string data from Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

string - value of data

E_CWORD33_Status GetRespDataFrom_CWORD77_DataPool (const _CWORD77_DataPoolKey & *f_DataPoolKey*, UI_32 & *f_uiSize*, PVOID & *f_pData*)

Brief

API to get data associated with response from *CWORD77* Data Pool

Parameters:

in	*f_DataPoolKey*	_CWORD77_DataPoolKey - Data pool key
out	*f_uiSize*	UI_32 - size of the data
out	*f_pData*	PVOID - void pointer to data

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusFail	Error

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Set Get

See also:

SetRespNotfnDataFrom_CWORD77_DataPool, C_CWORD77_Data::GetRespoData

E_CWORD33_Status GetRespNotfnDataFrom_CWORD77_DataPool (const std::string & *f_cNotificationName*, UI_32 & *f_uiSize*, PVOID & *f_pData*)

Brief

API to set data associated with notification response into *CWORD77* Data Pool

Parameters:

in	*f_cNotificationName*	const std::string& - Name of the notification
out	*f_uiSize*	UI_32& - size of the data

out	*f_pData*	PVOID& - void pointer to data

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusFail	Fail

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Set Get

See also:

SetRespNotfnDataFrom_CWORD77_DataPool, C_CWORD77_Data::GetRespoData

template<class T > void GetResponseArrayData (UI_32 *VarName*, T * *Array*, UI_32 & *ArraySize*)

GetRequestArrayData Templatized Function to get array data from Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*Array*	T * - Pointer to an array of given type
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

Here is the call graph for this function:

IMAGE

void GetResponseArrayStringData (UI_32 *VarName*, std::string *DataValue*[], UI_32 & *size*)

GetResponseArrayStringData API to get array of string data from Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*DataValue*	string [] - array of strings
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > T GetResponseData (UI_32 *VarName*)

GetResponseData Templatized Function to get data from Response *CWORD77* Data base

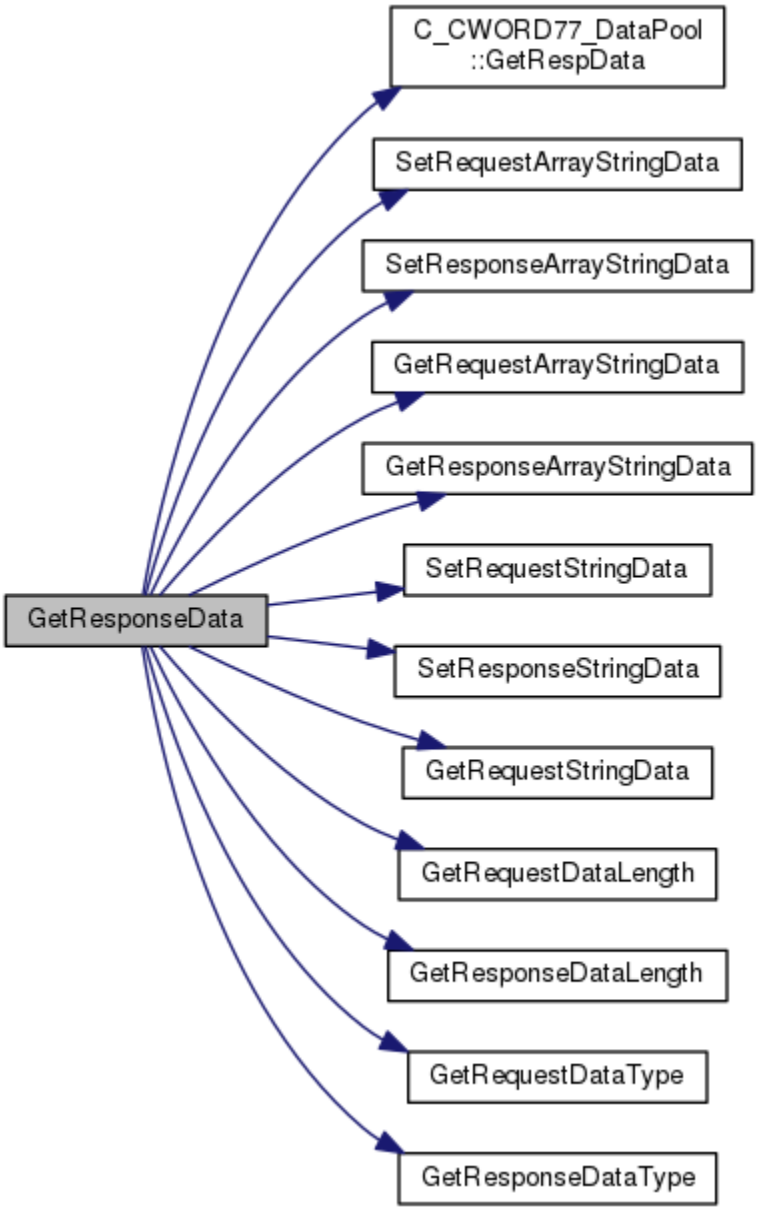
Parameters:

in	*VarName*	UI_32 - key

Returns:

T - value belong to type T

Here is the call graph for this function:



IMAGE

UI_32 GetResponseDataLength (UI_32 *Key*)

GetResponseDataLength API to get No of elements in a key from response data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

UI_32 - No of elements

EDataType GetResponseDataType (UI_32 *Key*)

GetDataTypeFromResponseTable API to get data type of key from response data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

EDataType - Data type of key

UI_32 NoOfElementsinData (std::string *Input*)

NoOfElementsinData Function to get number of elements for given string

Parameters:

in	*Input*	string - string

Returns:

UI_32 - Number of elements

VOID SetReqDataIn_CWORD77_DataPool (const _CWORD77_DataPoolKey & *f_DataPoolKey*, UI_32 *f_uiSize*, PVOID *f_pData*)

Brief

API to set data associated with request into *CWORD77* Data Pool

Parameters:

in	*f_DataPoolKey*	_CWORD77_DataPoolKey - Data pool key
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	PVOID - void pointer to data

Return values:

none	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

template<class T > void SetRequestArrayData (UI_32 *VarName*, EDataType *DataType*, T * *Array*, UI_32 *ArraySize*)

SetRequestArrayData Templatized Function to set array data into Response *CWORD77* Data base

Parameters:

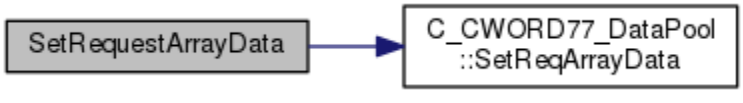
in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T * - Pointer to an array of given type
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

Here is the call graph for this function:

IMAGE



void SetRequestArrayStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*[], UI_32 *size*)

SetRequestArrayStringData API to set array of string data into Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > void SetRequestData (UI_32 *VarName*, EDataType *DataType*, T *Array*)

SetRequestData Templatized Function to set data into Request *CWORD77* Data base

Parameters:

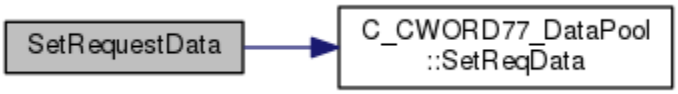
in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T - Data type of key

Returns:

None

Here is the call graph for this function:

IMAGE



void SetRequestStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*)

SetRequestStringData API to set string data into Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings

Returns:

None

VOID SetRespNotfnDataIn_CWORD77_DataPool (const std::string & *f_cNotificationName*, UI_32 *f_uiSize*, const PVOID *f_pData*)

Brief

API to set data associated with notification response into *CWORD77* Data Pool

Parameters:

in	*f_cNotificationName*	const std::string& - Name of the notification
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	const PVOID - void pointer to data

Return values:

none	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

template<class T > void SetResponseArrayData (UI_32 *VarName*, EDataType *DataType*, T * *Array*, UI_32 *ArraySize*)

SetRequestArrayData Templatized Function to set array data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T * - Pointer to an array of given type
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

Here is the call graph for this function:

IMAGE

void SetResponseArrayStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*[], UI_32 *size*)

SetRequestArrayStringData API to set array of string data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > void SetResponseData (UI_32 *VarName*, EDataType *DataType*, T *Array*)

SetRequestData Templatized Function to set data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T - Data type of key

Returns:

None

Here is the call graph for this function:

IMAGE 
void SetResponseStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*)

SetResponseStringData API to set string data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings

Returns:

None

Detailed Description

Class Documentation

struct __CWORD33_DefaultCallbackHandler

Callbacks structure of Application Life cycle

Class Members:

CbFuncPtr	createStateMachine	Callback of created state machine.
CbFuncPtr	onBackgroundStart	Callback of Background start.
CbFuncPtr	onBackgroundStop	Callback of Background stop.
CbFuncPtr	onDebugDump	Callback of debug dump.
CbFuncPtr	onDestroy	Callback of destroy.
CbFuncPtr	onInitilization	Callback of initialization.
CbFuncPtr	onPreStart	Callback of pre start.
CbFuncPtr	onPreStop	Callback of pre stop.
CbFuncPtr	onStart	Callback of startup.
CbFuncPtr	onStop	Callback of stop.
CbFuncPtr	ssFrameworkInterface	Callback to Establish a session with the system_manager.

struct __CWORD33_ProtocolCallbackHandler

Class Members:

CbFuncPtr	callBack	
UI_32	iCmd	

struct __CWORD33_FdProtocolCallbackHandler

Class Members:

CbFuncPtr	callBack	
int	fd	

struct __CWORD33_NotificationCallbackHandler

Class Members:

CbFuncPtr	callBack	
CHAR	cNotification[MAX_STRING_SIZE_NOTIFICATION]	

struct __CWORD33_NotificationsList

Class Members:

CHAR	cNotification[MAX_STRING_SIZE_NOTIFICATION]	
E_CWORD33_NotificationType	persType	
UI_32	uiLengthData	

struct __CWORD33_ProtocolEvent

Class Members:

UI_32	iCmd	
UI_32	iEventId	

struct __CWORD33_NotificationEvent

Class Members:

CHAR	cNotification[MAX_STRING_SIZE_NOTIFICATION]	
UI_32	iEventId	

struct _ServiceAvailability

Class Members:

CHAR	cServiceName[MAX_NAME_SIZE_APP]	
E_CWORD33_ServiceAvailableStatus	eServiceAvailability	

struct _ShutdownComplete

Class Members:

CHAR	cServiceName[MAX_NAME_SIZE_APP]	
E_CWORD33_ShutdownStatus	eShutdownCompleteStatus	

struct _CustomCommandLineOptions

Class Members:

CbArgumentParser	callback	
PCHAR	cLongOptions	
PCSTR	cShortOptions	

struct __CWORD33_ChildThreadAttr

Child Thread Attribute.

Class Members:

E_CWORD33_SchedPolicy	schedPolicy	
SI_32	schedPriority	

struct _OpenSessionAck

Class Members:

CHAR	cSessionName[MAX_QUEUE_NAME_SIZE]	
E_CWORD33_Status	eStatus	
UI_32	sessionId	
UI_32	sessionType	

struct _CloseSessionReq

Class Members:

CHAR	cSessionName[MAX_QUEUE_NAME_SIZE]	
UI_32	sessionId	

struct _CloseSessionAck

Class Members:

E_CWORD33_Status	eStatus	
UI_32	sessionId	

struct _SYSTEMTIME

Class Members:

WORD	wDay	
WORD	wDayOfWeek	
WORD	wHour	
WORD	wMilliseconds	
WORD	wMinute	
WORD	wMonth	
WORD	wSecond	
WORD	wYear	

Macro Definition Documentation

Typedef Documentation

typedef struct __CWORD33_DefaultCallbackHandler _CWORD33_DefaultCallbackHandler

Callbacks structure of Application Life cycle

typedef UI_16 MID

Types that have been carried over from Color Radio header file WPFAPI_types.h.
CR carry over types...

Enumeration Type Documentation

enum _E_CWORD33_ClearPersistence

Enumerator

e_CWORD33_ClearAllData (currently only this enum value is supported.)
clears all the data in persistence memory for all users

e_CWORD33_ClearAllApplicationData clears all the data(files, folders) related to all application for all users

e_CWORD33_ClearAllNotificationData clears all the notification data related to all application for all users

e_CWORD33_ClearCurrentUserData clears all the data in persistence memory for current users

e_CWORD33_ClearCurrentUserApplicationData related to all application for current users
clears all the data(files, folders)

e_CWORD33_ClearCurrentUserNotificationData related to all application for current users
clears all the notification data

enum _E_CWORD33_NotificationType

Enumerator

e_CWORD33_NotificationVar Non Persistent. Not stored locally by NPS.

e_CWORD33_StateVar Non Persistent. stored locally by NPS.

e_CWORD33_PersistedStateVar Persistent. Also stored locally by NPS.

e_CWORD33_PersistedStateUserVar User specific Persistent. Also stored locally by NPS.

e_CWORD33_ImmediatePersistedStateVar Not to be used. See _CWORD33_NPRegisterImmediatePersistNotification.

e_CWORD33_Unknown defining any notification.

This is not a type of notification and should not be used while

enum _E_CWORD33_ReleaseType

defines the Release types

Enumerator

e_CWORD33_NotOnRelease 0:not on release

e_CWORD33_PersistOnShutdown 1:persist on shutdown

e_CWORD33_PersistInstantly 2:persist instantly

enum _EApplicationStates

Enumerator

eAppInital Initial: state value.

eAppIdle Idle: application shouldn't be processing anything.

eAppReady Ready: application is ready to do work.

eAppConnecting Connecting: Service is connecting.

eAppDisconnecting Disconnecting: Service is disconnecting.

enum _EBaseProtocol

Enumerator

PROTOCOL_OPEN_SESSION_REQ Open session request (client > service)

PROTOCOL_OPEN_SESSION_ACK Open session ack (service > client)

PROTOCOL_OPEN_SESSION_REQ_SYNC Open session request sync (client > service)

PROTOCOL_CLOSE_SESSION_REQ Close session request (client > service)

PROTOCOL_CLOSE_SESSION_ACK Close session ack (service > client)

PROTOCOL_CLOSE_SESSION_REQ_SYNC Close session request sync (client > service)

PROTOCOL_REGISTER_EVENTS Register for events (client > service)

PROTOCOL_REGISTER_EVENTS_ACK Register for events ack (service > client)

PROTOCOL_UNREGISTER_EVENTS Un-Register for events (client > service)

PROTOCOL_THREAD_INITIALIZATION Initialize thread after creation.

PROTOCOL_THREAD_WAKEUP Wakeup Thread after sleep.

PROTOCOL_THREAD_SHUTDOWN Stop the thread.

PROTOCOL_THREAD_DESTROY Destroy the thread.

PROTOCOL_RSV_0D Reserved.

PROTOCOL_RSV_0E Reserved.

PROTOCOL_DIS_MSGPROFILER Reserved.

PROTOCOL__CWORD33__BASE_CMD Protocols between range PROTOCOL__CWORD33__BASE_CMD to PROTOCOL__CWORD33__MAX_CMD.

PROTOCOL__CWORD33__MAX_CMD are available for *CWORD33* applications to use.

PROTOCOL_RSV_xF1 Reserved.

PROTOCOL_RSV_xF2 Reserved.

PROTOCOL_RSV_xF3 Reserved.

PROTOCOL_RSV_xF4 Reserved.

PROTOCOL_RSV_xF5 Reserved.

PROTOCOL_RSV_xF6 Reserved.

PROTOCOL_RSV_xF7 Reserved.

PROTOCOL_RSV_xF8 Reserved.

PROTOCOL_RSV_xF9 Reserved.

PROTOCOL_RSV_xFA Reserved.

PROTOCOL_RSV_xFB Reserved.

PROTOCOL_RSV_xFC Reserved.

PROTOCOL_TIMER_DUMMY_CMD NS internally use this command in timer.

enum _ESMRetrieveTypes

Enumerator

eSMRRelease data will be released on a read

eSMRRetain data will be retained in the shared memory

enum e_CWORD33_Status

Enumerator

e_CWORD33_StatusEmptyMediaList Empty media list.

e_CWORD33_StatusSessionLimitMaxedOut Maximum session limit reached.

e_CWORD33_StatusDbRecNotFound Database record not found.

e_CWORD33_StatusDbResultError Database result error.

e_CWORD33_StatusDbExecuteFail Database execute fail.

e_CWORD33_StatusSemCloseFail Semaphore close failed.

e_CWORD33_StatusSemUnlockFail Semaphore unlock failed.

e_CWORD33_StatusSemLockFail Semaphore lock failed.

e_CWORD33_StatusFail Failed.

e_CWORD33_StatusErrOther Unknown error.

e_CWORD78_StatusOK Success / Pass / OK.

e_CWORD33_StatusInvldBuf Invalid buffer.

e_CWORD33_StatusInvldHandle Invalid handle.

e_CWORD33_StatusInvldHndlType Invalid handle type.

e_CWORD33_StatusInvldQName Invalid messasge queue name.

e_CWORD33_StatusMsgQFull Message queue full.

e_CWORD33_StatusInvldNotification The Notification event not present.

e_CWORD33_StatusInvldParam Invalid parameter.

e_CWORD33_StatusInvldBufSize Buf size too small.

e_CWORD33_StatusInvldID Unrecognized ID.

e_CWORD33_StatusCannotRelease Cannot release resource.

e_CWORD33_StatusBadConnection Could not locate resource.

e_CWORD33_StatusExit Normal application termination.

e_CWORD33_StatusNotImplemented incomplete feature

e_CWORD33_StatusThreadBusy Joined thread is already being joined.

e_CWORD33_StatusThreadSelfJoin Thread is joining itself.

e_CWORD78_StatusThreadInvalidVal Invalid value passed.

e_CWORD33_StatusThreadNotExist The thread does not exist.

e_CWORD33_StatusFault A fault occurred while attempting to make call.

e_CWORD33_StatusServNotFound Service not present in serv dir.

e_CWORD33_StatusServerInUse Service already processing 1 client request.

e_CWORD33_StatusDbIndexing Database Indexing in progress.

e_CWORD33_StatusFileLoadSuccess File Load Success.

e_CWORD33_StatusFileLoadError File Load Error.

e_CWORD33_StatusAccessError Error when accessing resource.

e_CWORD33_StatusDuplicate Duplicate entry.

e_CWORD33_StatusMsgQEmpty Message queue empty.

e_CWORD33_StatusErrNoEBADF Bad file descriptor.

e_CWORD33_StatusErrNoEAGAIN Resource unavailable, try again.

e_CWORD33_StatusErrNoEINTR Interrupted system call.

e_CWORD33_StatusSessionErr Error in session handling.

e_CWORD33_StatusDBCorrupt Database corrupt.

e_CWORD33_StatusDBFileNotFound Database file not found.

Function Documentation

E_CWORD33_Status _CWORD33_AttachCallbacksToDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, const _CWORD33_ProtocolCallbackHandler * *pMsgHandler*, UI_32 *uiHandlerCount*, HANDLE *hSession* = NULL)

Brief

API to register multiple Callback-informations to the Dispatcher.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pServiceName*	PCSTR - Pointer to the service name
in	*pMsgHandler*	_CWORD33_ProtocolCallbackHandler* - Pointer to the Message Handler structure
in	*uiHandlerCount*	UI_32 - Message Handler count(14294967295)
in	*hSession*	HANDLE - Session handle (Default:NULL)

_CWORD33_ProtocolCallbackHandler Structure

```
1 typedef struct __CWORD33_ProtocolCallbackHandler
2 {
3     /* Command ID/request ID/approval ID  of protocol on the service */
4     UI_32 iCmd;
```

```
5       /* Pointer to Callback function that would be called on receiving iCmd from pServiceName. */
6       CbFuncPtr callBack;
7 }_CWORD33_ProtocolCallbackHandler;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_AttachCallbackToDispatcher, _CWORD33_DetachCallbackFromDispatcher,
_CWORD33_DetachCallbacksFromDispatcher,
_CWORD33_AttachParentCallbacksToDispatcher,
_CWORD33_DetachParentCallbacksFromDispatcher,
_CWORD33_DetachServiceFromDispatcher

E_CWORD33_Status _CWORD33_AttachCallbacksToDispatcherWithFd (HANDLE *hApp*, const _CWORD33_FdProtocolCallbackHandler * *handlers*, UI_32 *handlerCount*)

0 (fpOnCmd)NULL [e_CWORD33_StatusInvldParam]
1 (hApp)epoll [e_CWORD33_StatusFail]
2 (epoll_ctl) [e_CWORD33_StatusFail]
3 (epoll_ctl) [e_CWORD33_StatusFail]

4 **Brief**

API to register multiple Callback and file descriptor set to the Dispatcher.

5 **Parameters:**

in	*hApp*	HANDLE - HANDLE for Application
in	*handlers*	_CWORD33_FdProtocolCallbackHandler* - Pointer to the Message Handler structure to be registered
in	*handlerCount*	UI_32 - Message Handler Count(14294967295)

6

_CWORD33_FdProtocolCallbackHandler Structure

```
1 typedef struct __CWORD33_FdProtocolCallbackHandler
2 {
3       int fd;             /* File descriptor for message waiting control */
4       CbFuncPtr callBack;   /*  Pointer to Callback function             */
5 }_CWORD33_FdProtocolCallbackHandler;
```

7 **Return values:**

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred

8 **Prerequisite**

9 Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

10 **Change of internal state**

11 Change of internal state according to the API does not occur.

E_CWORD33_Status _CWORD33_AttachCallbackToDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, UI_32 *iCmd*, CbFuncPtr *fpOnCmd*, HANDLE *hSession* = NULL)

Brief

API to register a Callback-information to the Dispatcher.

Parameters:

in	*hApp*	HANDLE - Handle for Application
in	*pServiceName*	PCSTR - Pointer to the service name
in	*iCmd*	UI_32 - Command ID/request ID/approval ID of protocol on the service
in	*fpOnCmd*	CbFuncPtr - Pointer to Callback function that would be called on receiving iCmd from pServiceName.
in	*hSession*	HANDLE - Session handle (Default:NULL)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_AttachCallbacksToDispatcher, _CWORD33_DetachCallbackFromDispatcher, _CWORD33_DetachCallbacksFromDispatcher, _CWORD33_AttachParentCallbacksToDispatcher,

_CWORD33_DetachParentCallbacksFromDispatcher,
_CWORD33_DetachServiceFromDispatcher

E_CWORD33_Status _CWORD33_AttachCallbackToDispatcherWithFd (HANDLE *hApp*, int *fd*, CbFuncPtr *fpOnCmd*)

Brief

API to register a callback that link to a single file descriptor to the Dispatcher.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*fd*	int - File descriptor for message waiting control
in	*fpOnCmd*	CbFuncPtr - Pointer to Callback function

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_AttachCallbacksToDispatcherWithFd,
_CWORD33_DetachCallbackFromDispatcherWithFd,
_CWORD33_DetachCallbacksFromDispatcherWithFd

E_CWORD33_Status _CWORD33_AttachLostSessionCallbackToDispatcher (HANDLE *hApp*, CbFuncPtr *fpLostSession*)

Register abnormal session disconnect callback

Parameters:

in	*hApp*	HANDLE - Application framework handle
in	*fpLostSession*	12 Generation/Initialization of Dispatcher for the Application by _CWORD33_CreateDispatcherWithoutLoop has been done.

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid Parameter

Preconditions

Generation/Initialization of Dispatcher for the Application by _CWORD33_CreateDispatcherWithoutLoop has been done.

Change of internal status

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

_CWORD33_CreateDispatcherWithoutLoop, _CWORD33_DispatcherWithArguments, _CWORD33_SimpleDispatcher

E_CWORD33_Status _CWORD33_AttachParentCallbacksToDispatcher (HANDLE *hChildApp*, const _CWORD33_ProtocolCallbackHandler * *pMsgHandler*, UI_32 *uiHandlerCount*)

Brief

API to register multiple callback information for the parent thread to the Dispatcher.

Parameters:

in	*hChildApp*	HANDLE - HANDLE for Application
in	*pMsgHandler*	_CWORD33_ProtocolCallbackHandler* - Pointer to the Message Handler structure
in	*uiHandlerCount*	UI_32 - Message Handler count(14294967295)

_CWORD33_ProtocolCallbackHandler Structure

```
1 typedef struct __CWORD33_ProtocolCallbackHandler
2 {
3     /* Command ID/request ID/approval ID  of protocol on the service */
4     UI_32 iCmd;
5     /* Pointer to Callback function that would be called on receiving iCmd from pServiceName. */
6     CbFuncPtr callBack;
7 }_CWORD33_ProtocolCallbackHandler;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_AttachCallbackToDispatcher, _CWORD33_AttachCallbackToDispatcher, _CWORD33_DetachCallbackFromDispatcher, _CWORD33_DetachCallbacksFromDispatcher, _CWORD33_AttachParentCallbacksToDispatcher, _CWORD33_DetachParentCallbacksFromDispatcher, _CWORD33_DetachServiceFromDispatcher

HANDLE _CWORD33_AttachTimerCallback (HANDLE *hApp*, UI_32 *initMS*, UI_32 *repeatMS*, CbFuncPtr *CbFn*)

Brief

Attach a callback to hApp dispatcher that will get called initially at initNS nanoseconds, and then repeatedly at repeatNS nanoseconds

Parameters:

in	*hApp*	HANDLE - hApp parent framework HANDLE
in	*initMS*	UI_32 - milliseconds to begin triggering callback(04294967295)
in	*repeatMS*	UI_32 - milliseconds between repeated triggerings of callback(04294967295)
in	*CbFn*	CbFuncPtr - Callback to be triggered

Return values:

Handle	to the timer object or NULL on failure

Preconditons

hApp has already gotten the dispatcher(return NULL)

Change of internal status

Classification

Type

Open Close

See also:

_CWORD33_DetachTimerCallback

E_CWORD33_Status _CWORD33_ClearDeferMessages (HANDLE *hApp*)

_CWORD33_ClearDeferMessages Clear all the defer messages

Parameters:

in	*hApp*	HANDLE - Handle to the App / Thread

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_DeferMessage, _CWORD33_RetrieveDeferMessage

E_CWORD33_Status _CWORD33_ClearMsgData (HANDLE *hApp*)

Type

Sync

See also:

_CWORD33_McOpenSender, _CWORD33_McClose, _CWORD33_SendMsg, _CWORD33_GetMsgLength, _CWORD33_GetMsgSrc, _CWORD33_GetMsgDataOfSize, _CWORD33_GetDataUSID, _CWORD33_ForwardMessage, _CWORD33_GetSystemInfo

E_CWORD33_Status _CWORD33_CloseService (HANDLE *hApp*, HANDLE *hService*)

Brief

API to close service HANDLE.

Parameters:

in	*hApp*	HANDLE - Handle for Application
in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService HANDLE acquired in)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_OpenService

E_CWORD33_Status _CWORD33_CloseSession (HANDLE *hService*, HANDLE *hSession*)

Brief

API to close the session.

Parameters:

in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService HANDLE acquired in)
in	*hSession*	HANDLE - Handle to the session(_CWORD33_OpenSession HANDLE acquired in)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_OpenSession, _CWORD33_OpenSessionWithData, _CWORD33_GetOpenSessionHandle

E_CWORD33_Status _CWORD33_CloseSessionSync (HANDLE *hService*, HANDLE *hSession*, CloseSessionAck * *ack*)

Brief

API to close the session (synchronous).

Parameters:

in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService HANDLE acquired in)
in	*hSession*	HANDLE - Handle to the session(_CWORD33_OpenSessionSync HANDLE acquired in)
out	*ack*	CloseSessionAck - Pointer to the response data of the session close

CloseSessionAck Structure

```
1 typedef struct _CloseSessionAck
2 {
3     UI_32 sessionId;                /* Session ID          */
4     E_CWORD33_Status eStatus;               /* Status              */
5 }CloseSessionAck;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusBadConnection	It can not be a socket connection
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusOK	[eStatus in CloseSessionAck]Success in serivice side.
e_CWORD33_StatusFail	[eStatus in CloseSessionAck]Some sort of error occurred in service side.

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_OpenSessionSync, _CWORD33_OpenSessionWithDataSync

HANDLE _CWORD33_CreateChildThread (HANDLE *hApp*, PCSTR *childName*, CbFuncPtr *CbInitialize*, CbFuncPtr *CbShutdown*)

Brief

Create child thread and dispatcher for child thread, and initialize it

Parameters:

in	*hApp*	HANDLE - Handle for Application of parent thread
in	*childName*	PCSTR - Child thread name
in	*CbInitialize*	CbFuncPtr - Pointer to the callback function for initializing child thread
in	*CbShutdown*	CbFuncPtr - Pointer to the callback function for stopping child thread

Return values:

HANDLE	handle for communicate with child thread
NULL	Failure to get HANDLE

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Open Close

See also:

_CWORD33_DestroyChildThread

E_CWORD33_Status _CWORD33_CreateChildThreadAttrInit (_CWORD33_ChildThreadAttr * *attr*)

Brief

Initialize thread attribute object.

Parameters:

out	*attr*	_CWORD33_ChildThreadAttr* - Pointer to thread attribute

_CWORD33_ChildThreadAttr Structure

```
1 typedef struct __CWORD33_ChildThreadAttr
2 {

_CWORD33_DestroyChildThread

E_CWORD33_Status _CWORD33_CreateDispatcherChild (HANDLE & *hChildApp*, PCSTR *childName*, PCSTR *parentName*)

Brief

Create and initialize an threads dispatcher.

Parameters:

out	*hChildApp*	HANDLE& - Reference of application handle
in	*childName*	PCSTR - create thread name
in	*parentName*	PCSTR - parent thread name

Returns:

status E_CWORD33_Status - e_CWORD33_StatusOK if Success possible errors from call CreateDispatcher

E_CWORD33_Status _CWORD33_CreateDispatcherWithoutLoop (PCSTR *cAppName*, HANDLE & *hApp*, int *argc*, char * *argv*[], const _CWORD33_DefaultCallbackHandler * *CbHandler*, BOOL *bIsConnectSM*, CustomCommandLineOptions * *cmdLineOptions* = NULL)

Brief

This API creates and initializes the dispatcher with command-line options.

Parameters:

in	*cAppName*	PCSTR - Pointer to application thread name
out	*hApp*	HANDLE - Handle for Application
in	*argc*	int - Number of command-line options
in	*argv*	char *[] - Array of pointer to command-line options
in	*CbHandler*	const _CWORD33_DefaultCallbackHandler* - Pointer to default callback functions.
in	*bIsConnectSM*	BOOL - whether or not connect with System Manager(TRUE/FALSE)
in	*cmdLineOptions*	CustomCommandLineOptions* - Parser setting of command-line options(Optional. When don't use, set NULL.)

_CWORD33_DefaultCallbackHandler Structure

```
1   typedef struct __CWORD33_DefaultCallbackHandler
2   {
3       CbFuncPtr onInitilization;          /* Function is called when a Dispatcher is created.
4                   */

```

CustomCommandLineOptions Structure

```
1   typedef struct _CustomCommandLineOptions
2   {
3       PCSTR       cShortOptions;      /* Short options list. */
4       PCHAR       cLongOptions;       /* Reserved. Set to NULL. */
```

```
5                   CbArgumentParser callback;          /* Pointer to callback function to parse command-line
6 *                 options. */
7               } CustomCommandLineOptions;
```

About setting of default callback functions(_CWORD33_DefaultCallbackHandler)
Use _CWORD33__MAKE_DEFAULT_CALLBACK when initialize of
_CWORD33_DefaultCallbackHandler structure as argument CbHandler.
Application that run this API need to define functions below.(allow to dummy function that does nothing.)
E_CWORD33_Status _CWORD33_OnInitialization(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnPreStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnPreStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnBackgroundStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnBackgroundStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnDebugDump(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnDestroy(HANDLE hApp)
E_CWORD33_Status _CWORD33_CreateStateMachine(HANDLE hApp)
If application is resident service, link library libSS_SystemIfUnified (This library provides the function _CWORD33_SSFrameworkInterface to connect to SystemManager.).
If application is nonresident service, define function that does nothing below.
E_CWORD33_Status _CWORD33_SSFrameworkInterface(HANDLE hApp)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusDuplicate	Duplication error of entry
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size

Prerequisite

Prerequisites are nothing.

E_CWORD33_Status _CWORD33_DestroyChildThread (HANDLE *hApp*, HANDLE *hChildQ*)

Brief

Terminate child thread.

Parameters:

in	*hApp*	HANDLE - Handle for Application of parent thread
in	*hChildQ*	HANDLE - Handle for communicate with child thread(returned by _CWORD33_CreateChildThread)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusThreadNotExist	Thread is not exist
e_CWORD33_StatusThreadSelfJoin	Self thread specified

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.
Generation/Initialization of Dispatcher for the child thread
(_CWORD33_CreateChildThread, etc.) has been done.

Change of internal state

Change of internal state is depend on application implements.

_CWORD33_CreateDispatcherWithoutLoop

E_CWORD33_Status _CWORD33_DetachCallbackFromDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, UI_32 *iCmd*, HANDLE *hSession* = NULL)

Brief

API to cancel a Callback-information from the Dispatcher.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pServiceName*	PCSTR - Pointer to the service name
in	*iCmd*	UI_32 - Command ID/request ID/approval ID of protocol on the service
in	*hSession*	HANDLE - Session handle (Default:NULL)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

E_CWORD33_Status _CWORD33_DetachCallbacksFromDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, const PUI_32 *puiCmdArray*, UI_32 *uiCommandCount*, HANDLE *hSession* = NULL)

Brief

API to cancel multiple Callback-informations from the Dispatcher.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pServiceName*	PCSTR - Pointer to the service name
in	*puiCmdArray*	PUI_32 - Pointer to Command ID/request ID/approval ID of protocol on the service
in	*uiCommandCount*	UI_32 - Cancel handler count
in	*hSession*	HANDLE - Session handle (Default:NULL)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

9       CbFuncPtr onStop;                  /* Function is called when the Dispatcher is stopped.
10                  */
11      CbFuncPtr onPreStart;               /* Function is called when the Dispatcher is pre started. */
12      CbFuncPtr onPreStop;                /* Function is called when the Dispatcher is pre stoped.
*/
13      CbFuncPtr onBackgroundStart;        /* Function is called when the Dispatcher is
Background started. */
14      CbFuncPtr onBackgroundStop;         /* Function is called when the Dispatcher is
Background stopped. */
15      CbFuncPtr onDebugDump;              /* Function is called when the Dispatcher detects
16 *    abnormal state. */
17      CbFuncPtr createStateMachine;       /* Set dummy function that does nothing.
18                  */
19      CbFuncPtr ssFrameworkInterface;     /* Function to connect to SystemManager
20                  */
21  } _CWORD33_DefaultCallbackHandler;
```

CustomCommandLineOptions Structure

```
1   typedef struct _CustomCommandLineOptions
2   {
3       PCSTR       cShortOptions;      /* Short options list. */
4       PCHAR       cLongOptions;       /* Reserved. Set to NULL. */
5       CbArgumentParser callback;      /* Pointer to callback function to parse command-line
6 *     options. */
7   } CustomCommandLineOptions;
```

About setting of default callback functions(_CWORD33_DefaultCallbackHandler)
Use _CWORD33__MAKE_DEFAULT_CALLBACK when initialize of
_CWORD33_DefaultCallbackHandler structure as argument CbHandler.
Application that run this API need to define functions below.(allow to dummy function that does nothing.)
E_CWORD33_Status _CWORD33_OnInitialization(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnPreStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnPreStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnBackgroundStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnBackgroundStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnDebugDump(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnDestroy(HANDLE hApp)
E_CWORD33_Status _CWORD33_CreateStateMachine(HANDLE hApp)
If application is resident service, link library libSS_SystemIfUnified (This library provides the function _CWORD33_SSFrameworkInterface to connect to SystemManager.).
If application is nonresident service, define function that does nothing below.
E_CWORD33_Status _CWORD33_SSFrameworkInterface(HANDLE hApp)

Return values:

e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusDuplicate	Duplication error of entry
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size

Prerequisite

Prerequisites are nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

E_CWORD33_Status _CWORD33_DispatchProcessWithoutLoop (HANDLE *hApp*)

Brief

Receive request or notification, and run registered callback to dispatcher.

Parameters:

in	*hApp*	HANDLE - Handle for Application

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_CreateDispatcherWithoutLoop has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

_CWORD33_CreateDispatcherWithoutLoop, _CWORD33_DestroyDispatcherWithoutLoop, _CWORD33_GetDispatcherFD

E_CWORD33_Status _CWORD33_ForwardMessage (HANDLE *hApp*, HANDLE *hChildQ*, UI_32 *iCmd*)

_CWORD33_ForwardMessage Forward a message to a service or a client.

Parameters:

in	*hApp*	HANDLE - Handle to the service
in	*hChildQ*	HANDLE - Handle to the child thread
in	*iCmd*	UI_32 - .

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_McOpenSender, _CWORD33_McClose, _CWORD33_SendMsg, _CWORD33_GetMsgLength, _CWORD33_GetMsgSrc, _CWORD33_GetMsgDataOfSize, _CWORD33_ClearMsgData, _CWORD33_GetDataUSID, _CWORD33_GetSystemInfo

UI_32 _CWORD33_GenerateNewSessionId ()

_CWORD33_GenerateNewSessionId Used on the Server side to get the next session id

Returns:

sessionID UI_32 - session ID value

See also:

_CWORD33_OpenSession, _CWORD33_GetOpenSessionHandle, _CWORD33_CloseSession, _CWORD33_GetSessionId

HANDLE _CWORD33_GenerateSessionHandle (HANDLE *hApp*, PCSTR *pServiceName*)

_CWORD33_GenerateSessionHandle API will be called by server on receiving the Open session request to Create session

Parameters:

in	*hApp*	HANDLE - Handle to the framework application
in	*pServiceName*	PCSTR - Service Name

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_OpenSession, _CWORD33_CloseSession, _CWORD33_GenerateNewSessionId _CWORD33_GetSessionId

PCSTR _CWORD33_GetAppName (HANDLE *hApp*)

Brief

Get the application thread name that is registered with the dispatcher.

Parameters:

in	*hApp*	HANDLE - Handle for Application

Return values:

PCSTR	Pointer to application thread name
NULL	NULL pointer (Failed to get application name)

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_DispatcherWithArguments, _CWORD33_Dispatcher, _CWORD33_CreateDispatcherWithoutLoop

E_CWORD33_Status _CWORD33_GetChildThreadPriority (HANDLE *hChildApp*, PSI_32 *threadPrio*)

Brief

Get the child thread priority.

Parameters:

in	*hChildApp*	HANDLE - Handle for communicate with child thread(returned by _CWORD33_CreateChildThread)
out	*threadPrio*	PSI_32 - Dispatcher file descriptor

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusThreadNotExist	Thread is not exist
e_CWORD33_StatusFault	Error occured during function

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.
Generation/Initialization of Dispatcher for the child thread
(_CWORD33_CreateChildThread, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

_CWORD33_CreateChildThread, _CWORD33_CreateChildThreadWithPriority

HANDLE _CWORD33_GetCurrentUser (HANDLE *hApp*)

_CWORD33_GetCurrentUser Get the current user for the application

Parameters:

in	*hApp*	HANDLE - Application handle

Returns:

userhandle HANDLE - Returns current user handle

E_CWORD33_Status _CWORD33_GetDataPointer (HANDLE *hApp*, void ** *datap*)

Type

Sync

See also:

_CWORD33_McOpenSender, _CWORD33_McClose, _CWORD33_SendMsg, _CWORD33_GetMsgLength, _CWORD33_GetMsgDataOfSize, _CWORD33_ClearMsgData, _CWORD33_GetDataUSID, _CWORD33_ForwardMessage, _CWORD33_GetSystemInfo

E_CWORD33_Status _CWORD33_GetDefaultCbHandler (_CWORD33_DefaultCallbackHandler * *CbHandler*)

Brief

Get default callback handler table

Parameters:

out	*CbHandler*	_CWORD33_GetDefaultCbHandler * - Default callback handler table pointer

_CWORD33_DefaultCallbackHandler Structure

```
1   typedef struct __CWORD33_DefaultCallbackHandler
2   {
3       CbFuncPtr onInitilization;          /* Function is called when a Dispatcher is created.
4                   */
5       CbFuncPtr onDestroy;                /* Function is called when the Dispatcher is
6 *     released.           */
7       CbFuncPtr onStart;                 /* Function is called when the Dispatcher is started.
8                   */
9       CbFuncPtr onStop;                  /* Function is called when the Dispatcher is stopped.
10                  */
11      CbFuncPtr onPreStart;               /* Function is called when the Dispatcher is pre started. */
12      CbFuncPtr onPreStop;                /* Function is called when the Dispatcher is pre stoped.
*/
13      CbFuncPtr onBackgroundStart;        /* Function is called when the Dispatcher is
Background started. */
14      CbFuncPtr onBackgroundStop;         /* Function is called when the Dispatcher is
Background stopped. */
15      CbFuncPtr onDebugDump;              /* Function is called when the Dispatcher detects
16 *    abnormal state. */
17      CbFuncPtr createStateMachine;       /* Set dummy function that does nothing.
```

```
18                      */
19                  CbFuncPtr ssFrameworkInterface;         /* Function to connect to SystemManager
20                      */
21              } _CWORD33_DefaultCallbackHandler;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_CreateDispatcherWithoutLoop has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

_CWORD33_DispatchProcessWithoutLoop

UI_32 _CWORD33_GetDeferQueueCnt (HANDLE *hApp*)

_CWORD33_GetDeferQueueCnt Get the number of messages in the defer queue

Parameters:

in	*hApp*	HANDLE - Handle to the App / Thread

Returns:

count UI_32 - number of messages on Defered Queue

See also:

_CWORD33_DeferMessage, _CWORD33_RetrieveDeferMessage

E_CWORD33_Status _CWORD33_GetDispatcherFD (HANDLE *hApp*, SI_32 * *efd*)

Brief

Get the Dispatcher file descriptor corresponding to the given application handle.

Parameters:

in	*hApp*	HANDLE - Handle for Application
out	*efd*	int* - Dispatcher file descriptor

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified

e_CWORD33_StatusInvldHandle	Invalid handle

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_CreateDispatcherWithoutLoop has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

Type

Sync

See also:

_CWORD33_McOpenSender, _CWORD33_McClose, _CWORD33_SendMsg, _CWORD33_GetMsgLength, _CWORD33_GetMsgDataOfSize, _CWORD33_ClearMsgData, _CWORD33_GetDataUSID, _CWORD33_ForwardMessage, _CWORD33_GetSystemInfo

E_CWORD33_Status _CWORD33_GetLostSessionData (HANDLE *hApp*, PSTR *pServiceName*, PUI_32 *puiSessionId*)

Brief

Get last lost session data

Parameters:

in	*hApp*	HANDLE - Application framework handle
out	*pServiceName*	PSTR - Disconnect service name
out	*puiSessionId*	PUI_32 - Disconnect session ID

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid Parameter
e_CWORD33_StatusAccessError	Error when accessing resource

Preconditions

Generation/Initialization of Dispatcher for the Application by _CWORD33_CreateDispatcherWithoutLoop has been done.

Change of internal status

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

UI_32 _CWORD33_GetMsgLength (HANDLE *hApp*)

Brief

API to retrieve the data length of the received message.

Parameters:

in	*hApp*	HANDLE - Handle for Application

Return values:

UI_32	The data length of the received message
0	Error or No data

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync

See also:

None

UI_32 _CWORD33_GetMsgProtocol (HANDLE *hApp*)

Brief

API to get the Command ID/Request ID/Approval ID on the protocol.

Parameters:

in	*hApp*	HANDLE - Handle for Application

Return values:

UI_32	Command ID/Request ID/Approval ID
0	Error

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync

See also:

None

UI_32 _CWORD33_GetMsgSessionId (HANDLE *hApp*)

Brief

Get session ID from received message.

Parameters:

in	*hApp*	HANDLE - Handle for Application

Return values:

UI_32	session ID value
MAX_SESSION_ID_VAL	Failed to get session ID value

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_GetSessionHandle

UI_32 _CWORD33_GetNumberOfSession (HANDLE *hApp*, PCSTR *strServiceName*)

_CWORD33_GetNumberOfSession API to get the number of sessions created in the system.

Parameters:

in	*hApp*	HANDLE - Application handle
in	*strServiceName*	PCSTR - Service name.

Returns:

status E_CWORD33_Status - success or error

See also:

HANDLE _CWORD33_GetOpenSessionHandle (HANDLE *hApp*)

Brief

Asynchronous API to get the session handler.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application (_CWORD33_CreateDispatcherWithoutLoop() HANDLE acquired in)

Return values:

HANDLE	HANDLE for the session
NULL	Failure to HANDLE acquisition for the session

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_OpenSession, _CWORD33_OpenSessionWithData, _CWORD33_CloseSession, _CWORD33_GenerateNewSessionId, _CWORD33_GetSessionId

HANDLE _CWORD33_GetOpenSessionSyncHandle (HANDLE *hApp*, OpenSessionAck * *tAck*)

Brief

API to get the session ID without using the received data of ProtocolOpenSessionAck.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application (_CWORD33_CreateDispatcherWithoutLoop() HANDLE acquired in)
in	*tAck*	OpenSessionAck - Pointer to the OpenSessionAck structure

OpenSessionAck Structure

```
1 #define MAX_QUEUE_NAME_SIZE 20
2 typedef struct _OpenSessionAck
3 {
4     E_CWORD33_Status eStatus;                  /* Status             */
5     UI_32 sessionId;                    /* Session ID         */
6     CHAR  cSessionName[MAX_QUEUE_NAME_SIZE]; /* Session Name(20byte) */
7     UI_32 sessionType;                  /* Session Type       */
8 }OpenSessionAck;
```

Return values:

HANDLE	HANDLE for the session
NULL	Failure to HANDLE acquisition for the session

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_OpenSessionSync, _CWORD33_OpenSessionWithDataSync, _CWORD33_CloseSessionSync, _CWORD33_GenerateNewSessionId, _CWORD33_GetSessionId

PCSTR _CWORD33_GetServiceAvailabilityNotification (HANDLE *hApp*)

Brief

Base class of application

Parameters:

None	

Return values:

PCSTR	depends on the implement of derived class

Prerequisite

depends on the implement of derived class

Inside state change

depends on the implement of derived class

None

Classification

Public

Type

Sync Only

std::map<std::string, E_CWORD33_ServiceAvailableStatus>
_CWORD33_GetServiceAvailabilityTable (HANDLE *hApp*)

_CWORD33_GetServiceAvailabilityTable returns the list that stores the available services

Parameters:

in	*hApp*	HANDLE - Handle to the application session

Returns:

ServiceAvailabilityList ServiceAvailabilityTable - ServiceAvailabilityList

See also:

_CWORD33_RegisterEvent

UI_32 _CWORD33_GetSessionId (HANDLE *hSession*)

Brief

Returns the session id corresponding to the given session handle.

Parameters:

in	*hSession*	HANDLE - Handle to the session(_CWORD33_McOpenSender HANDLE acquired in)

Return values:

UI_32	session ID value
MAX_SESSION_ID_VAL	Failed to get session ID value

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_OpenSession, _CWORD33_OpenSessionSync, _CWORD33_OpenSessionWithData, _CWORD33_OpenSessionWithDataSync, _CWORD33_GetOpenSessionHandle, _CWORD33_GetOpenSessionSyncHandle, _CWORD33_GetCurrentSessionHandle, _CWORD33_McOpenSender, _CWORD33_CreateSession

E_CWORD33_Status _CWORD33_GetSystemInfo (HANDLE *hApp*, PVOID *pSystemInfo*)

_CWORD33_GetSystemInfo Gets some internal notification information

Parameters:

in	*hApp*	HANDLE - Handle to a Application Framework
in,out	*pSystemInfo*	PVOID - Buffer pointer to which system info is copied.

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_McOpenSender, _CWORD33_SendMsg, _CWORD33_GetMsgLength, _CWORD33_GetMsgSrc, _CWORD33_GetMsgDataOfSize, _CWORD33_ClearMsgData, _CWORD33_GetDataUSID, _CWORD33_ForwardMessage, _CWORD33_GetSystemInfo

PVOID _CWORD33_GetThreadSpecificData (HANDLE *hApp*)

Brief

Get pointer to the application-specific data from the application HANDLE.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application

Return values:

PVOID	pointer to application-specific data.
NULL	NULL pointer(failed to get data)

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_SetThreadSpecificData

HANDLE _CWORD33_GetXMLConfigHandle (HANDLE *hApp*)

_CWORD33_GetXMLConfigHandle Returns the handle to config file handle

Parameters:

in	*hApp*	HANDLE - Handle to the application session

Returns:

handle HANDLE - Config file handle

See also:

E_CWORD33_Status _CWORD33_InvokeSync (HANDLE *hService*, UI_32 *iCmd*, UI_32 *msgLenght*, PCVOID *msgData*, UI_32 *responseLength*, PVOID *responseData*, UI_32 * *receivedLength*)

Brief

API for synchronous communication of the message.

Parameters:

in	*hService*	HANDLE - Handle for the message queue
in	*iCmd*	UI_32 - Command ID
in	*msgLenght*	UI_32 - Data length of the send message

in	*msgData*	PCVOID - Pointer to send the message
in	*responseLength*	UI_32 - Size of the received message storage buffer
out	*responseData*	PVOID - Pointer to the received message storage buffer
out	*receivedLength*	UI_32 * - Data length of the received message

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusInvldBuf	Invalid buffer
e_CWORD33_StatusBadConnection	It can not be a socket connection
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_SendMsg

E_CWORD33_Status _CWORD33_JoinChild (HANDLE *hChildApp*)

Brief

Wait for child thread terminates.

Parameters:

in	*hChildApp*	HANDLE - Handle for communicate with child thread(returned by _CWORD33_CreateChildThread)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusThreadNotExist	Thread is not exist
e_CWORD33_StatusInvldParam	Invalid parameter

e_CWORD33_StatusThreadSelfJoin	Self thread specified
e_CWORD33_StatusFail	thread exit or invalid

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.
Generation/Initialization of Dispatcher for the child thread
(_CWORD33_CreateChildThread, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_CreateChildThread, _CWORD33_CreateChildThreadWithPriority, _CWORD33_DestroyChildThread

HANDLE _CWORD33_McOpenSender (HANDLE *hApp*, PCSTR *pName*)

Brief

Generate a handle to the message queue for sending.

Parameters:

in	*hApp*	HANDLE - Handle for Application
in	*pName*	PCSTR - Message queue name of destination service

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_McClose

E_CWORD33_Status _CWORD33_NPChangePersonality (HANDLE *hApp*, PCSTR *pUserName*)

_CWORD33_NPChangePersonality API to send message to Notification Service to set new Personality

Parameters:

in	*hApp*	HANDLE - Application Handle
in	*pUserName*	PCSTR - Name of the new Personality

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_NPRegisterPersistentFile, _CWORD33_NPLoadPersistentFile

E_CWORD33_Status _CWORD33_NPClearPersistedData (HANDLE *hApp*, E_CWORD33_ClearPersistence *e_CWORD33_ClearPersistenceScope* = e_CWORD33_ClearAllData)

Summary

API to delete all the persistent files and notification data from persistent memory related to NS_NPS. Note: This API is only to be used HMI service. This API should not be used by the other application.

Parameters:

in	*hApp*	hApp - Handle to the Framework

hApp HANDLE*

Parameters:

in	*e_CWORD33_ClearPersistenceScope*	e_CWORD33_ClearPersistenceScope - specifies what data to delete from persistent memory

e_CWORD33_ClearPersistenceScope E_CWORD33_ClearPersistence enum

```
1 typedef enum _E_CWORD33_ClearPersistence {
2   e_CWORD33_ClearAllData = ***,        ///< clears all the data in persistence memory for all users
3   ///< (currently only this enum value is supported.)
4   e_CWORD33_ClearAllApplicationData,      ///< clears all the data(files, folders) related to all application for
all
5   users
6   e_CWORD33_ClearAllNotificationData,     ///< clears all the notification data related to all application for
all users
7   e_CWORD33_ClearCurrentUserData,       ///< clears all the data in persistence memory for current users
8   e_CWORD33_ClearCurrentUserApplicationData,  ///< clears all the data(files, folders) related to all
application for
9   current users
10   e_CWORD33_ClearCurrentUserNotificationData  ///< clears all the notification data related to all
application for
11   current users
12 } E_CWORD33_ClearPersistence;
```

Return values:

E_CWORD33_Status	

e_CWORD33_StatusOK e_CWORD33_StatusNullPointer e_CWORD33_StatusInvldParam

Preconditions

Change of the internal state

The internal state is not changed.

Classification

public

Type

sync only

E_CWORD33_Status _CWORD33_NPLoadPersistentFolder (HANDLE *hApp*, PCSTR *pDstFolderPath*, PCSTR *pTag*, HANDLE *hUser* = NULL)

API to send message to Notification Service to copy folder from persistent memory to specified path. The caller recieves an acknowledgement once NPS completes folder copy

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pDstFolderPath*	PCSTR - Complete folder path to which the folder should be copied from persistent area
in	*pTag*	PCSTR - Tag associated with the folder that needs to be copied to pDstFolderPath
in	*hUser*	HANDLE - Handle for the user

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_NPRegisterPersistentFolder, _CWORD33_NPReleasePersistentFolder

E_CWORD33_Status _CWORD33_NPPersistentSync (HANDLE *hApp*)

_CWORD33_NPPersistentSync Processing which synchronizes by NPPService (syncfs)

Parameters:

in	*hApp*	HANDLE - Handle to the Framework

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPPublishNotification (HANDLE *hApp*, PCSTR *pNotification*, PCVOID *pData*, UI_32 *iLength*)

Brief

API to send message to Notification Service to notify subscribers

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pNotification*	PCSTR - A pointer to the Notification name
in	*pData*	VOID * - Data buffer pointer
in	*iLength*	UI_32 - Size of data buffer

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer size
e_CWORD33_StatusFail	Some kind of error has occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

NS_NPPService of the process has been started.
Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

_CWORD33_NPRegisterNotifications, _CWORD33_NPUnRegisterNotifications

E_CWORD33_Status _CWORD33_NPReadPersistedData (HANDLE *hApp*, PCSTR *pNotification*)

Brief

API to requested the persistent data corresponding to the notification if available

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pNotification*	PCSTR - Name of Notification

Returns:

status E_CWORD33_Status - success or error

Classification

Public

Type

Pub-Sub

See also:

none

E_CWORD33_Status _CWORD33_NPRegisterImmediatePersistNotification (HANDLE *hApp*, PCSTR *pNotification*, const UI_32 *max_length*, const UI_32 *delay*)

Brief

API to send message to Notification Service to register a immediate notification

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pNotification*	PCSTR - Name of Notification
in	*max_length*	const UI_32 - Max size of the notification message (should be <= ***Kb)
in	*delay*	const UI_32 - Min time interval between every persist (in sec)

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPRegisterNotification (HANDLE *hApp*, PCSTR *pNotification*, const UI_32 *max_length*, const E_CWORD33_NotificationType *persType*)

Brief

To the notification service to register the Notification, API to send a message.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pNotification*	PCSTR - A pointer to the Notification name
in	*max_length*	UI_32 - The maximum length of the Notification message (64byte below)
in	*persType*	

E_CWORD33_NotificationType - Type of Notification enum E_CWORD33_NotificationType Variable

E_CWORD33_Status _CWORD33_NPRegisterNotifications (HANDLE *hApp*, const _CWORD33_NotificationsList * *pList*, UI_32 *uiListLength*)

Brief

API to send a message to the notification service in order to register multiple Notification of list format.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pList*	_CWORD33_NotificationsList - Pointer to the Notification list to be registered
in	*uiListLength*	UI_32 - List length

_CWORD33_NotificationsList Structure

```
1 #define MAX_STRING_SIZE_NOTIFICATION  64
2 typedef struct __CWORD33_NotificationsList
3 {
4     CHAR cNotification[MAX_STRING_SIZE_NOTIFICATION]; /* Notification Name                */
5     UI_32 uiLengthData;                    /* Notification Name length(64byte below) */
6     E_CWORD33_NotificationType  persType;          /* Notification Type                */
7 }
```

E_CWORD33_Status _CWORD33_NPRegisterPersistentFolder (HANDLE *hApp*, PCSTR *pTag*, BOOL *bIsUserFolder* = FALSE)

API to send message to Notification Service to add a folder path to be persisted

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pTag*	PCSTR - A unique identifier for the folder path specified, this is used in retrieve/Load the folder later
in	*bIsUserFolder*	BOOL - set TRUE if want to register a folder for user.

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_NPLoadPersistentFolder, _CWORD33_NPReleasePersistentFolder

E_CWORD33_Status _CWORD33_NPReleasePersistentFile (HANDLE *hApp*, BOOL *bIsPersist*, PCSTR *pTag*, PCSTR *pFullFilePath*, HANDLE *hUser* = NULL)

Brief

API to send message to Notification Service to notify that the file can be persisted.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*bIsPersist*	BOOL - If the specified file needs to be persisted or not on release
in	*pTag*	PCSTR - Tag associated with the file released
in	*pFullFilePath*	PCSTR - Full path name of the file to be persisted
in	*hUser*	HANDLE - Handle for the user

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPReleasePersistentFolder (HANDLE *hApp*, BOOL *bIsPersist*, PCSTR *pTag*, PCSTR *pFullFolderPath*, HANDLE *hUser* = NULL)

_CWORD33_NPReleasePersistentFolder API to send message to Notification Service to notify that the folder can be persisted.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*bIsPersist*	BOOL - If the specified folder needs to be persisted or not on release
in	*pTag*	PCSTR - Tag associated with the folder released
in	*pFullFolderPath*	PCSTR - Full path name of the folder to be persisted
in	*hUser*	HANDLE - Handle for the user

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_NPRegisterPersistentFolder, _CWORD33_NPLoadPersistentFolder

E_CWORD33_Status _CWORD33_NPReleasePersistentFolder (HANDLE *hApp*, E_CWORD33_ReleaseType *e_CWORD33_ReleaseType*, PCSTR *pTag*, PCSTR *pFullFolderPath*, HANDLE *hUser* = NULL)

_CWORD33_NPReleasePersistentFolder API to send message to Notification Service to notify that the folder can be persisted.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*e_CWORD33_ReleaseType*	E_CWORD33_ReleaseType - e_CWORD33_NotOnRelease :not on release e_CWORD33_PersistOnShutdown:persist on shutdown e_CWORD33_PersistInstantly :persist instantly
in	*pTag*	PCSTR - Tag associated with the folder released
in	*pFullFolderPath*	PCSTR - Full path name of the folder to be persisted
in	*hUser*	HANDLE - Handle for the user

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_NPRegisterPersistentFolder, _CWORD33_NPLoadPersistentFolder

E_CWORD33_Status _CWORD33_NPSetFilePersistentType (HANDLE *hApp*, PCSTR *pTag*, E_CWORD33_PersistCategory *ePersistCategory*)

_CWORD33_NPSetFilePersistentType API to send message to Notification Service to set persistent file category.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework

in	*pTag*	PCSTR - File tag
in	*ePersistCategory*	E_CWORD33_PersistCategory - Persistent category

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPSetFolderPersistentType (HANDLE *hApp*, PCSTR *pTag*, E_CWORD33_PersistCategory *ePersistCategory*)

_CWORD33_NPSetFolderPersistentType API to send message to Notification Service to set persistent folder category.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pTag*	PCSTR - A unique identifier for the folder path specified, this is used in retrieve/Load the folder later
in	*ePersistCategory*	E_CWORD33_PersistCategory - Persistent category

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPSetPersistentNotfnType (HANDLE *hApp*, PCSTR *pNotification*, E_CWORD33_PersistCategory *ePersistCategory*)

Brief

API to send message to Notification Service to set persistent notification category.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pNotification*	PCSTR - Name of Notification
in	*ePersistCategory*	E_CWORD33_PersistCategory - Persistent Category

Returns:

status E_CWORD33_Status - success or error

Classification

Public

Type

Pub-Sub

See also:

none

E_CWORD33_Status _CWORD33_NPSetPersistNotfnDefaultValue (HANDLE *hApp*, PCSTR *pNotification*, PVOID *data*, const UI_32 *uiLength*)

_CWORD33_NPSetPersistNotfnDefaultValue API to send message to Notification Service to set the default value for the notification.

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pNotification*	PCSTR - Name of Notification
in	*data*	PVOID - Set the default value for the notification.
in	*uiLength*	const UI_32 - length of the data

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPSetPersonality (HANDLE *hApp*, PCSTR *pUserName*)

_CWORD33_NPSetPersonality API to send message to Notification Service to set Personality

Parameters:

in	*hApp*	HANDLE - Application Handle
in	*pUserName*	PCSTR - Name of the new Personality

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_NPRegisterPersistentFile, _CWORD33_NPLoadPersistentFile

E_CWORD33_Status _CWORD33_NPUnRegisterNotification (HANDLE *hApp*, PCSTR *pNotification*)

Brief

API to send message to Notification Service to remove a notification.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pNotification*	PCSTR - A pointer to the Notification name

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred

e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

NS_NPPService of the process has been started.
Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

E_CWORD33_Status _CWORD33_NPUnRegisterNotifications (HANDLE *hApp*, const _CWORD33_NotificationsList * *pList*, UI_32 *uiListLength*)

Brief

API to send message to Notification Service to delete a notification.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pList*	_CWORD33_NotificationsList - Pointer to the Notification list that you want to delete
in	*uiListLength*	UI_32 - List length

_CWORD33_NotificationsList Structure

HANDLE _CWORD33_OpenService (HANDLE *hApp*, PCSTR *pServiceName*)

Brief

API to acquire a service HANDLE.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pServiceName*	PCSTR - Pointer to service name

Return values:

HANDLE	Handle to the service
NULL	NULL pointer (Failed to get service handle)

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.
Only when will open the session by _CWORD33_OpenSession, you can use the handle obtained by this API.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_CloseService, _CWORD33_OpenSession

E_CWORD33_Status _CWORD33_OpenSession (HANDLE *hService*)

Brief

API sends a message to the service requesting a session.

Parameters:

in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService HANDLE acquired in)

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

E_CWORD33_Status _CWORD33_OpenSessionSync (HANDLE *hService*, OpenSessionAck * *ack*)

Brief

Synchronous API of sending a message of the session request to the service.

Parameters:

in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService/_CWORD33_GetOpenSessionHandle/ _CWORD33_GetOpenSessionSyncHandle HANDLE acquired in)
out	*ack*	OpenSessionAck - Pointer to the response data of the session initiation

OpenSessionAck Structure

```
1 #define MAX_QUEUE_NAME_SIZE 20
2 typedef struct _OpenSessionAck
3 {
4     E_CWORD33_Status eStatus;                  /* Status              */
5     UI_32 sessionId;                  /* Session ID          */
6     CHAR  cSessionName[MAX_QUEUE_NAME_SIZE]; /* Session Name(20byte)  */
7     UI_32 sessionType;                 /* Session Type        */
8 }OpenSessionAck;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusBadConnection	It can not be a socket connection
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared

	memory, etc.)

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

E_CWORD33_Status _CWORD33_OpenSessionWithData (HANDLE *hService*, PVOID *pData*, UI_32 *length*)

Brief

API to send to service the message of the session request together with the data.

Parameters:

in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService HANDLE acquired in)
in	*pData*	PVOID - Pointer to the session data for transmission
in	*length*	UI_32 - Size of the session data for transmission

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldBuf	Invalid buffer
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

E_CWORD33_Status _CWORD33_OpenSessionWithDataSync (HANDLE *hService*, PVOID *pData*, UI_32 *length*, OpenSessionAck * *ack*)

Brief

Synchronous API that transmits to the service a message session request with the data.

Parameters:

in	*hService*	HANDLE - Handle to the service(_CWORD33_OpenService/_CWORD33_GetOpenSessionHandle/ _CWORD33_GetOpenSessionSyncHandle HANDLE acquired in)
in	*pData*	PVOID -
in	*length*	UI_32 -
out	*ack*	OpenSessionAck - Pointer to the response data of the session initiation

OpenSessionAck Structure

```
1 #define MAX_QUEUE_NAME_SIZE 20
2 typedef struct _OpenSessionAck
3 {
4     E_CWORD33_Status eStatus;                  /* Status              */
5     UI_32 sessionId;                  /* Session ID          */
6     CHAR  cSessionName[MAX_QUEUE_NAME_SIZE]; /* Session Name(20byte)  */
7     UI_32 sessionType;                 /* Session Type        */
8 }OpenSessionAck;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldBuf	Invalid Buffer
e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred

e_CWORD33_StatusBadConnection	It can not be a socket connection
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

E_CWORD33_Status _CWORD33_RemoveAppData (HANDLE *hApp*, PCSTR *pKey*)

_CWORD33_RemoveAppData This API removes the data stored against a key in application framework.

Parameters:

in	*hApp*	HANDLE - Application handle
in	*pKey*	PSTR - Data key

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_SetAppData, _CWORD33_GetAppData

E_CWORD33_Status _CWORD33_SendChild (HANDLE *hApp*, HANDLE *hChildQ*, UI_32 *iCmd*, UI_32 *length*, PCVOID *data*)

Brief

Send a message to the child thread.

Parameters:

in	*hApp*	HANDLE - Handle for Application of parent thread
in	*hChildQ*	HANDLE - Handle for communicate with child thread(returned by _CWORD33_CreateChildThread)
in	*iCmd*	UI_32 - Command of message
in	*length*	UI_32 - Length of send message data
in	*data*	PCVOID - Pointer to message data

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldBuf	Invalid buffer
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.
Generation/Initialization of Dispatcher for the child thread
(_CWORD33_CreateChildThread, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

CWORD33_SendParent

E_CWORD33_Status _CWORD33_SendParent (HANDLE *hChildApp*, UI_32 *iCmd*, UI_32 *length*, PCVOID *data*)

Brief

Send a message to the parent thread.

Parameters:

in	*hChildApp*	HANDLE - Handle for Application of child thread(get as argument of callback function)
in	*iCmd*	UI_32 - Command of message
in	*length*	UI_32 - Length of send message data
in	*data*	PCVOID - Pointer to message data

Return values:

e_CWORD33_StatusOK	Success

e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldBuf	Invalid buffer
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusInvldHndlType	Invalid type of handle

_CWORD33_SendChild

E_CWORD33_Status _CWORD33_SendPriorityMsg (HANDLE *hService*, UI_32 *uiCmd*, UI_32 *uiLength*, PCVOID *pData*)

_CWORD33_SendPriorityMsg Send message to a service. It places your message at the top of the services message queue. **Applications** should not use this unless absolutely required - use cases must be reviewed by **Framework** Team.

Parameters:

in	*hService*	HANDLE - Handle to the service.
in	*uiCmd*	UI_32 - Protocol message id.
in	*uiLength*	UI_32 - Length of the data to be send.
in	*pData*	PVOID - Pointer to the data.

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_McOpenSender, _CWORD33_McClose, _CWORD33_GetMsgLength, _CWORD33_GetMsgSrc, _CWORD33_GetMsgDataOfSize, _CWORD33_ClearMsgData, _CWORD33_GetDataUSID, _CWORD33_ForwardMessage, _CWORD33_GetSystemInfo

E_CWORD33_Status _CWORD33_SendRequest (HANDLE *hApp*, PCSTR *pServerName*, UI_32 *uiSessionId*, UI_32 *iCmd*, UI_32 *length*, PCVOID *data*)

_CWORD33_SendRequest This API retrieves the session handle from the application framework and sends the request to the server with specific service name and session id. This API will work, if application has previously stored associated session handle using _CWORD33_SetSessionHandle.

Parameters:

in	*hApp*	HANDLE - Application handle
in	*pServerName*	PCSTR - Name of the server
in	*uiSessionId*	UI_32 - session id
in	*iCmd*	UI_32 - Protocol command
in	*length*	UI_32 - size of message data
in	*data*	PCVOID - message data

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_SetSessionHandle, _CWORD33_SendResponse

Type

Pub-Sub

E_CWORD33_Status _CWORD33_SetDeferredSyncResponse (HANDLE *hApp*)

_CWORD33_SetDeferredSyncResponse Set sync response deferred flag

Parameters:

in	*hApp*	HANDLE - Handle to the dispatcher to receive message

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_SetSyncResponseData (HANDLE *hApp*, PVOID *data*, UI_32 *size*)

Brief

API to set the response data of the synchronization communication.

Parameters:

in	*hApp*	HANDLE - Handle for Application
in	*data*	PVOID - Pointer to the response data
in	*size*	UI_32 - The response data size

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	NULL pointer specified

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_InvokeSync

E_CWORD33_Status _CWORD33_SetThreadSpecificData (HANDLE *hApp*, PVOID *data*)

Brief

Set pointer to the application-specific data to the application HANDLE.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*data*	PVOID - Pointer to the application-specific data

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

See also:

_CWORD33_GetThreadSpecificData

E_CWORD33_Status _CWORD33_SetUser (HANDLE *hApp*, HANDLE *hUser*)

_CWORD33_SetUser Set the current user for the application in application framework

Parameters:

in	*hApp*	HANDLE - Application handle
in	*hUser*	HANDLE - User handle

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_SimpleDispatcher (PCSTR *cAppName*, const _CWORD33_DefaultCallbackHandler * *CbHandler*, CbFuncPtr *CbShutdown*, BOOL *isChildThread* = TRUE)

Brief

Parameters:

in	*cAppName*	PCSTR - Application/ thread name
in	*CbHandler*	const _CWORD33_DefaultCallbackHandler* - Function that primes the dispatch pump. i.e. start function
in	*CbShutdown*	CbFuncPtr * - Shutdown function. Functions gets called if the dispatcher loop exits.
in	*isChildThread*	BOOL - Default value is TRUE. TRUE - child thread dispatcher else main thread dispatcher

Return values:

Never	does. Unless any callback function returns e_CWORD33_StatusExit
e_CWORD33_StatusNullPointer	NULL pointer
e_CWORD33_StatusFail	Invalid Parameter
e_CWORD33_StatusErrOther	Unknown Error

Prerequisite

Change of internal state

Classification

Type

No match

See also:

_CWORD33_DispatcherWithArguments

E_CWORD33_Status _CWORD33_StartChildThread (HANDLE *hApp*, HANDLE *hChildQ*, UI_32 *length*, PCVOID *data*)

Brief

Send initialize request to the child thread.

Parameters:

in	*hApp*	HANDLE - Handle for Application of parent thread
in	*hChildQ*	HANDLE - Handle for communicate with child thread(returned by _CWORD33_CreateChildThread)
in	*length*	UI_32 - Length of send message data
in	*data*	PCVOID - Pointer to message data

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldBuf	Invalid buffer
e_CWORD33_StatusInvldQName	Illegal Message Queue name
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred

Prerequisite

Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.
Generation/Initialization of Dispatcher for the child thread
(_CWORD33_CreateChildThread, etc.) has been done.

Change of internal state

Change of internal state is depend on application implements.

E_CWORD33_Status _CWORD33_SubscribeNotificationsWithCallback (HANDLE *hApp*, const _CWORD33_NotificationCallbackHandler * *pNtfyHandler*, UI_32 *uiHandlerCount*)

Brief

API to send a message to the notification service in order to register multiple Notification of list format.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pNtfyHandler*	_CWORD33_NotificationCallbackHandler - Pointer to a structure of the Notification Handler
in	*uiHandlerCount*	UI_32 - Notification Handler number

_CWORD33_NotificationCallbackHandler Structure

```
1 #define MAX_STRING_SIZE_NOTIFICATION  64
2 typedef struct __CWORD33_NotificationCallbackHandler
3 {
4       CHAR cNotification[MAX_STRING_SIZE_NOTIFICATION]; /* Notification Name         */
5       CbFuncPtr callBack;                          /* Callback function pointer  */
6 }_CWORD33_NotificationCallbackHandler;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

NS_NPPService of the process has been started.
Generation/Initialization of Dispatcher for the Application
(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of internal state

Change of internal state according to the API does not occur.

E_CWORD33_Status _CWORD33_SubscribeNotificationWithCallback (HANDLE *hApp*, PCSTR *pNotification*, CbFuncPtr *fpOnCmd*)

Brief

API to set the Callback information at the time of Notification received Dispatcher.

Parameters:

in	*hApp*	HANDLE - Application handle
in	*pNotification*	PCSTR - Notification String.
in	*fpOnCmd*	CbFuncPtr - Callback function that will be called on receiving pNotification.

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusDuplicate	Duplication error of entry
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

E_CWORD33_Status _CWORD33_UnsubscribeNotificationsWithCallback (HANDLE *hApp*, const _CWORD33_NotificationCallbackHandler * *pNtfyHandler*, UI_32 *uiHandlerCount*)

Brief

API to bulk delete the Callback information at the time of multiple Notification received from the Dispatcher.

Parameters:

in	*hApp*	HANDLE - HANDLE for Application
in	*pNtfyHandler*	_CWORD33_NotificationCallbackHandler - Pointer to a structure of the Notification Handler
in	*uiHandlerCount*	UI_32 - Notification Handler number

_CWORD33_NotificationCallbackHandler Structure

```
1 #define MAX_STRING_SIZE_NOTIFICATION  64
2 typedef struct __CWORD33_NotificationCallbackHandler
3 {
4       CHAR cNotification[MAX_STRING_SIZE_NOTIFICATION]; /* Notification Name         */
5       CbFuncPtr callBack;                          /* Callback function pointer  */
6 }_CWORD33_NotificationCallbackHandler;
```

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusInvldHndlType	Invalid type of handle
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)

Prerequisite

NS_NPPService of the process has been started.

public: \
C## class_name(); \
virtual ~C## class_name(); \
E_CWORD33_Status _CWORD33_Create(PVOID f_pEventData = NULL); \
};

Defines the state machine class.

Function Documentation

E_CWORD33_Status _CWORD33_AttachHSMEventsToDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, const _CWORD33_ProtocolEvent * *pEventIds*, UI_32 *uiEventCount*, HANDLE *hSession* = NULL)

Brief

Register events in dispatcher.

Parameters:

in	*hApp*	HANDLE hApp - Application framework handle
in	*pServiceName*	PCSTR pServiceName - Service Name
in	*pEventIds*	const _CWORD33_ProtocolEvent *pEventIds - structure mapping event ids with the messages
in	*uiEventCount*	UI_32 uiEventCount - no of events
in	*hSession*	HANDLE hSession - Session Handle.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_HSMDispatcherWithArguments has been done.

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_AttachHSMEventToDispatcher

_CWORD33_AttachHSMEventsToDispatcher Registers a multiple event with the dispatcher for a given service.

Parameters:

in	*hApp*	HANDLE - Application framework handle
in	*pServiceName*	PCSTR - Service Name
in	*pEventIds*	const _CWORD33_ProtocolEvent* - structure mapping event ids with the messages
in	*uiEventCount*	UI_32 - no of events
in	*hSession*	HANDLE - Session Handle.

Returns:

status E_CWORD33_Status - success or error

See also:

E_CWORD33_Status _CWORD33_AttachHSMEventToDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, UI_32 *iCmd*, UI_32 *iEvent*, HANDLE *hSession* = NULL)

Brief

Register an event in dispatcher

Parameters:

in	*hApp*	HANDLE hApp - Application framework handle
in	*pServiceName*	PCSTR pServiceName - Service Name
in	*iCmd*	UI_32 iCmd - service protocol command/request/acknowledgment ID
in	*iEvent*	UI_32 iEvent - event to be posted to active state on receiving iCmd from pServiceName.
in	*hSession*	HANDLE hSession - Session Handle.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_HSMDispatcherWithArguments has been done.

Change of internal state

None

Classification

Public

Type

sync only

_CWORD33_AttachHSMEventsToDispatcher

_CWORD33_AttachHSMEventToDispatcher Registers a single event with the dispatcher for a given service.

Parameters:

in	*hApp*	HANDLE - Application framework handle
in	*pServiceName*	PCSTR - Service Name
in	*iCmd*	UI_32 - service protocol command/request/acknowledgment ID
in	*iEvent*	UI_32 - event to be posted to active state on receiving iCmd from pServiceName.
in	*hSession*	HANDLE - Session Handle.

Returns:

status E_CWORD33_Status - success or error

See also:

E_CWORD33_Status _CWORD33_AttachParentHSMEventsToDispatcher (HANDLE *hChildApp*, const _CWORD33_ProtocolEvent * *pEventIds*, UI_32 *uiEventCount*)

Brief

Registers a multiple HSM event with the dispatcher for a given service.

Parameters:

in	*hApp*	HANDLE hApp - Child Thread handle
in	*pEventIds*	const _CWORD33_ProtocolEvent *pEventIds - structure mapping event ids with the messages
in	*uiEventCount*	UI_32 uiEventCount - no of events

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_AttachParentHSMEventsToDispatcher Registers a multiple HSM event with the dispatcher for a given service.

Parameters:

in	*hChildApp*	HANDLE - Application framework handle
in	*pEventIds*	const _CWORD33_ProtocolEvent* - structure mapping event ids with the messages
in	*uiEventCount*	UI_32 - no of events

Returns:

status E_CWORD33_Status - success or error

See also:

HANDLE _CWORD33_CreateHSMChildThread (HANDLE *hApp*, PCSTR *childName*, CbFuncPtr *CbInitialize*, CbFuncPtr *CbShutdown*, CbFuncPtr *CbCreateStateMachine*)

Brief

Start a subordinate dispatcher in a separate thread

Parameters:

in	*hApp*	HANDLE - parent framework HANDLE
in	*childName*	PCSTR - Name to give to the child object
in	*CbInitialize*	CbFuncPtr - Initialization callback - use this to initialize and configure the child's dispatcher.
in	*CbShutdown*	CbFuncPtr - Shutdown callback - use this to shutdown and close the child The correct way for child to exit dispatch loop is to return e_CWORD33_StatusExit directly from this callback, or from some other interaction triggered by this callback
in	*CbCreateStateMachine*	CbFuncPtr - StateMachine callback - use this to add new states, events and reactions in the Thread statemachine.

Return values:

HANDLE	create thread with Priority success
NULL	create thread with Priority failed

Preconditions

Generation/Initialization of Dispatcher for the Application (_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

HANDLE _CWORD33_CreateHSMChildThreadWithAttribute (HANDLE *hApp*, PCSTR *childName*, CbFuncPtr *CbInitialize*, CbFuncPtr *CbShutdown*, CbFuncPtr *CbCreateStateMachine*, const _CWORD33_ChildThreadAttr * *attr*)

Summary

Start a subordinate dispatcher in a separate thread with given attribute

Parameters:

in	*hApp*	HANDLE - parent framework HANDLE
in	*childName*	PCSTR - Name to give to the child object
in	*CbInitialize*	CbFuncPtr - Initialization callback - use this to initialize and configure the child's dispatcher.
in	*CbShutdown*	CbFuncPtr - Shutdown callback - use this to shutdown and close the child The correct way for child to exit dispatch loop is to return e_CWORD33_StatusExit directly from this callback, or from some other interaction triggered by this callback
in	*CbCreateStateMachine*	CbFuncPtr - StateMachine callback - use this to add new states, events and reactions in the Thread statemachine.
in	*attr*	const _CWORD33_ChildThreadAttr * - given attribute to create thread

Return values:

HANDLE	create thread with Priority success
NULL	create thread with Priority failed

Preconditions - Generation/Initialization of Dispatcher for the Application

(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

HANDLE _CWORD33_CreateHSMChildThreadWithPriority (HANDLE *hApp*, PCSTR *childName*, CbFuncPtr *CbInitialize*, CbFuncPtr *CbShutdown*, CbFuncPtr *CbCreateStateMachine*, SI_32 *schedPrio*)

Summary

Start a subordinate dispatcher in a separate thread with given Priority

Parameters:

in	*hApp*	HANDLE - parent framework HANDLE
in	*childName*	PCSTR - Name to give to the child object
in	*CbInitialize*	CbFuncPtr - Initialization callback - use this to initialize and configure the child's dispatcher.
in	*CbShutdown*	CbFuncPtr - Shutdown callback - use this to shutdown and close the child The correct way for child to exit

		dispatch loop is to return e_CWORD33_StatusExit directly from this callback, or from some other interaction triggered by this callback
in	*CbCreateStateMachine*	CbFuncPtr - StateMachine callback - use this to add new states, events and reactions in the Thread statemachine.
in	*schedPrio*	SI_32 - given Priority for create thread

Return values:

HANDLE	create thread with Priority success
NULL	create thread with Priority failed

Preconditions - Generation/Initialization of Dispatcher for the Application

(_CWORD33_CreateDispatcherWithoutLoop, etc.) has been done.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

E_CWORD33_Status _CWORD33_CreateStateMachine (HANDLE *hApp*)

_CWORD33_CreateStateMachine The application state machine is created in this interface. User defined events can also be connected to the framework states in this interface.

Brief

It's a callback function to create state machine used by application.

Parameters:

in	*hApp*	HANDLE - handle to application

Return values:

e_CWORD33_StatusOK	-successed
Except	e_CWORD33_StatusOK - failure

Prerequisite

None

Inside state change

None

Classification

Public

See also:

_CWORD33_DispatcherWithArguments, _CWORD33_Dispatcher, _CWORD33_CreateDispatcherWithoutLoop

E_CWORD33_Status _CWORD33_DetachHSMEventFromDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, UI_32 *iCmd*, HANDLE *hSession* = NULL)

Brief

detach an event from the dispatcher

Parameters:

in	*hApp*	HANDLE hApp - Application framework handle
in	*pServiceName*	PCSTR pServiceName - Service Name
in	*iCmd*	UI_32 iCmd - service protocol command/request/acknowledgment ID
in	*hSession*	HANDLE hSession - Session Handle.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle
e_CWORD33_StatusFail	process failed

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_HSMDispatcherWithArguments has been done.

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_DetachHSMEventsFromDispatcher

_CWORD33_DetachHSMEventFromDispatcher API to detach a notification HSM event from the dispatcher.

Parameters:

in	*hApp*	HANDLE - Application framework handle
in	*pServiceName*	PCSTR - Service Name
in	*iCmd*	UI_32 - service protocol command/request/acknowledgment ID

in	*hSession*	HANDLE - Session Handle.

Returns:

status E_CWORD33_Status - success or error

See also:

E_CWORD33_Status _CWORD33_DetachHSMEventsFromDispatcher (HANDLE *hApp*, PCSTR *pServiceName*, const PUI_32 *puiCmdArray*, UI_32 *uiCmdCount*, HANDLE *hSession* = NULL)

Brief

detach multiple events from the dispatcher

Parameters:

in	*hApp*	HANDLE hApp - Application framework handle
in	*pServiceName*	PCSTR pServiceName - Service Name
in	*puiCmdArray*	const PUI_32 puiCmdArray - Array of commands
in	*uiCmdCount*	UI_32 uiCmdCount - Number of Commands
in	*hSession*	HANDLE hSession - Session Handle.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle
e_CWORD33_StatusFail	process failed
e_CWORD33_StatusInvldParam	invalid parameter

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_HSMDispatcherWithArguments has been done.

Change of internal state

None

Classification

Public

Type

sync only

_CWORD33_DetachHSMEventFromDispatcher

_CWORD33_DetachHSMEventsFromDispatcher API to detach a notification HSM event from the dispatcher.

Parameters:

in	*hApp*	HANDLE - Application framework handle
in	*pServiceName*	PCSTR - Service Name
in	*puiCmdArray*	const PUI_32 - Array of commands

in	*uiCmdCount*	UI_32 - Number of Commands
in	*hSession*	HANDLE - Session Handle.

Returns:

status E_CWORD33_Status - success or error

See also:

E_CWORD33_Status _CWORD33_DetachParentHSMEventsFromDispatcher (HANDLE *hChildApp*, const PUI_32 *puiEventArray*, UI_32 *uiEventCount*)

Brief

detach notification HSM events from the dispatcher.

Parameters:

in	*hApp*	HANDLE hApp - Child Thread handle
in	*puiEventArray*	const PUI_32 puiEventArray - Array of events
in	*uiEventCount*	UI_32 uiEventCount - Number of events

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_DetachParentHSMEventsFromDispatcher API to detach a notification HSM event from the dispatcher.

Parameters:

in	*hChildApp*	HANDLE - Child Thread handle
in	*puiEventArray*	const PUI_32 puiEventArray - Array of events
in	*uiEventCount*	UI_32 - Number of events

Returns:

status E_CWORD33_Status - success or error

See also:

void _CWORD33_DisableAutoPublishServiceAvailable ()

Brief

Disable to the AutoPublishServiceAvailability Feature.

Return values:

None	

Prerequisite

Prerequisite is nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Forbidden

See also:

_CWORD33_HSMDispatcherWithArguments _CWORD33_PublishServiceAvailability

_CWORD33_DisableAutoPublishServiceAvailable Disables the AutoPublishServiceAvailability Feature that publishes the service availability on entry of s_CWORD33_Ready state and publishes the service unavailability on exit of s_CWORD33_Ready state. Applications are responsible for publishing the service availability.

void _CWORD33_EnableAutoPublishServiceAvailable ()

Brief

Enables the AutoPublishServiceAvailability Feature

Parameters:

none	

Return values:

E_CWORD33_Status	

Prerequisite

Prerequisites are nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

none

See also:

C_CWORD33_HSMFramework* _CWORD33_GetStateMachine (HANDLE *hApp*)

Brief

Get pointer to the statemachine object.

Parameters:

in	*hApp*	HANDLE - Handle to the framework application

Return values:

*C_CWORD33_HSMParentFramework**	pointer to the statemachine object
NULL	Failed to get pointer to the statemachine object

Prerequisite

Generation/Initialization of Dispatcher for the Application by _CWORD33_HSMDispatcherWithArguments has been done.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

_CWORD33_HSMDispatcherWithArguments, _CWORD33_SetStateMachine

_CWORD33_GetStateMachine returns the pointer to the statemachine object

Parameters:

in	*hApp*	HANDLE - Handle to the application session

Returns:

pointer to the StateMachine object C_CWORD33_HSMParentFramework* - pointer to the StateMachine object

See also:

VOID _CWORD33_HSMDisableWaitInStoppingState ()

Brief

Chanage state to not wait in sStoppingState.

Return values:

None	

Prerequisite

Prerequisite is nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

none

See also:

_CWORD33_HSMEnableWaitInStoppingState

E_CWORD33_Status _CWORD33_HSMDispatcher (PCSTR *cAppName*)

Brief

Creates, initializes and runs the HSM dispatcher.

Parameters:

in	*cAppName*	PCSTR - pointer of Application/ thread name

Return values:

E_CWORD33_Status	

Prerequisite

Prerequisites are nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

none

See also:

E_CWORD33_Status _CWORD33_HSMDispatcherWithArguments (PCSTR *cAppName*, int *argc*, char * *argv*[], const _CWORD33_DefaultCallbackHandler * *CbHandler*, C_CWORD33_HSMFramework * *f_p_CWORD33_HSM* = NULL, CustomCommandLineOptions * *cmdLineOptions* = NULL)

Brief

This API creates, initializes the dispatcher and runs loop with command-line options.

Parameters:

in	*cAppName*	PCSTR - Pointer to application thread name
in	*argc*	int - Number of command-line options
in	*argv*	char *[] - Array of pointer to command-line options
in	*CbHandler*	const _CWORD33_DefaultCallbackHandler* - Pointer to default callback functions.
in	*f_p_CWORD33_HSM*	C_CWORD33_HSMFramework* - state machine object pointer(default NULL)
in	*cmdLineOptions*	CustomCommandLineOptions* - Parser setting of command-line options(Optional. When don't use, set NULL.)

_CWORD33_DefaultCallbackHandler Structure

```
1 typedef struct __CWORD33_DefaultCallbackHandler
2 {
3     CbFuncPtr onInitilization;     /* Function is called when a Dispatcher is created.     */
4     CbFuncPtr onDestroy;           /* Function is called when the Dispatcher is released.  */
5     CbFuncPtr onStart;             /* Function is called when the Dispatcher is started.   */
6     CbFuncPtr onStop;              /* Function is called when the Dispatcher is stopped.   */
7     CbFuncPtr onPreStart;          /* Function is called when the Dispatcher is pre started. */
8     CbFuncPtr onPreStop;           /* Function is called when the Dispatcher is pre stoped. */
9     CbFuncPtr onBackgroundStart;   /* Function is called when the Dispatcher is Background started. */
10    CbFuncPtr onBackgroundStop;    /* Function is called when the Dispatcher is Background stopped. */
11    CbFuncPtr onDebugDump;  /* Function is called when the Dispatcher detects abnormal state. */
12    CbFuncPtr createStateMachine;     /* Set dummy function that does nothing.              */
13    CbFuncPtr ssFrameworkInterface;   /* Function to connect to SystemManager               */
14 } _CWORD33_DefaultCallbackHandler;
```

CustomCommandLineOptions Structure

```
1 typedef struct _CustomCommandLineOptions
2 {
3   PCSTR          cShortOptions;        /* Short options list. */
4   PCHAR          cLongOptions;         /* Reserved. Set to NULL. */
5   CbArgumentParser callback;  /* Pointer to callback function to parse command-line options. */
6 } CustomCommandLineOptions;
```

About setting of default callback functions(_CWORD33_DefaultCallbackHandler)
Use _CWORD33__MAKE_DEFAULT_CALLBACK when initialize of
_CWORD33_DefaultCallbackHandler structure as argument CbHandler.

Application that run this API need to define functions below.(allow to dummy function that does nothing.)

E_CWORD33_Status _CWORD33_OnInitialization(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnPreStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnPreStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnBackgroundStart(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnBackgroundStop(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnDebugDump(HANDLE hApp)
E_CWORD33_Status _CWORD33_OnDestroy(HANDLE hApp)
E_CWORD33_Status _CWORD33_CreateStateMachine(HANDLE hApp)

If application is resident service, link library libSS_SystemIfUnified (This library provides the function _CWORD33_SSFrameworkInterface to connect to SystemManager.).

If application is nonresident service, define function that does nothing below.

E_CWORD33_Status _CWORD33_SSFrameworkInterface(HANDLE hApp)

Return values:

e_CWORD33_StatusNullPointer	NULL pointer specified
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusFail	Some sort of error occurred
e_CWORD33_StatusDuplicate	Duplication error of entry
e_CWORD33_StatusInvldHandle	Invalid handle
e_CWORD33_StatusErrOther	Other error has occurred(Cannot access shared memory, etc.)
e_CWORD33_StatusMsgQFull	Message queue is full
e_CWORD33_StatusErrNoEBADF	Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	Invalid buffer-size

Prerequisite

Prerequisites are nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

none

VOID _CWORD33_HSMEnableWaitInStoppingState ()

Brief

Change state application when call _CWORD33_OnStop().

Return values:

None	

Prerequisite

Prerequisite is nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

none

See also:

_CWORD33_HSMDisableWaitInStoppingState

E_CWORD33_Status _CWORD33_HSMOnLoadData (HANDLE *hApp*)

All the persistent data of the applications should be loaded in this function.

Brief

This function defines loading persistent data of HSM application.

Parameters:

in	*hApp*	HANDLE - handle to application

Return values:

e_CWORD33_StatusOK	-successed
Except	e_CWORD33_StatusOK - failure

Prerequisite

None

Inside state change

None

Classification

Private

Type

None

See also:

None

E_CWORD33_Status _CWORD33_HSMOnStopIns_CWORD33_Run (HANDLE *hApp*)

Send stop request to all the child threads.

Brief

This function defines sending stop request to the child threads of HSM application.

Parameters:

in	*hApp*	HANDLE - handle to application

Return values:

e_CWORD33_StatusOK	-successed
Except	e_CWORD33_StatusOK - failure

Prerequisite

None

Inside state change

None

Classification

Private

Type

None

See also:

None

E_CWORD33_Status _CWORD33_NPHSMRegisterNotificationsEvents (HANDLE *hApp*, const _CWORD33_NotificationsList * *pList*, UI_32 *uiListLength*)

Brief

register many notifications in service

Parameters:

in	*hApp*	HANDLE hApp - Handle to the Framework
in	*pList*	const _CWORD33_NotificationsList *pList - List of the notifications that need to be registered
in	*uiListLength*	UI_32 uiListLength - Length of the list

Return values:

e_CWORD33_StatusOK	success

e_CWORD33_StatusInvldHandle	invalid state handle

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_NPHSMRegisterNotificationsEvents API to send message to Notification Service to register a notification

Parameters:

in	*hApp*	HANDLE - Handle to the Framework
in	*pList*	_CWORD33_NotificationsList - List of the notifications that need to be registered
in	*uiListLength*	const UI_32 - Length of the list

Returns:

status E_CWORD33_Status - success or error

E_CWORD33_Status _CWORD33_NPHSMRegisterNotificatsionEvent (HANDLE *hApp*, PCSTR *pNotification*, const UI_32 *max_length*, const E_CWORD33_NotificationType *persType*)

Brief

register a notification in service

Parameters:

in	*hApp*	HANDLE hApp - Handle to the Framework
in	*pNotification*	PCSTR pNotification - Name of Notification
in	*max_length*	const UI_32 max_length - Max size of the notification message
in	*persType*	const E_CWORD33_NotificationType persType - Type of persistent

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle

Prerequisite

None

Change of internal state

None

_CWORD33_UnSubscribeSessionEventsWithHSMEvents API to unsubscribe from multiple events of a service. Also detaches HSM events from session events.

Parameters:

in	*hApp*	HANDLE - Application Handle
in	*pEventsArray*	PUI_32 - Array of events id's.
in	*uiListSize*	UI_32 - count of elements in array.
in	*hSession*	HANDLE - Session Handle

Returns:

status E_CWORD33_Status - success or error

See also:

_CWORD33_UnSubscribeSessionEventWithHSMEvent

E_CWORD33_Status _CWORD33_UnSubscribeSessionEventWithHSMEvent (HANDLE *hApp*, UI_32 *uiEventId*, HANDLE *hSession*)

Brief

unsubscribe from event of a service. detaches HSM event from session event.

Parameters:

in	*hApp*	HANDLE hApp - Application handle
in	*uiEventId*	UI_32 uiEventId - Event id
in	*hSession*	HANDLE hSession - Session Handle.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	invalid state handle
e_CWORD33_StatusFail	process failed

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_UnSubscribeSessionEventWithHSMEvent API to unsubscribe from event of a service. Also detaches HSM event from session event.

Parameters:

in	*hApp*	HANDLE - Application Handle
in	*uiEventId*	UI_32 - Event id
in	*hSession*	HANDLE - Session Handle

Returns:

status E_CWORD33_Status - success or error

Function Documentation

int32_t Backup_DataChk (PCSTR *tag_id*)

Brief

Check backup data.

Parameters:

in	*tagID*	PCSTR - Area ID(character string of less than 64 bytes)

Return values:

BKUP_RET_NORMAL	Terminated normally
BKUP_RET_ERRPARAM	Parameter error(Sync message transmission or

	reception(McInvokeSync) error[e_CWORD33_StatusInvldParam])
BKUP_RET_ERRINIT	Initializing(Sync message send or receive(McInvokeSync) error [e_CWORD33_StatusErrOther])
BKUP_RET_ERRTERM	Terminating(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusExit])
BKUP_RET_ERRNOENT	Data dose not exist(Sync message transmission or reception(McInvokeSync) fails [e_CWORD33_StatusFileLoadError])
BKUP_RET_ERRSIZE	Data size error(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusAccessError])
BKUP_RET_ERROR	Abnormal termination(McOpenSender failed, or sync message transmission or reception(McInvokeSync) error other than the above)

Prerequisite

None.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync

int32_t Backup_DataDel (PCSTR *tag_id*)

Brief

Delete backup data.

Parameters:

in	*tag_id*	PCSTR - Area ID(character string of less than 64 bytes)

Return values:

BKUP_RET_NORMAL	Terminated normally
BKUP_RET_ERRPARAM	Parameter error(Sync message transmission or reception(McInvokeSync) error[e_CWORD33_StatusInvldParam])
BKUP_RET_ERRINIT	Initializing(Sync message send or receive(McInvokeSync) error [e_CWORD33_StatusErrOther])
BKUP_RET_ERRTERM	Terminating(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusExit])
BKUP_RET_ERRNOENT	Data dose not exist(Sync message transmission or reception(McInvokeSync) fails [e_CWORD33_StatusFileLoadError])
BKUP_RET_ERRSIZE	Data size error(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusAccessError])

BKUP_RET_ERROR	Abnormal termination(McOpenSender failed, or sync message transmission or reception(McInvokeSync) error other than the above)

Prerequisite

None.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync

int32_t Backup_DataFil (PCSTR *tag_id*, uint32_t *ui_offset*, uint8_t *uc_pat*, uint32_t *ui_size*)

Brief

Write data to backup area with the specified pattern

Parameters:

in	*tagID*	PCSTR - Area ID(character string of less than 64 bytes)
in	*uiOffset*	uint32_t - Offset from the beginning of the area(0~size of backup area identified by area ID)
in	*ucPat*	uint8_t - Write pattern data(0x00~0xff)
in	*uiSize*	uint32_t - Write data size(0~size of backup area identified by area ID)

Return values:

BKUP_RET_NORMAL	Terminated normally
BKUP_RET_ERRPARAM	Parameter error(Sync message transmission or reception(McInvokeSync) error[e_CWORD33_StatusInvldParam])
BKUP_RET_ERRINIT	Initializing(Sync message send or receive(McInvokeSync) error [e_CWORD33_StatusErrOther])
BKUP_RET_ERRTERM	Terminating(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusExit])
BKUP_RET_ERRNOENT	Data dose not exist(Sync message transmission or reception(McInvokeSync) fails [e_CWORD33_StatusFileLoadError])
BKUP_RET_ERRSIZE	Data size error(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusAccessError])
BKUP_RET_ERROR	Abnormal termination(McOpenSender failed, or sync message transmission or reception(McInvokeSync) error other than the above)

Prerequisite

int32_t Backup_DataRd (PCSTR *tag_id*, uint32_t *ui_offset*, void * *pv_buf*, uint32_t *ui_size*)

Brief

Read data from backup area

Parameters:

in	*tagID*	PCSTR - Area ID(character string of less than 64 bytes)
in	*uiOffset*	uint32_t - Offset from the beginning of the area(0~size of backup area identified by area ID)
out	*pvBuf*	void * - A pointer which point to buffer used to storage read data
in	*uiSize*	uint32_t - Read data size(0~size of backup area identified by area ID)

Return values:

BKUP_RET_NORMAL	Terminated normally
BKUP_RET_ERRPARAM	Parameter error(Sync message transmission or reception(McInvokeSync) error[e_CWORD33_StatusInvldParam])
BKUP_RET_ERRINIT	Initializing(Sync message send or receive(McInvokeSync) error [e_CWORD33_StatusErrOther])
BKUP_RET_ERRTERM	Terminating(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusExit])
BKUP_RET_ERRNOENT	Data dose not exist(Sync message transmission or reception(McInvokeSync) fails [e_CWORD33_StatusFileLoadError])
BKUP_RET_ERRSIZE	Data size error(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusAccessError])
BKUP_RET_ERROR	Abnormal termination(McOpenSender failed, or sync message transmission or reception(McInvokeSync) error other than the above)

Prerequisite

None.

Change of internal state

Change of internal state according to the API does not occur.

Backup_DataWt

int32_t Backup_DataRdByNumID (uint32_t *num_id*, uint32_t *ui_offset*, void * *pv_buf*, uint32_t *ui_size*)

Brief

Read data from backup area

Parameters:

in	*numID*	uint32_t - Area ID specified by number
in	*uiOffset*	uint32_t - Offset from the beginning of the area(0~size of backup area identified by area ID)
out	*pvBuf*	void * - A pointer which point to buffer used to storage read data
in	*uiSize*	uint32_t - Read data size(0~size of backup area identified by area ID)

Return values:

BKUP_RET_NORMAL	Terminated normally
BKUP_RET_ERRPARAM	Parameter error(Sync message transmission or reception(McInvokeSync) error[e_CWORD33_StatusInvldParam])
BKUP_RET_ERRINIT	Initializing(Sync message send or receive(McInvokeSync) error [e_CWORD33_StatusErrOther])
BKUP_RET_ERRTERM	Terminating(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusExit])
BKUP_RET_ERRNOENT	Data dose not exist(Sync message transmission or reception(McInvokeSync) fails [e_CWORD33_StatusFileLoadError])
BKUP_RET_ERRSIZE	Data size error(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusAccessError])
BKUP_RET_ERROR	Abnormal termination(McOpenSender failed, or sync message transmission or reception(McInvokeSync) error other than the above)

Prerequisite

None.

Change of internal state

Change of internal state according to the API does not occur.

Backup_DataRd

int32_t Backup_DataSz (PCSTR *tag_id*, uint32_t * *pui_size*)

Brief

Get the size of the backup area.

Parameters:

in	*tagID*	PCSTR - Area ID(character string of less than 64 bytes)
out	*puiSize*	uint32_t * - A pointer which point to storage size

Return values:

BKUP_RET_NORMAL	Terminated normally
BKUP_RET_ERRPARAM	Parameter error(Sync message transmission or reception(McInvokeSync) error[e_CWORD33_StatusInvldParam])
BKUP_RET_ERRINIT	Initializing(Sync message send or receive(McInvokeSync) error [e_CWORD33_StatusErrOther])
BKUP_RET_ERRTERM	Terminating(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusExit])
BKUP_RET_ERRNOENT	Data dose not exist(Sync message transmission or reception(McInvokeSync) fails [e_CWORD33_StatusFileLoadError])
BKUP_RET_ERRSIZE	Data size error(Sync message transmission or reception(McInvokeSync) error [e_CWORD33_StatusAccessError])
BKUP_RET_ERROR	Abnormal termination(McOpenSender failed, or sync message transmission or reception(McInvokeSync) error other than the above)

Detailed Description

Macro Definition Documentation

#define CL_RegionAlloc(region, type, length) cl_region_alloc(region, sizeof(type) * length, CL_ALIGNOF(type))

Brief

Region allocation

Parameters:

in	*region*	cl_region_t * - the region to allocate
in	*size*	size_t * - the size to allocate
in	*align_size*	size_t * - the size to align

Return values:

the	pointer to region allocated

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

#define CL_RegionCleanupAdd(region, type, length) cl_region_cleanup_add(region, sizeof(type) * length, CL_ALIGNOF(type))

Brief

add region cleanup

Parameters:

in	*region*	cl_region_t * - the region to allocate
in	*size*	size_t * - the size to add
in	*align_size*	size_t * - the size to align

Return values:

the	pointer to region cleanup added

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

Function Documentation

int32_t CL_LockGet (void * *addr*)

Brief

Get the Lock. Block until get the Lock.

Parameters:

in	*addr*	void* - Lock information address.

Return values:

0	Success
EINVAL	Invalid parameter
EDEADLK	Mutex already locked

Prerequisite

Should call CL_LockMap to get the Lock information address.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

See also:

CL_LockRelease

void* CL_LockMap (int32_t *lid*)

Brief

Mapping the Lock information address.

Parameters:

in	*lid*	int32_t - LockID of the Lock used.(0~LID_NUM)

Return values:

addr	Lock address
MAP_FAILED	Error (errno)

Prerequisite

Should call CL_LockSystemInit(), CL_LockProcessInit() to open the Lock file.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

See also:

CL_LockUnmap

int32_t CL_LockNowait (void * *addr*)

Brief

Try to get Lock, shall immediately return.

Parameters:

in	*addr*	void* - Lock information address.

Return values:

0	Success
EINVAL	Invalid parameter
EBUSY	Busy

Prerequisite

Should call CL_LockMap to get the Lock information address.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

See also:

CL_LockRelease

int32_t CL_LockProcessInit (void)

Brief

Initialize the process Lock file.

Return values:

0	Success
-1	Error

Prerequisite

Should call CL_LockSystemInit() to generate Lock file.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

int CL_LockRelease (void * *addr*)

Brief

Release the Lock.

Parameters:

in	*addr*	addr - Lock information address.

Return values:

0	Success
EINVAL	Invalid parameter
EPERM	The current thread does not own the mutex

Prerequisite

Should call CL_LockMap to get the Lock information address.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

See also:

CL_LockGet, CL_LockNowait

int32_t CL_LockSystemInit (void)

Brief

Initialize the system lock.

Return values:

0	Success
-1	Error

Prerequisite

Prerequisites are nothing.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

See also:

none

int32_t CL_LockUnmap (void * *addr*)

Brief

Unmapping the Lock information.

Parameters:

in	*addr*	void* - Lock information address.

Return values:

0	Success
-1	Error

Prerequisite

Should call CL_LockSystemInit(), CL_LockProcessInit() before this function is called

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Sync only

See also:

CL_LockMap

int CL_MonitorGetEntry (CL_MonitorType_t *type*, uint32_t *id*, CL_MonitorEntry_t * *entry*)

Brief

Get Monitor Entry

Parameters:

in	*type*	CL_MonitorType_t - the type of monitor
in	*id*	uint32_t - the monitor id
out	*entry*	CL_MonitorEntry_t* - the pointer to monitor entry

Return values:

0	Success
-1	Error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

int CL_MonitorInit (CL_MonitorInit_t *init_type*)

Brief

Monitor initialize

Parameters:

in	*init_type*	CL_MonitorInit_t - the type of initialzation

Return values:

0	Success
-1	Error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

int CL_MonitorSearchDestroy (CL_MonitorSearch_t * *serch*)

Brief

Monitor searth destroy

Parameters:

in	*serch*	CL_MonitorSearch_t* - the pointor to monitory search

Return values:

0	Success
-1	Error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

int CL_MonitorSearchInit (CL_MonitorSearch_t * *serch*)

Brief

Monitor searth intialize

Parameters:

in	*serch*	CL_MonitorSearch_t* - the pointor to monitory search

Return values:

0	Success

-1	Error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

int CL_MonitorSearchTimeout (CL_MonitorSearch_t * *search*)

Brief

Monitor searth timeout

Parameters:

in	*serch*	CL_MonitorSearch_t* - the pointor to monitory search

Return values:

0	Success
-1	Error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

int CL_MonitorSetEntry (CL_MonitorType_t *type*, uint32_t *id*, CL_MonitorState_t *state*, uint32_t *timeout*, uint32_t *user_data*)

Brief

Set Monitor Entry

Parameters:

in	*type*	CL_MonitorType_t - the type of monitor

in	*state*	CL_MonitorState_t - the state of monitor
in	*timeout*	uint32_t - the vlaue of timeout
in	*user_data*	uint32_t - the user data

Return values:

0	Success
-1	Error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync

See also:

None

int CL_ProcessCleanup (int *sigchld_fd*, CL_ProcessCleanupInfo_t * *cleanup_info*)

Brief

Parameters:

in	*sigchld_fd*	int - CL_ProcessInit() function return to fd
out	*cleanup_info*	CL_ProcessCleanupInfo_t* - Pointer to chiled process info

CL_ProcessCleanupInfo_t struct

```
1 typedef struct {
2   pid_t pid;          /* The process ID of the child. */
3   int code;           /* signal code */
4   int status;         /* the exit status of the child or the signal */
5 } CL_ProcessCleanupInfo_t;
```

Return values:

0	Success
1	Success (If WNOHANG was specified and no child(ren) specified by id has yet changed state)
-1	Error (setting to errno)

Prerequisite

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

No match

See also:

none

int CL_ProcessCreate (const char * *file*, char *const *argv*[], char *const *envp*[], const CL_ProcessAttr_t * *attr*)

Brief

Parameters:

in	*file*	const char* -
in	*argv[]*	char* const -
in	*envp[]*	char* const
in	*attr*	const CL_ProcessAttr_t* -

CL_ProcessAttr_t struct

```
1 typedef struct {
2   char body[148];
3 } CL_ProcessAttr_t;
```

Return values:

int	Success(PID)
-1	Error

Prerequisite

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

Open Close

See also:

Detailed Description

Class Documentation

struct _NC_register_notif_msg

A structure to register notification msg

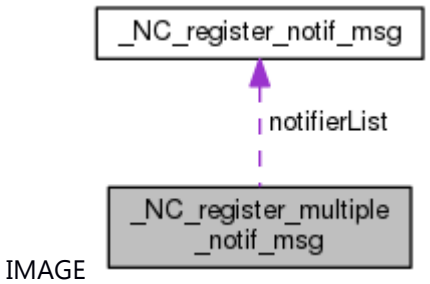
Class Members:

UI_8	dummy[4]	Packing to 32 bit boundary.
UI_32	maxLength	Maximum possible length (bytes) of.
CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	notification event name string
E_CWORD33_NotificationType	persType	Specifies persitence for this notification.

struct _NC_register_multiple_notif_msg

A structure to register multiple notification msg

Collaboration diagram for _NC_register_multiple_notif_msg:



IMAGE

Class Members:

NC_register_notif_msg	notifierList[1]	variable number of structures
UI_32	numNotifications	This has to be UI_32 to avoid holes.

struct _NC_register_immediate_notif_msg

A structure to register immediate notification msg

Class Members:

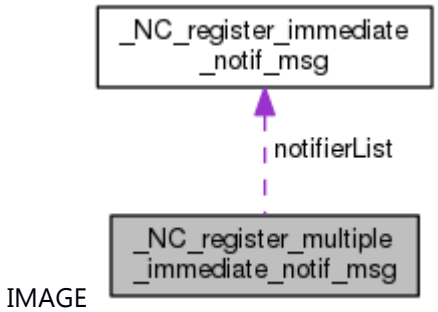
UI_32	delay	Delay time for persistence.
UI_8	dummy[4]	Packing to 32 bit boundary.
UI_32	maxLength	Maximum possible

		length (bytes) of.
CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	Notification Event Name string.
E_CWORD33_NotificationType	persType	Specifies persitence for this notification.

struct _NC_register_multiple_immediate_notif_msg

A structure to register multiple immediate notification msg

Collaboration diagram for _NC_register_multiple_immediate_notif_msg:



IMAGE

Class Members:

NC_register_immediate_notif_msg	notifierList[1]	variable number of structures
UI_32	numNotifications	This has to be UI_32 to avoid holes.

struct _NC_unregister_notif_msg

A structure to unregister notification msg

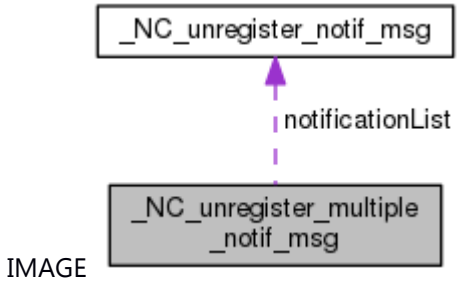
Class Members:

CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	Notification Event Name string.

struct _NC_unregister_multiple_notif_msg

A structure to unregister multiple notification msg

Collaboration diagram for _NC_unregister_multiple_notif_msg:



IMAGE

Class Members:

NC_unregister_notif_msg	notificationList[1]	notification event name List
UI_32	numNotifications	notification event name num

struct _NC_savepersdata_ack

A structure to save pers data

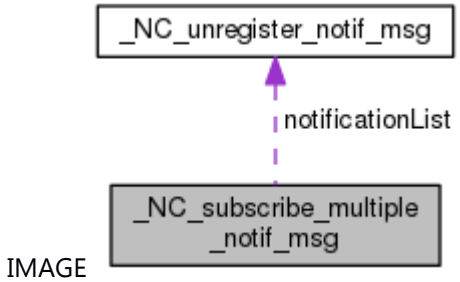
Class Members:

E_CWORD33_Status	eStatus	e_CWORD33_StatusOK is (valid - data stored, anything else is

struct _NC_subscribe_multiple_notif_msg

A structure to subscribe multiple notification msg

Collaboration diagram for _NC_subscribe_multiple_notif_msg:



IMAGE

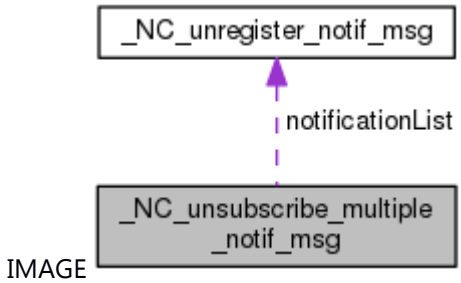
Class Members:

NC_subscribe_msg	notificationList[1]	notification event name List
UI_32	numNotifications	notification event name num

struct _NC_unsubscribe_multiple_notif_msg

A structure to subscribe multiple notification msg

Collaboration diagram for _NC_unsubscribe_multiple_notif_msg:



IMAGE

Class Members:

NC_unsubscribe_frm_notif_msg	notificationList[1]	notification event name List
UI_32	numNotifications	notification event name num

struct __NC_get_persdata_failed_ack

A structure to get pers data failed

Class Members:

CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	notification name

struct _NC_User

A structure to set personality

Class Members:

CHAR	cUsername[MAX_PATH_LENGTH]	name of personality

struct _NC_RegisterPersistentFileMsg

A structure to register persistent file with the notification_persistent_service

Class Members:

BOOL	bIsUserFile	is user file
CHAR	cFileTag[MAX_STRING_SIZE_TAG]	Tag associated with the.

struct _NC_LoadPersistedFileMsg

A structure to specify where to load the file associated with the Tag

Class Members:

CHAR	cFilePath[MAX_PATH_LENGTH]	path to which the file needs to retrieved
CHAR	cFileTag[MAX_STRING_SIZE_TAG]	Tag associated with the file.
CHAR	cUsername[MAX_PATH_LENGTH]	Name of the user for user specific file.

struct _NC_ReleasePersistentFileMsg

A structure to release persistent file

Class Members:

CHAR	cFilePath[MAX_PATH_LENGTH]	path from which the

CHAR	cFileTag[MAX_STRING_SIZE_NOTIFICATION]	Tag associated with the.
CHAR	cUsername[MAX_PATH_LENGTH]	Name of the user for user specific file.
E_CWORD33_ReleaseType	e_CWORD33_ReleaseType	should the file be persisted

struct _NC_RegisterPersistentFolderMsg

A structure to register persistent folder with the notification_persistent_service

Class Members:

BOOL	bIsUserFolder	Check if the folder is of user type.
CHAR	cFolderTag[MAX_STRING_SIZE_TAG]	Tag associated with the.

struct _NC_LoadPersistedFolderMsg

A structure to specify where to load the folder associated with the Tag

Class Members:

CHAR	cFolderPath[MAX_PATH_LENGTH]	path to which the folder needs to retrieved
CHAR	cFolderTag[MAX_STRING_SIZE_TAG]	Tag associated with the folder.
CHAR	cUsername[MAX_PATH_LENGTH]	Name of the user for user specific folder.

struct _NC_ReleasePersistentFolderMsg

A structure to Release Persistent Folder Msg

Class Members:

CHAR	cFolderPath[MAX_PATH_LENGTH]	path from which the folder
CHAR	cFolderTag[MAX_STRING_SIZE_NOTIFICATION]	Tag associated with.
CHAR	cUsername[MAX_PATH_LENGTH]	Name of the user for user.
E_CWORD33_ReleaseType	e_CWORD33_ReleaseType	should the file be

		persisted

struct _NC_LoadPersistedAck

A structure to Load Persisted Ack

Class Members:

CHAR	cTag[MAX_PATH_LENGTH]	tag of the file/folder for which acknowledge is made
E_CWORD33_Status	eStatus	ack the success/failure in

struct _NC_NorPersistentData

A structure to Nor Persistent Data

Class Members:

UI_32	dataSize	data size
CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	Notification Event Name string.
CHAR	pPublisherName[MAX_NAME_SIZE_APP]	Publisher Event Name string.
UI_32	uiDelay	ui Delay
UI_32	uiMaxSize	ui Max Size

struct _NC_ClearPersistedDataReq

A structure to request for deleting data from persistent memory

Class Members:

E_CWORD33_ClearPersistence	ePersistenceData	defines what

struct _NC_ClearPersisteDatadAck

A structure for receiving ack of data deleted from persistent memory

Class Members:

E_CWORD33_Status	eStatus	ack status of ClearPersistedData request

struct _NC_StopMsgData

A structure to request stop message to notification_persistent_service.

Class Members:

E_CWORD33_ShutdownType	eShutdownType	shutdown type
UI_32	uiStopMsgData	Reason for sending stop message to NPPService.

struct _NC_SetPersistType

A structure to set the persist type of file and folder

Class Members:

CHAR	cTag[MAX_PATH_LENGTH]	tag name of the file or folder
E_CWORD33_PersistCategory	ePersistType	persist type

struct _NC_ImmediateWriteAck

A data received with ack sent by notification_persistent_service when immediate notification data is written in persistent memory

Class Members:

E_CWORD33_Status	eStatus	status of request
CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	notification Name

struct _NotificationInfo

A structure to Notification Info

Class Members:

UI_8	dummy[4]	Packing to 32 bit boundary.
UI_32	maxLength	Maximum possible length (bytes) of the message data.
CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	Notification Event Name string.
E_CWORD33_NotificationType	persType	Specifies persitence for this notification.

struct _ImmediateNotificationInfo

A structure to Immediate Notification Info

Class Members:

UI_32	delay	
UI_8	dummy[4]	Packing to 32 bit boundary.
UI_32	maxLength	Maximum possible length (bytes) of the message data.
CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	Notification Event Name string.
E_CWORD33_NotificationType	persType	Specifies persitence for this notification.

struct _SubscribeInfo

A structure to Subscribe Info

Class Members:

CHAR	notificationName[MAX_STRING_SIZE_NOTIFICATION]	Notification Event Name string.

Typedef Documentation

typedef struct _ImmediateNotificationInfo ImmediateNotificationInfo

A structure to Immediate Notification Info

typedef struct _NC_ClearPersisteDatadAck NC_ClearPersisteDatadAck

A structure for receiving ack of data deleted from persistent memory

typedef struct _NC_ClearPersistedDataReq NC_ClearPersistedDataReq

A structure to request for deleting data from persistent memory

typedef struct __NC_get_persdata_failed_ack NC_get_persdata_failed_ack

A structure to get pers data failed

typedef struct _NC_ImmediateWriteAck NC_ImmediateWriteAck

A data received with ack sent by notification_persistent_service when immediate notification data is written in persistent memory

typedef struct _NC_LoadPersistedAck NC_LoadPersistedAck

A structure to Load Persisted Ack

typedef struct _NC_LoadPersistedFileMsg NC_LoadPersistedFileMsg

A structure to specify where to load the file associated with the Tag

typedef struct _NC_LoadPersistedFolderMsg NC_LoadPersistedFolderMsg

A structure to specify where to load the folder associated with the Tag

typedef struct _NC_NorPersistentData NC_NorPersistentData

A structure to Nor Persistent Data

typedef struct _NC_register_immediate_notif_msg NC_register_immediate_notif_msg

A structure to register immediate notification msg

typedef struct _NC_register_multiple_immediate_notif_msg NC_register_multiple_immediate_notif_msg

A structure to register multiple immediate notification msg

typedef struct _NC_register_multiple_notif_msg NC_register_multiple_notif_msg

A structure to register multiple notification msg

typedef struct _NC_register_notif_msg NC_register_notif_msg

A structure to register notification msg

typedef struct _NC_RegisterPersistentFileMsg NC_RegisterPersistentFileMsg

A structure to register persistent file with the notification_persistent_service

typedef struct _NC_RegisterPersistentFolderMsg NC_RegisterPersistentFolderMsg

A structure to register persistent folder with the notification_persistent_service

typedef struct _NC_ReleasePersistentFileMsg NC_ReleasePersistentFileMsg

A structure to release persistent file

typedef struct _NC_ReleasePersistentFolderMsg NC_ReleasePersistentFolderMsg

A structure to Release Persistent Folder Msg

typedef struct _NC_savepersdata_ack NC_savepersdata_ack

A structure to save pers data

typedef struct _NC_SetPersistType NC_SetFilePersistType

A structure to set the persist type of file and folder

typedef struct _NC_StopMsgData NC_StopMsgData

A structure to request stop message to notification_persistent_service.

typedef struct _NC_subscribe_multiple_notif_msg NC_subscribe_multiple_notif_msg

A structure to subscribe multiple notification msg

typedef struct _NC_unregister_multiple_notif_msg NC_unregister_multiple_notif_msg

A structure to unregister multiple notification msg

typedef struct _NC_unregister_notif_msg NC_unregister_notif_msg

A structure to unregister notification msg

typedef struct _NC_unsubscribe_multiple_notif_msg NC_unsubscribe_multiple_notif_msg

A structure to subscribe multiple notification msg

typedef struct _NC_User NC_User

A structure to set personality

typedef struct _NotificationInfo NotificationInfo

A structure to Notification Info

typedef enum _NS_NPServiceEvent NS_NPServiceEvent

notification_persistent_service service event

typedef enum _NS_NPServiceProtocol NS_NPServiceProtocol

notification_persistent_service protocol msg name define

typedef struct _SubscribeInfo SubscribeInfo

A structure to Subscribe Info

Enumeration Type Documentation

enum _NS_NPServiceEvent

notification_persistent_service service event

enum _NS_NPServiceProtocol

notification_persistent_service protocol msg name define

Enumerator

NPS_UNREGISTER_EV_REQ <16+0 Request to register a Notification

NPS_PUBLISH_EV_REQ <1 Request to unregister a Notification

NPS_NOTIFY_EV_REQ <2 Sender request to NP service to publish (send) a notification to subscribers

NPS_SUBSCRIBE_TO_EV_REQ <3 Message to subscribers that the notification was generated by publisher

NPS_UNSUBSCRIBE_FROM_EV_REQ <4 Request to subscribe to a notification

NPS_SET_PERSIST_FILE_PATH_REQ <5 Request to unsubscribe from a notification

NPS_GET_PERS_DATA_REQ <6 Request to add a path to the list of files to be persisted

NPS_GET_PERS_DATA_ACK <7 Request to get persistent data for specified notification

NPS_GET_PERS_FILE_REQ <8 MSG from NPS to requester of persistent data.

NPS_GET_PERS_FILE_ACK <9 Request to get persistent File from specified path

NPS_SAVE_PERS_DATA_REQ <10 MSG from NPS to inform that file was retrieved from persistent mem and copied.

NPS_SAVE_PERS_DATA_ACK <11 Request to save the persistent data to what ever file that has been defined.

NPS_RELEASE_PERS_FILE_REQ <12 MSG from NPS to requester of Save Action.

NPS_NPP_STOP_REQ <13 Request to NPS to persist file in persistent memory

NPS_TST_WAKEUP <14 MSG from system manager to NS_NPS to stop processing. NS_NPS goes to idle state.

NPS_BATCH_SUBSCRIBE_TO_EV_REQ <15

NPS_GET_PERS_DATA_FAILED_ACK <16 Request to subscribe to a batch of notification(s)

NPS_SET_PERSONALITY_REQ <17 Failed to get persistent data

NPS_CHANGE_PERSONALITY_REQ <18 Request to change current user

NPS_USER_CHANGE_REQ <19 Request to change current user

NPS_SET_PERSIST_FOLDER_PATH_REQ <20 MSG from NPS to *CWORD33* applications.

NPS_GET_PERS_FOLDER_REQ <21 Request to add a path to the folder to be persisted

NPS_RELEASE_PERS_FOLDER_REQ <22 Request to get persistent Folder from specified path

NPS_GET_PERS_FOLDER_ACK <23 Request to NPS to persist folder in persistent memory

NPS_NPP_STOP_ACK <24 Ack from NPS to requester to inform that folder was retrieved from persistent mem and copied.

NPS_BATCH_UNSUBSCRIBE_FROM_EV_REQ <25 Ack from NS_NPS to system manager on NPS_NPP_STOP_REQ request

NPS_GET_READYSTATUS_REQ <26

NPS_GET_READYSTATUS_ACK <27 Request from system manager to check the ready status of NPPService

NPS_REGISTER_NOR_EV_REQ <28 Ack from NPPService to system manager, only if NPPService is in ready state

NPS_DELETE_PERSISTED_DATA_REQ <29 Request to register immediate notification

NPS_DELETE_PERSISTED_DATA_ACK <30 Request to delete the persistent data.

NPS_SET_DEFAULT_PERS_DATA <31 Ack of deleting the persistent data.

NPS_SET_NOTFN_PERSISTENT_TYPE <32 Sets the default data for persistent notification.

NPS_SET_FILE_PERSISTENT_TYPE <33 Sets the persistent type of notification.

NPS_SET_FOLDER_PERSISTENT_TYPE <34 Sets the persistent type of file.

NPS_SYNCHRONOUS_WRITE_NOTIFY_REQ <35 Sets the persistent type of folder.

NPS_IMMEDIATE_WRITE_ACK when written using synchronous API.

<36 Updates the immediate notification data in NPPService,

NPS_NPP_SYNC_REQ <38 Processing which synchronizes by NPPService (syncfs)

<37 Sends the ack to publisher of immediate notification after data is written to persistent memory.

Function Documentation

E_CWORD33_Status NPChangePersonality (HANDLE *hNPMsgQ*, PCSTR *pPublisherName*, PCSTR *pUserName*)

Brief

API to send message to Notification Service to change the current Personality.

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pPublisherName*	PCSTR - Name of publisher message queue.
in	*pUserName*	PCSTR - Name of new Personality

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

E_CWORD33_Status Enum

CWORD33_NPChangePersonality

E_CWORD33_Status NPClearPersistedData (HANDLE *hNPMsgQ*, PCSTR *pRequesterName*, E_CWORD33_ClearPersistence *e_CWORD33_ClearPersistenceScope*)

Brief

API to delete the persisted data of NS_NPS. Note: Currently to be used by HMI service only

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of

		Notification service.
in	*pRequesterName*	PCSTR - Name of the requesters message queue.
in	*e_CWORD33_ClearPersistenceScope*	E_CWORD33_ClearPersistence - specifies what data to delete from persistent memory.

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

E_CWORD33_Status Enum

```
1  typedef enum e_CWORD33_Status {

E_CWORD33_Status NPGetReadyStatusOfNPP (HANDLE *hNPMsgQ*, PCSTR *pRequesterName*)

Brief

To be used by System Manager Service only. SystemManager will use this API to get the ready status of NPPService.

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pRequesterName*	PCSTR - Name of the requesters message queue.
in	*pUserName*	PCSTR - Name of new Personality

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

E_CWORD33_Status Enum

_CWORD33_NPGetReadyStatusOfNPP

E_CWORD33_Status NPLoadPersistentFile (HANDLE *hNPMsgQ*, PCSTR *pPublisherName*, PCSTR *pDstFilePath*, PCSTR *pTag*, HANDLE *hUser*)

Brief

API to send message to Notification Service to copy file from persistent memory to specified path. The caller recieves an acknowledgement once NPS completes file copy

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pPublisherName*	PCSTR - Name of publisher message queue.
in	*pDstFilePath*	PCSTR - Complete file path to which the file should be copied from persistent area.
in	*pTag*	PCSTR - Tag associated with the file that needs to be copied to pDstFilePath.
in	*hUser*	HANDLE - Load the file for the specified user.

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

E_CWORD33_NPReadPersistedData

E_CWORD33_Status NPRegisterImmediateNotifications (HANDLE *hNPMsgQ*, PCSTR *pPublisherName*, UI_32 *numNotifications*, ImmediateNotificationInfo * *pNotificationArray*)

Brief

API to send message to Notification Service to register a set of immediate notifications

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pPublisherName*	PCSTR - Name of Publisher message queue.
in	*numNotifications*	PCSTR - Name of Notification.
in	*pNotificationArray*	ImmediateNotificationInfo - Array of immediate notifications

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

_CWORD33_NPRegisterPersistentFile

E_CWORD33_Status NPRegisterPersistentFolder (HANDLE *hNPMsgQ*, PCSTR *pPublisherName*, PCSTR *pTag*, BOOL *bIsUserFolder*)

Brief

API to send message to Notification Service to add a folder path as to be persisted.

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pPublisherName*	PCSTR - Name of publisher message queue.
in	*pTag*	PCSTR - A unique identifier for the folder path specified, this is used in retrieve/Load the folder later.
in	*bIsUserFolder*	BOOL - Set TRUE, if registering user folder.

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

CWORD33_NPSetFilePersistentType

E_CWORD33_Status NPSetFolderPersistentType (HANDLE *hNPMsgQ*, PCSTR *pPublisherName*, PCSTR *pTag*, E_CWORD33_PersistCategory *ePersistCategory*)

Brief

API to send message to Notification Service to set the persist category of file.

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pPublisherName*	PCSTR - Name of publisher message queue.
in	*pTag*	PCSTR - A unique identifier for the file path specified, this is used in retrieve/Load the file later
in	*ePersistCategory*	E_CWORD33_PersistCategory - persist category

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

E_CWORD33_Status Enum

_CWORD33_NPSubscribeToNotification

E_CWORD33_Status NPSubscribeToNotifications (HANDLE *hNPMsgQ*, PCSTR *pSubscriberName*, UI_32 *numNotifications*, SubscribeInfo * *pSubscribeInfoArray*)

Brief

API to send message to Notification Service to add multiple subscriptions for a set of notification.

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pSubscriberName*	PCSTR - Name of subscriber message queue
in	*numNotifications*	UI_32 - Number of Notifications
in	*pSubscribeInfoArray*	SubscribeInfo* - Array of SubscribeInfo

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

_CWORD33_NPUnsubscribeFromNotification

E_CWORD33_Status NPUnsubscribeFromNotifications (HANDLE *hNPMsgQ*, PCSTR *pUnSubscriberName*, UI_32 *numNotifications*, SubscribeInfo * *pUnSubscribeInfoArray*)

Brief

API to send message to Notification Service to unsubscribe multiple subscriptions for a set of notification.

Parameters:

in	*hNPMsgQ*	HANDLE - Handle to message queue of Notification service.
in	*pSubscriberName*	PCSTR - Name of subscriber message queue
in	*numNotifications*	UI_32 - Number of Notifications
in	*pUnSubscribeInfoArray*	SubscribeInfo - Array of notifications

Return values:

E_CWORD33_Status	indicates success or error
Success(e_CWORD33_StatusOK)	
Error(anything	else)

Detailed Description

Class Documentation

struct _stLogEvent_

Class Members:

UI_16	cnt_ID	
UI_8	data[4]	
UI_8	event_id	
UI_8	grp_ID	
SystemPhase	phase	
UI_32	ts	
Datatype	typeofdata	

struct _stLogCount_

Class Members:

UI_16	cnt_id	
SystemPhase	phase	

struct __CWORD33_LOGPARAM

_CWORD33_LOG parameter

Class Members:

CHAR	cZones[USER_ZONES_COUNT][ZONE_TEXT_SIZE]	<output options (r NS_LoggingMethod_t)
T_CWORD33_LoggerSeverity	eSeverity	<mask optio ZONEMASK(10)...ZONEMASK((ref. T_CWORD33_Zone)
UI_8	uiLogOptions	
T_CWORD33_ZoneMask	uiZoneMask	<mask text ZONE_TEXT_10

		ZONE_TEXT_n

struct tag_Change_Log_Parameters

Class Members:

T_CWORD33_LoggerSeverity	eSeverity	
UI_8	uiLogOptions	
T_CWORD33_ZoneMask	uiZoneMask	

struct _TNS_EnableRcsLogging

Class Members:

BOOL	m_bEnable	
CHAR	m_cAppName[MAX_NAME_SIZE_APP]	

struct __CWORD33_LOGPPARAM

Performance LOG parameter.

Class Members:

BOOL	bIsPLogEnabled	PLog enabled or disabled.
EPLOG_TIME_FORMAT	eTimeFormat	Time format when PLog is printed.
UI_64	ui64GapInuS	Gap in micro seconds.
UI_8	uiLogOutputOptions	Output log options.

struct __CWORD33_LOGSYSEVENTPARAM

System event LOG parameter.

Class Members:

BOOL	bIsSysEventLogEnabled	SysEvent log enabled or disabled.

struct _NSRingBufferHdr

Class Members:

BOOL	m_bIsFull	
UI_32	m_uiReadPtr	
UI_32	m_uiRingBufferSize	
UI_32	m_uiUnReadSize	
UI_32	m_uiWritePtr	

struct _NSRingBufferMtx

Class Members:

int	m_lid	
pthread_mutex_t	m_tBufMutex	

struct SMsgHeader

Class Members:

uint16_t	cmd	
uintptr_t	id	
UI_32	size	

struct SReplyHeader

Class Members:

UI_32	size	
E_CWORD33_Status	status	

struct _NSSharedBuffer

Class Members:

BOOL	m_bIsFull	
pthread_mutex_t	m_tBufMutex	
pthread_cond_t	m_tCondVar	
UI_32	m_uiReadPtr	
UI_32	m_uiShMemSize	
UI_32	m_uiUnReadSize	
UI_32	m_uiWritePtr	

struct _NSTimerInfo

Timer info, defines the initial start of a timer, the repeat timer values and the cmd id for a timer.

Class Members:

UI_16	iCmd	
UI_64	rpt_nsec	
time_t	rpt_sec	
UI_64	t_nsec	
time_t	t_sec	

struct Int2Type

template<int v>

struct Int2Type< v >

Class Members:

	__unnamed__	

struct Type2Type

template<class T>

struct Type2Type< T >

Class Members:

typedef T	Type	

struct FSig

template<class Sig>

struct FSig< Sig >

Macro Definition Documentation

#define _CWORD33__APP_VERSION_BUILDVER() "undefined"

define macro for the building version

#define _CWORD33__APP_VERSION_MAJOR() (0)

define macro for the major number of the version

#define _CWORD33__APP_VERSION_MINOR() (0)

define macro for the minor number of the version

#define _CWORD33__APP_VERSION_PRODUCTID() "undefined"

define macro for product version

#define _CWORD33__APP_VERSION_REVISION() (0)

define macro for the revision number

#define _CWORD33__GET_VERSION() "undefined_undefined_00.00.00"

define macro for version string

#define _CWORD33__SET_ZONES()

Value:{UI_32 LogArr[] = {_CWORD33_LOGAPPZONES}; \
NsLogParseZones(&g__CWORD33_LogParams, (UI_32)_countof(LogArr), _CWORD33_LOGAPPZONES); \
NsLogSet_CWORD33_LogParams(&g__CWORD33_LogParams);}

Brief

This macro API register _CWORD33_LOGAPPZONES.

Return values:

none	

Prerequisite

none

Change of internal state

Classification

Public

Type

No match

See also:

NsLogSet_CWORD33_LogParams

#define _CWORD33_LOG(zone, funcname, print_fmt, args...) (zone != ZONEMASK(11))?((IS_ZONE_SET(zone))?TEXT_ZONE(zone, funcname, print_fmt, ## args):((void)0)):((void)(0))

Brief

Developers should use the _CWORD33_LOG for logging.

Parameters:

in	*zone*	Defined zone in a process (e.g. ZONE_FUNC)
in	*funcname*	Name of the class or method where the log was written (e.g. "main")
in	*print_fmt*	string similar to that of a printf statement
in	*args*	Data arguments(option)

Return values:

none	

Prerequisite

Change of internal state

Classification

Public

Type

No match

See also:

ZONEMASK, IS_ZONE_SET, NsLog, NsLog0

#define _CWORD33_LOG0 _CWORD33_LOG

Deprecated API. Use _CWORD33_LOG instead.

Used to log data that contains trailing arguments

Example: _CWORD33_LOG0(ZONE_INFO, **FUNCTION** , "testers return value is [%d]!", rtnValue);

#define _CWORD33_LOG_CNT(zone, CntId, n...) NsLog_Cnt(CntId, ##n)

_CWORD33_LOG_CNT

Counter logger mechanism.(Send data to SS event logger Queue)

Note:

The ZONE is not used.

Parameters:

in	*zone*	Defined zone in a process (e.g. ZONE_FUNC)
in	*CntId*	UI_16 - ID of Event from comm layer
in	*n*	UI_8 - number of variable arguments inputted

Deprecated API. Not use.

#define _CWORD33_LOG_EVT(zone, EvtId, n...) NsLog_Evt(EvtId, ##n)

_CWORD33_LOG_EVT

Event logger mechanism.(Send data to SS event logger Queue)

Note:

The ZONE is not used.

Parameters:

in	*zone*	Defined zone in a process (e.g. ZONE_FUNC)
in	*EvtId*	UI_16 - ID of Event from comm layer
in	*n*	UI_8 - number of variable arguments inputted

Deprecated API. Not use.

#define _CWORD33_LOG_EVTCNT(zone, CntId, EvtId, n...) NsLog_EvtCnt(CntId, EvtId, ##n)

_CWORD33_LOG_EVTCNT

Deprecated API. Not use.

#define _CWORD33_LOG_PERFORMANCE(print_fmt, args...) ((IS_PLOG_ENABLED()) ? PLOG_TEXT(print_fmt, ## args): ((void)0))

_CWORD33_LOG_PERFORMANCE

_CWORD33_LOG_PERFORMANCE is a logging API provided specifically for logging performance metrics.

Note:

This macro API is disable in Linux system It should be used in few locations within an application. (Max 5 times per application). It should never be used in place of _CWORD33_LOG.

Parameters:

in	*print_fmt*	string similar to that of a printf statement
in	*args*	Data arguments

#define _CWORD33_LOG_PERFORMANCE_DEBUG(print_fmt, args...) ((IS_PLOG_ENABLED()) ? PLOG_TEXT(print_fmt, ## args): ((void)0))

_CWORD33_LOG_PERFORMANCE_DEBUG

Prints a performance log in PosixBasedOS001 system log. These logs can be viewed by using utility sloginfo.

Note:

This macro API is disable in Linux system This macro API is disable if defined "___CWORD33_LOG_NDEBUG_LEVEL2__"

Parameters:

in	*print_fmt*	PCSTR - Input string
in	*args*	string similar to that of a printf statement and data argments

#define _CWORD33_LOG_SYSTEMEVENT(print_fmt, args...)

Value:((IS_SYSEVENTLOG_ENABLED()) ?\
SYSEVENTLOG_TEXT(print_fmt, ## args): ((void)0))

_CWORD33_LOG_SYSTEMEVENT

Parameters:

in	*print_fmt*	string similar to that of a printf statement
in	*args*	Data arguments

#define _CWORD33_LOGZONES {0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}

extern _CWORD33_LOG parameter

Global variable that's used by the Native Services Logger. An application will setup this variable in their main, values are user defined and provide user control of what should and shouldn't get logged.

```
1 _CWORD33_LOGPARAM g__CWORD33_LogParams =

Function Documentation

int _CWORD33_AcquireResouce (const char * *mod*, const char * *key*, long * *resource*)

Summary

This function is used to acquire the resourceid associated with the mod and the key.

Parameters:

[IN]	mod const char * - the mod of resource
[IN]	key const char * - the key of resource
[OUT]	resource long * - resource ID

Return values:

ref_counter	the counter of user

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

int _CWORD33_GetResource (const char * *mod*, const char * *key*, long * *resource*)

Summary

This function is used to get the resourceid associated with the mod and the key.

Parameters:

[IN]	mod const char * - the mod of resource
[IN]	key const char * - the key of resource
[OUT]	resource long * - resource ID

Return values:

-1	fail
0	success

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

int _CWORD33_RegistResouce (const char * *mod*, const char * *key*, long *resource*, int *init_counter*)

Summary

This function is used to register the resource associated with the mod and the key.

Parameters:

[IN]	mod const char * - the mod of resource
[IN]	key const char * - the key of resource
[IN]	resource const char * - resource ID
[IN]	init_counter long - resource user counter

Return values:

-1	fail
0	success

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

int _CWORD33_ReleaseResouce (const char * *mod*, const char * *key*)

Summary

This function is used to release the resourceid associated with the mod and the key.

Parameters:

[IN]	mod const char * - the mod of resource
[IN]	key const char * - the key of resource

Return values:

ref_counter	the counter of user

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

int _CWORD33_SearchResourseKey (const char * *mod*, long *resource*, const char ** *key*)

Summary

This function is used to get the key associated with the mod and the resourceid.

Parameters:

[IN]	mod const char * - the mod of resource
[IN]	resource long - resource ID
[OUT]	key const char * - the key of resource

Return values:

-1	fail
0	success

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

int _CWORD33_UnregistResouce (const char * *mod*, const char * *key*)

Summary

This function is used to unregister the resource associated with the mod and the key.

Parameters:

[IN]	mod const char * - the mod of resource
[IN]	key const char * - the key of resource

Return values:

0	success

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

E_CWORD33_Status DiscardDataFromShared (TMemID *id*)

Summary

Discard a chunk of memory in SharedMem

Parameters:

in	*id*	13 TMemID - MemID of the shared data

Return values:

e_CWORD33_StatusOK	- Success
e_CWORD33_StatusInvldParam	-Invalid parameter
e_CWORD33_StatusInvldID	-Invalid id
e_CWORD33_StatusFail	-Some sort of error occurred

Preconditions

Change of the internal state

None

Classification

Type

sync only

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

None

E_CWORD33_Status GetDataFromShared (TMemID *id*, void * *data*, UI_32 *dataMaxBytes*)

Summary

Retrieve a large chunk of memory using SharedMem service

Parameters:

in	*id*	14 TMemID - MemID of the shared data
in	*data*	15 void* - Buffer to store data in, must be at least as large as buffer associated with id
in	*dataMaxBytes*	16 UI_32 - Size of data - system will never copy more than dataMaxBytes bytes into data

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusInvldID	Invalid id
e_CWORD33_StatusFail	Some sort of error occurred

e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

None

UI_32 GetLengthOfDataFromShared (TMemID *id*)

Summary

Query the minimum buffer size, in bytes, necessary to hold a chunk of memory in SharedMem

Parameters:

in	*id*	17 TMemID - MemID of the shared data

Return values:

length	- Minimum buffer size, in bytes, required to hold the data associated with id.

Preconditions

Change of the internal state

None

Classification

Public

Type

sync only

TMemIDResult
Except 0:Success
0:Failure

None

template<typename T > Accumulator<T> MakeAccumulator (T *n*)

Accumulator utility function.

Given a value n of type T, returns an accumulator of type Accumulator<T> initialized to value n

E_CWORD33_Status McClearData (PVOID *data*)

Brief
Clears the data that may be pending for the a message in shared memory.

Parameters:

in	*data*	PVOID - pointer to the data was received from the McReceive Call

Return values:

E_CWORD33_Status	indicates if the data was clear successfully
e_CWORD33_StatusOK	- success
e_CWORD33_StatusInvldBuf	- invalid buffer
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusInvldID	- invalid ID
e_CWORD33_StatusFail	- other errors

Preconditons

Message is received by McReceive and so on.

Change of internal status

none

Classification
Public

Type
Sync only

See also:
McReceive, McReceiveWithSession

E_CWORD33_Status McClose (HANDLE *hMessage*)

Brief

Close a connection to a Receiver message queue.

Parameters:

in	*hMessage*	HANDLE - handle that will be closed

Return values:

E_CWORD33_Status	indicates if the close was successfully
e_CWORD33_StatusOKsuccess	
e_CWORD33_StatusInvldHandle	- If hMessage is NULL or invalid
e_CWORD33_StatusInvldHndlType-if	hMessage is invalid

Preconditons

message queue(McOpenSenderMcOpenReceiver) is created in advance

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenSender, McOpenReceiver, McOpenSyncReceiver

E_CWORD33_Status McCreateInvokerName (PCSTR *source*, UI_32 *sessionid*, PSTR *invokerName*, UI_32 *size*)

Brief

Create synchronous invoke response MQ name.

Parameters:

in	*source*	PCSTR - source service name
in	*sessionid*	UI_32 - session id
in	*invokerName*	PSTR - create invoker name buffer
in	*size*	UI_32 - InvokerName buffer size

Return values:

E_CWORD33_Status	indicates if the close was successfully
e_CWORD33_StatusOK	
e_CWORD33_StatusInvldParam	-if parameter is invalid

Preconditons

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenSyncReceiver

void McFlushReceiver (HANDLE *hMessage*)

Brief

Flush's all data on HANDLE's Receiver message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the recvMessage queue that will be flushed

Return values:

void	

Preconditons

message queue(McOpenReceiver)is created in advance

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenSender, McOpenReceiver, McOpenSyncReceiver

E_CWORD33_Status McForward (HANDLE *hMessage*, PCSTR *source*, UI_32 *iCmd*, TMemID *USID*)

Brief

Forward a Message to indicate that there is a Shared Memory

Parameters:

in	*hMessage*	HANDLE - handle to the send message queue, McOpenSender
in	*source*	PCSTR - the sender of this forwarding message.

in	*iCmd*	UI_32 - Command Id message to forward
in	*USID*	UI_32 - Unique Shared memory Id

Return values:

E_CWORD33_Status	indicates if the close was successfully CONST char* - constant pointer to source message queue
Success(e_CWORD33_StatusOK)	
Failed(anything	else)

Preconditons

none

Change of internal status

The internal state is not changed.

Classification

Public

Type

Sync only

See also:

E_CWORD33_Status McGetDataOfSize (PVOID *data*, PVOID *to*, UI_32 *uiSize*)

Brief

Get the message data, this may be from a queue or shared memory where the maximum size of the data should not exceed the maximum size passed in. And deletes the data if it is stored in shared memory.

Parameters:

in	*data*	PVOID - pointer to the data was received from the McReceive Call
in	*to*	PVOID - pointer to the data to be received
in	*uiSize*	UI_32 - maximum size of the buffer to which the received data is copied

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK	- success
e_CWORD33_StatusInvldBuf	- invalid buffer
e_CWORD33_StatusInvldHandle	- invalid handle
e_CWORD33_StatusInvldHndlType	- invalid handle type
e_CWORD33_StatusInvldBufSize	- invalid buffer size
e_CWORD33_StatusErrOther	- invalid shared memory ID specified by received message

Preconditons

Message is received by McReceive and so on.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McGetLength

E_CWORD33_Status McGetDataOfSizeWithSMRetain (PVOID *data*, PVOID *to*, UI_32 *uiSize*)

Brief

Get the message data, this may be from a queue or shared memory where the maximum size of the data should not exceed the maximum size passed in. Does not delete the data if it is stored in shared memory.

Parameters:

in	*data*	PVOID - pointer to the data was received from the McReceive Call
in	*to*	PVOID - pointer to the data to be received
in	*uiSize*	UI_32 - maximum size of the buffer to which the received data is copied

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK	- success
e_CWORD33_StatusInvldBuf	- invalid buffer
e_CWORD33_StatusInvldHandle	- invalid handle
e_CWORD33_StatusInvldHndlType	- invalid handle type
e_CWORD33_StatusInvldBufSize	- invalid buffer size
e_CWORD33_StatusErrOther	- invalid shared memory ID specified by received message

Preconditons

Message is received by McReceive and so on.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McReceive

PVOID McGetDataPointer (PVOID *data*)

Brief

Get header address of data from received message.

Parameters:

in	*data*	PVOID - received message data

Return values:

PVOID	- data address of received message

Preconditons

Message is received by McReceive and so on.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McReceive, McReceiveWithSession, McGetDataOfSize

TMemID McGetDataUSID (PVOID *pData*)

Brief

Get the USID is the Unique Shared Memory ID.e. from the message that was received.

Parameters:

in	*pData*	void* - pointer to the data was received from the McReceive Call

Return values:

TMemID	Type of memory buffer identifiers(unsigned int).
NoneZero(Success)	
Zero(Failed)	

Preconditons

none

Change of internal status

The internal state is not changed.

Classification

Public

Type

Sync only

See also:

UI_32 McGetLength (PVOID *data*)

Brief

Get the length of data that needs to be retrieved.

Parameters:

in	*data*	PVOID - pointer to the data was received from the McReceive Call

Return values:

UI_32	indicates the number of bytes that in the message

if return is 0 or less then invalid data was passed.

Preconditons

Message is received by McReceive and so on.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McReceive, McReceiveWithSession, McGetDataOfSize

PCSTR McGetMsgSrc (PVOID *data*)

Brief

Gets the constant pointer to source message queue.

Parameters:

in	*data*	PVOID - pointer to the data to be received

Return values:

PCSTR	message queue's address CONST char* - constant pointer to source message queue
NotNull(Success)	
Null(Failed)	

Preconditons

none

Change of internal status

The internal state is not changed.

Classification

Public

Type

Sync only

See also:

int McGetQueueFD (HANDLE *hMessage*)

Brief

Gets the fd of the message queue.

Parameters:

in	*hMessage*	HANDLE - handle of the message queue.(handle created with McOpenReceiver or McOpenSender)

Return values:

int	fd - fd of the message queue if handle is valid else -1

Preconditons

- Dispatcher for application is created and initialized(_CWORD33_CreateDispatcherWithoutLoop) in advance

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenReceiver, McOpenSender

PCSTR McGetQueueName (HANDLE *hMessage*)

Brief

Gets the name of the message queue.

Parameters:

in	*hMessage*	HANDLE - handle of the message queue, (handle created

		with McOpenReceiver or McOpenSender)

Return values:

PCSTR	name - name of the message queue if handle is valid else NULL

Preconditons

Dispatcher for application should be created and initilized(_CWORD33_CreateDispatcherWithoutLoop)in advance

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenReceiver, McOpenSender

E_CWORD33_Status McGetSysInfoData (PVOID *data*, PVOID *to*)

Brief

Gets the data from system info buffer from message header.

Parameters:

in	*data*	PVOID - pointer to the data was received from the McReceive Call
out	*to*	PVOID - pointer to the data to be received

Return values:

E_CWORD33_Status	indicates if the close was successfully
e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldBuf	- Invalid buffer
e_CWORD33_StatusInvldHandle	- Invalid handle

Preconditons

Message is received by McReceive and so on.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McReceive, McReceiveWithSession

E_CWORD33_Status McInvokeSync (HANDLE *hMessage*, PCSTR *source*, UI_32 *cmd*, UI_32 *msgLength*, PCVOID *msgData*, UI_32 *sessionid*, HANDLE *hRcvMessage*, UI_32 *responseLength*, PVOID *responseData*, UI_32 * *receivedLength*)

Brief

Synchronous Invoke. Send data to message queue, and Receive data from message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the send message queue, McOpenSender
in	*source*	PCSTR - app (You) the sender
in	*cmd*	UI_32 - command id aka the message that's being sent
in	*msgLength*	UI_32 - length of the data buffer provided
in	*msgData*	PCVOID - pointer to the data to be sent
in	*sessionid*	UI_32 - session ID
in	*hRcvMessage*	HANDLE - handle to the receive message queue, McOpenSyncReceiver
in	*responseLength*	UI_32 - length of the responnce receive buffer provided
out	*responseData*	PVOID - pointer to the data to be receive
out	*receivedLength*	UI_32* - length of the data to be receive

Return values:

E_CWORD33_Status	indicates invoke response or message sent error or response receive error
e_CWORD33_StatusOK	- success
e_CWORD33_StatusInvldParam	- Invalid parameter
e_CWORD33_StatusInvldHandle	- Invalid handle
e_CWORD33_StatusInvldHndlType	- Invalid handle type
e_CWORD33_StatusInvldQName	- Invalid message queue name
e_CWORD33_StatusMsgQFull	- Message queue is full
e_CWORD33_StatusErrNoEBADF	- Invalid file descriptor
e_CWORD33_StatusErrNoEINTR	- An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	- Invalid buffer size
e_CWORD33_StatusInvldBuf	- Invalid buffer
e_CWORD33_StatusBadConnection	- Can't connect with Socket
e_CWORD33_StatusFail	- Some sort of error occurred
e_CWORD33_StatusErrOther	- other errors(Failed to open/allocate shared memory)

Preconditons

Message queue specified by argument hMessage and hRcvMessage is useful.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenSender, McOpenSyncReceiver, _CWORD33_InvokeSync

HANDLE McOpenReceiver (PCSTR *name*)

Brief

Opens a handle to a Receiver message queue.

Parameters:

in	*name*	PCSTR - name of the message queue you want to receiver messages on

Return values:

Handle	to a recevier's message queue (If INVALID_HANDLE is returned its an error)

Preconditons

none

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenSender, McReceive, McClose

HANDLE McOpenReceiverNotBlocked (PCSTR *name*)

Brief

Opens a handle to a Receiver message queue. Operations on this queue are non-blocking if queue is empty or full.

Parameters:

in	*name*	PCSTR - name of the message queue you want to receiver messages on

Return values:

Handle	to a recevier's message queue (If INVALID_HANDLE is returned its an error)

Preconditons

none

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenSender, McReceive, McClose, McOpenSenderNotBlocked

HANDLE McOpenSender (PCSTR *name*)

Brief

The opens a handle for sending messages to another message queue.

Parameters:

in	*name*	PCSTR - name of the message queue you want to send messages too

Return values:

Handle	for sending messages to a queue (If INVALID_HANDLE is returned its an error)

Preconditons

none

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenReceiver, McSend, McClose

HANDLE McOpenSenderNotBlocked (PCSTR *name*)

The opens a handle for sending messages to another message queue. operations on this queue are non-blocking if queue is empty or full.

Parameters:

in	*name*	PCSTR - name of the message queue you want to send messages too

Returns:

HANDLE handle - for sending messages to a queue (If INVALID_HANDLE is returned its an error)

HANDLE McOpenSyncReceiver (PCSTR *name*)

Brief

Opens a handle to a response Receiver message queue.

Parameters:

in	*name*	PCSTR - name of the message queue you want to receiver messages on

Return values:

Handle	to a recevier's message queue (If INVALID_HANDLE is returned its an error)

Preconditons

none

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McCreateInvokerName, McInvokeSync, McClose

HANDLE McOpenSyncSender (PCSTR *name*)

Brief

The opens a handle for sending responce to another message queue.

Parameters:

in	*name*	PCSTR - name of the message queue you want to send messages too

Return values:

Handle	for sending response to a queue (If INVALID_HANDLE is returned its an error)

Preconditons

none

Change of internal status

none

McOpenReceiver, McSend, McClose

E_CWORD33_Status McReceive (HANDLE *hMessage*, PSTR *source*, UI_32 * *cmd*, UI_32 *length*, PVOID *data*)

Brief

Retrieves data from a message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the recvMessage, McOpenRecevier
out	*source*	PSTR - app that sent this message
out	*cmd*	UI_32* - command message that has been received.
in	*length*	UI_32 - length of the data buffer provided
out	*data*	PVOID - pointer to the data to be received

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	- Invalid handle
e_CWORD33_StatusInvldBuf	- Invalid buffer
e_CWORD33_StatusInvldQName	- Invalid message queue name
e_CWORD33_StatusInvldParam	- Invalid parameter
e_CWORD33_StatusErrNoEBADF	- Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	- An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	- Invalid buffer-size
e_CWORD33_StatusFail	- Invalid handle of message queue for receiving message

Preconditons

Message queue(McOpenReceiver etc.) for receiving message is created.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenReceiver, McSend

E_CWORD33_Status McReceiveWithSession (HANDLE *hMessage*, PSTR *source*, UI_32 * *cmd*, UI_32 * *sessionid*, UI_32 *length*, PVOID *data*)

Brief

Retrieves data from a message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the recvMessage, McOpenRecevier
out	*source*	PSTR - app that sent this message
out	*cmd*	UI_32* - command message that has been received.
out	*sessionid*	UI_32* - Session ID
in	*length*	UI_32 - length of the data buffer provided
out	*data*	PVOID - pointer to the data to be received

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldHandle	- Invalid handle
e_CWORD33_StatusInvldBuf	- Invalid buffer
e_CWORD33_StatusInvldQName	- Invalid message queue name
e_CWORD33_StatusInvldParam	- Invalid parameter
e_CWORD33_StatusErrNoEBADF	- Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	- An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	- Invalid buffer-size
e_CWORD33_StatusFail	- Invalid handle of message queue for receiving message

Preconditons

Message queue(McOpenReceiver etc.) for receiving message is created.

Change of internal status

none

Classification

Public

Type

Sync only

See also:

McOpenReceiver, McSendWithSession

E_CWORD33_Status McSend (HANDLE *hMessage*, PCSTR *source*, UI_32 *cmd*, UI_32 *length*, PCVOID *data*)

Brief

Sends data to a message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the send message queue, McOpenSender
in	*source*	PCSTR - app (You) the sender
in	*cmd*	UI_32 - command id aka the message that's being sent
in	*length*	UI_32 - length of the data buffer provided
in	*data*	PCVOID - pointer to the data to be sent

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK	- Success
e_CWORD33_StatusNullPointer	- NULL pointer specified
e_CWORD33_StatusInvldHandle	- Invalid handle
e_CWORD33_StatusInvldHndlType	- Invalid type of handle
e_CWORD33_StatusInvldQName	- Illegal Message Queue name
e_CWORD33_StatusMsgQFull	- Message queue is full
e_CWORD33_StatusErrNoEBADF	I- nvalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	- An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	- Invalid buffer-size
e_CWORD33_StatusFail	- Some sort of error occurred
e_CWORD33_StatusErrOther	- other errors(Failed to open/allocate shared memory)
e_CWORD33_StatusInvldParam	- Invalid parameter

Preconditons

Message queue(McOpenSender) for sending message is created.

Change of internal status

none

Classification

Public

Type

Sync only

E_CWORD33_Status McSendSyncResponse (HANDLE *hMessage*, PCSTR *source*, UI_32 *cmd*, UI_32 *seq_id*, E_CWORD33_Status *ret_val*, UI_32 *length*, PCVOID *data*)

Brief

Sends response to a message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the send message queue, McOpenSyncSender
in	*source*	PCSTR - app (You) the sender
in	*cmd*	UI_32 - command id aka the message that's being sent
in	*seq_id*	UI_32 - response sequence ID
in	*ret_val*	E_CWORD33_Status - response status
in	*length*	UI_32 - length of the data buffer provided
in	*data*	PCVOID - pointer to the data to be sent

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusInvldHandle	- If handle is NULL or invalid
e_CWORD33_StatusInvldHndlType-if	handle type is invalid
e_CWORD33_StatusInvldQName	- if MQ name is invalid
e_CWORD33_StatusMsgQFull	- if MQ is full
e_CWORD33_StatusErrNoEBADF	- if fd is invalid
e_CWORD33_StatusErrNoEINTR	- if system call(signal) interupt occurs
e_CWORD33_StatusInvldBufSize	-if buffer size is invalid
e_CWORD33_StatusInvldBuf	-if buffer is invalid
e_CWORD33_StatusFail	- any other error
e_CWORD33_StatusErrOther	-other error(memory open/allocate fail)

E_CWORD33_Status McSendWithPriority (HANDLE *hMessage*, PCSTR *source*, UI_32 *cmd*, UI_32 *length*, PCVOID *data*, E_CWORD33_MessagePriorties *priority*, UI_32 *sessionid*)

Brief

Sends data to a message queue, inserts based on priority given.

Parameters:

in	*hMessage*	HANDLE - handle to the send message queue, McOpenSender
in	*source*	PCSTR - app (You) the sender
in	*cmd*	UI_32 - command id aka the message that's being sent
in	*length*	UI_32 - length of the data buffer provided
in	*data*	PCVOID - pointer to the data to be sent
in	*sessionid*	UI_32 - session id

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK(success)	
e_CWORD33_StatusFail(anything	else)

E_CWORD33_Status McSendWithSession (HANDLE *hMessage*, PCSTR *source*, UI_32 *cmd*, UI_32 *length*, PCVOID *data*, UI_32 *sessionid*)

Brief

Sends data to a message queue.

Parameters:

in	*hMessage*	HANDLE - handle to the send message queue, McOpenSender
in	*source*	PCSTR - app (You) the sender
in	*cmd*	UI_32 - command id aka the message that's being sent
in	*length*	UI_32 - length of the data buffer provided

in	*data*	PCVOID - pointer to the data to be sent
in	*sessionid*	UI_32 - session id

Return values:

E_CWORD33_Status	indicates if the message was sent successfully
e_CWORD33_StatusOK	- Success
e_CWORD33_StatusNullPointer	- NULL pointer specified
e_CWORD33_StatusInvldHandle	- Invalid handle
e_CWORD33_StatusInvldHndlType	- Invalid type of handle
e_CWORD33_StatusInvldQName	- Illegal Message Queue name
e_CWORD33_StatusMsgQFull	- Message queue is full
e_CWORD33_StatusErrNoEBADF	- Invalid File-Descriptor
e_CWORD33_StatusErrNoEINTR	- An interrupt is generated by the system call (signal)
e_CWORD33_StatusInvldBufSize	- Invalid buffer-size
e_CWORD33_StatusFail	- Some sort of error occurred
e_CWORD33_StatusErrOther	- other errors(Failed to open/allocate shared memory)
e_CWORD33_StatusInvldParam	- Invalid parameter

Preconditons

Message queue(McOpenSender) for sending message is created.

UI_64 MSToNS (UI_32 *ms*)

Brief

Converts mil seconds to nano seconds.

Parameters:

in	*ms*	UI_32 - time value in mil seconds

Return values:

Number	of nano seconds there are in mil seconds in the number passed.

Preconditons

Change of internal status

Classification

Type

See also:

none

HANDLE NS_TimerCreate (NSTimerInfo *timer_info*, eNSTimerCallbackMechanism *cbMech*, HANDLE *sndMqHndl*)

Brief

to create an instance of a timer object, and start it

Parameters:

in	*timer_info*	NSTimerInfo - timer value represents an absolute expiration timeout
in	*cbMech*	eNSTimerCallbackMechanism - CALLBACKMECHANISM_ENUM - specifies the callback mechanism associated with the timer CALLBACK_MESSAGE will send a message to a message queue

in	*sndMqHndl*	HANDLE - implies a MESSAGE QUE HANDLE generated by McOpenSender() is specified

Return values:

Handle	to the timer object or NULL on failure

Preconditons

Change of internal status

Classification

Type

See also:

NS_TimerDelete,NS_TimerSetTime

void NS_TimerDebugOn (BOOL *FlagState*)

Brief

to make a flag for the debugging process. for debug.

Parameters:

in	*FlagState*	BOOL - DebugFlag state

Return values:

none	

Preconditons

Change of internal status

Classification

Type

See also:

none

E_CWORD33_Status NS_TimerDelete (HANDLE *hTimer*)

Brief

to delete an instance of a timer object

Parameters:

in	*hTimer*	HANDLE - a timer handle that was created via NS_TimerCreate

Return values:

E_CWORD33_Status	indicates if the timer handle was delete successfully
e_CWORD33_StatusOK	
e_CWORD33_StatusFail	
e_CWORD33_StatusInvldParam	

Preconditons

Change of internal status

Classification

Type

See also:

NS_TimerCreate, NS_TimerSetTime

E_CWORD33_Status NS_TimerGetTime (HANDLE *hTimer*, NSTimerInfo * *timer_info*)

Brief

to retrieve the time until a timer expires

Parameters:

in	*hTimer*	HANDLE - handle to timer that your trying to get information about
out	*timer_info*	NSTimerInfo* - a structure to store the delay time until the timer expires

Return values:

E_CWORD33_Status	indicates if the timer info was get successfully
e_CWORD33_StatusOK	
e_CWORD33_StatusInvldHandle	
e_CWORD33_StatusFail	

Preconditons

Change of internal status

Classification

Type

See also:

NS_TimerCreate, NS_TimerSetTime

E_CWORD33_Status NS_TimerSetTime (HANDLE *hTimer*, NSTimerInfo *timer_info*)

Brief

to start or stop a timer by setting the time interval associated with a timer, value of 0 in t_sec & t_nsec, will stop the timer.

Parameters:

in	*hTimer*	HANDLE - handle to timer that your specifying the timer to be set
in	*timer_info*	NSTimerInfo - timer value represents an absolute expiration timeout

Return values:

E_CWORD33_Status	indicates if the timer info was set successfully
e_CWORD33_StatusOK	
e_CWORD33_StatusInvldHandle	
e_CWORD33_StatusFail	

Preconditons

the timer must have already been created with NS_TimerCreate

Change of internal status

Type

Fire and Forget

See also:

none

void NsLog_EvtCnt (UI_16 *Cnt_Id*, UI_16 *Evt_Id*, UI_8 *n*, ...)

Brief

Event and count logger.

Parameters:

in		

void NsLogData (const UI_16 *f_uiZoneIndex*, PCSTR *data*, UI_32 *size*)

Brief

log print-out function

Parameters:

in	*f_uiZoneIndex*	const UI_64 - Mask value(0511) to check against
in	*data*	PCSTR -log print-out data
in	*size*	(0ULONG_MAX) UI_32 - data size (0ULONG_MAX)

Return values:

none	void - there is no return.

Prerequisite

_CWORD33_LOG has already set by NsLogSet_CWORD33_LogParams

Change of internal state

None

Classification

Public

Type

No match

See also:

none

UI_8 NsLogDetermineLogMethod (PCSTR *output_type*)

Brief

Determines the control log method based on the string passed. If the string passed doesn't match any of the key words: slogger or msgr or console the method will return a value of zero. This string may be in the form of the following: "msgq|console" would cause the output to go to both the NSLog message queue and the console.

Parameters:

in	*output_type*	PCSTR - The key words:

Return values:

1	... 0xF Success
0	the string passed doesn't match any of the key words

Prerequisite

none

Change of internal state

none

Classification

Public

Type

No match

See also:

VOID NSLogEnablePLog (BOOL *f_bEnable*)

NSLogEnablePLog Enables/Disables the performance logging

Parameters:

in	*f_bEnable*	BOOL - TRUE- Enable performance logging, FALSE - Disable

Returns:

none

VOID NSLogEnableSysEventLog (BOOL *f_bEnable*)

NSLogEnableSysEventLog Enables/Disables the system event logging

Parameters:

in	*f_bEnable*	BOOL - TRUE- Enable system event logging, FALSE - Disable

Returns:

none

PCSTR NSLogGet_CWORD33_logFileName (UI_32 *index*)

Brief

get the name of log file

Parameters:

in	*index*	UI_32 - Index of a list of _CWORD33_log file names.(0 NSLogGet_CWORD33_logFileTotalNum()-1)

Return values:

file	name -file with specific index is exsisted
NULL	-file with specific index is not exsisted

Prerequisite

set log file using NsLogSet_CWORD33_LogParams

Change of internal state

none

Classification

Public

Type

No macth

See also:

none

UI_32 NSLogGet_CWORD33_logFileTotalNum (void)

Brief

get total number of log file

Return values:

num	UI_32 - Total numger of _CWORD33_log files.

Prerequisite

set log file using NsLogSet_CWORD33_LogParams

Change of internal state

none

Classification

Public

Type

No match

See also:

none

E_CWORD33_Status NsLogGet_CWORD33_LogFlag (UI_8 *flag_id*, UI_8 * *mode*)

Brief

get LogLevel of _CWORD33_LOG flag

Parameters:

in	*flag_id*	UI_8 - index for _CWORD33_LOG flag(0FLAG_LIST(declared in _CWORD33_LOG CONFIG file)
out		

int NSLogGet_CWORD33_logIndex (PCSTR *filename*)

Brief

get index of log file

Parameters:

in	*filename*	PCSTR - Name of _CWORD33_log file.

Return values:

0	log file specific logfile is not exsisted
index	of log file specific logfile is exsisted

Prerequisite

set log file using NsLogSet_CWORD33_LogParams

Change of internal state

none

Classification

Public

Type

No match

See also:

none

void NsLogGetControlMask (T_CWORD33_ZoneMask *p_Zonemask_i*)

Brief

Get the control word that you currently have set.

Parameters:

out	*p_Zonemask_i*	T_CWORD33_ZoneMask - current mask value.

T_CWORD33_ZoneMask Array

```
1 typedef T_CWORD33_Zone T_CWORD33_ZoneMask[ZONE_MASK_ARRAY_ELTS];
```

T_CWORD33_Zone typedef

```
1 UI_32 T_CWORD33_Zone;  // 32bit
```

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

Classification

Public

Type

No match

See also:

NsLogSetControlMask

UI_8 NsLogGetLogMethod (void)

Brief

Get the logging method.

Parameters:

None	

Return values:

-	return the way you log your data. UI_8 - Log data typeNS_LoggingMethod_t Enum.

NS_LoggingMethod_t Enum

```
1 typedef enum _NS_LOGGER_METHODS {
2   LPRINT      = ***,       // Print to the console(similar to printf)
3   LMSGQ       = ***,       // Disabled
4   LSLOGGER    = ***,       // Disabled
5   LSHAREDMEM  = ***        // Output to shared memory. this is the default logging method.
6  } NS_LoggingMethod_t;
```

Prerequisite

none

Change of internal state

The internal state is not changed.

Classification

Public

Type

Sync only

See also:

NsLogSetLogMethod

void NsLogGetRealtimeLog (UI_8 * *mode*)

Brief

get the setting of real-time log output

Parameters:

out	*mode*	UI_8 * -the setting of real-time log output

available settings of real-time log output default value is REALTIME_LOG in _CWORD33_LOG CFG file (_CWORD33_LOG_REALTIMELOG_MODE_OFF when _CWORD33_LOG CFG file get failed)

```
1 #define _CWORD33_LOG_REALTIMELOG_MODE_UART       1     // : UARTOUT
```

```
2 #define _CWORD33_LOG_REALTIMELOG_MODE_USB        2     // : USB OUT
3 #define _CWORD33_LOG_REALTIMELOG_MODE_USB_DISABLE 0x82  // : USB OFF
4 #define _CWORD33_LOG_REALTIMELOG_MODE_ETHER      3     // : Ether OUT
5 #define _CWORD33_LOG_REALTIMELOG_MODE_OFF        0     // : ALL OFF
6 #define _CWORD33_LOG_REALTIMELOG_MODE_FREEZE     0xFF  // : FREEZE
```

Return values:

none	void - there is no return

Prerequisite

void NsLogInitialize (void)

Brief

Initialize the log level and real-time log out-put setting

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

none

Classification

Public

Type

No match

See also:

none

BOOL NsLogIsPLogEnabled (void)

Brief

Is Enables/Disables the performance logging

Return values:

TRUE	current state of plog enable.
FALSE	current state of plog disable.

Prerequisite

Change of internal state

Classification

Public

Type

No match

See also:

NSLogEnablePLog

BOOL NSLogIsSysEventLogEnabled (void)

NSLogIsSysEventLogEnabled Is Enables/Disables the system event logging

Returns:

SysEventLogEnabled BOOL - current state of sys event log(enable/disable).

BOOL NsLogIsZoneSet (UI_32 *set_zone*)

Brief

check wheather the _CWORD33_LOG ZONE is set by your application process.

Parameters:

in	*set_zone*	UI_32 - checking zone_index

Return values:

TRUE	zone is enable
FALSE	zone is disable

Prerequisite

none

Change of internal state

Classification

Public

Type

No match

See also:

void NsLogSet_CWORD33_LogFlag (UI_8 *flag_id*, UI_8 *mode*)

Brief

set LogLevel of _CWORD33_LOG flag

Parameters:

in	*flag_id*	UI_8 - index for _CWORD33_LOG flag(0FLAG_LIST(declared in _CWORD33_LOG CONFIG file)
in	*mode*	UI_8 - LogLevel

avaliable LogLevel
_CWORD33_LOG_FLAG_MODE_RELEASE
_CWORD33_LOG_FLAG_MODE_DEBUG

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

none

Classification

Public

Type

Sync only

See also:

NsLogGet_CWORD33_LogFlag

void NsLogSet_CWORD33_LogParams (_CWORD33_LOGPARAM * *p__CWORD33_LogParams*)

Brief

Sets the _CWORD33_LOG parameter of your application based on the value passed in.

Parameters:

in	*p__CWORD33_LogParams*	_CWORD33_LOGPARAM * - _CWORD33_LOG parameter in process

_CWORD33_LOGPARAM Structure

```
1 typedef struct __CWORD33_LOGPARAM {
2   UI_8 uiLogOptions;                          // output options (ref. NS_LoggingMethod_t )
3   CHAR cZones[USER_ZONES_COUNT][ZONE_TEXT_SIZE];  // mask text ZONE_TEXT_10 ... ZONE_TEXT_n
4   // mask options ZONEMASK(10)...ZONEMASK(n) (ref. T_CWORD33_Zone)
5   T_CWORD33_ZoneMask uiZoneMask;
6   T_CWORD33_LoggerSeverity eSeverity;                 // severity level(ref. T_CWORD33_LoggerSeverity)
7  } _CWORD33_LOGPARAM, *LP_CWORD33_LOGPARAM;
```

T_CWORD33_ZoneMask Array

```
1 typedef T_CWORD33_Zone T_CWORD33_ZoneMask[ZONE_MASK_ARRAY_ELTS];
```

T_CWORD33_Zone typedef

```
1 UI_32 T_CWORD33_Zone;  // 32bit
```

T_CWORD33_LoggerSeverity Enum

```
1 typedef enum _T_CWORD33_LoggerSeverity {
2   _CWORD33__SEVERITY_LOW  = ***,  // all enable(default)
3   _CWORD33__SEVERITY_DEBUG2,      // enable _CWORD33_LOG_DEBUG() and _CWORD33_LOG_DEBUG2()
and all the follows
4   _CWORD33__SEVERITY_DEBUG1,      // enable _CWORD33_LOG_DEBUG1() and all the follows
5   _CWORD33__SEVERITY_INFO,        // enable _CWORD33_LOG_INFO() and all the follows
6   _CWORD33__SEVERITY_WARN,        // enable _CWORD33_LOG_WARN() and all the follows
7   _CWORD33__SEVERITY_ERROR,       // enable _CWORD33_LOG_ERROR() and all the follows
8   _CWORD33__SEVERITY_FATAL,       // enable _CWORD33_LOG_FATAL() and _CWORD33_LOG_ALWAYS()
9   _CWORD33__SEVERITY_ALWAYS       // enable _CWORD33_LOG_ALWAYS()
10 } T_CWORD33_LoggerSeverity;
```

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

none

Classification

Public

Type

No match

See also:

none

void NsLogSetControlMask (T_CWORD33_ZoneMask *p_ulNSLogControl_i*)

Brief

Sets the control word that should be logged

Parameters:

in	*p_ulNSLogControl_i*	T_CWORD33_ZoneMask - Set mask to the new value.

T_CWORD33_ZoneMask Array

```
1 typedef T_CWORD33_Zone T_CWORD33_ZoneMask[ZONE_MASK_ARRAY_ELTS];
```

T_CWORD33_Zone typedef

```
1 UI_32 T_CWORD33_Zone;  // 32bit
```

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

none

Classification

Public

Type

No match

See also:

NsLogGetControlMask

void NsLogSetLogMethod (UI_8 *p_eMethod_i*)

Brief

Sets the logging place, LPRINT, LSHAREDMEM or any combination of these. If this is never called the default is LSHAREDMEM.

Parameters:

in	*p_eMethod_i*	UI_8 - Where you would like to log your data.

NS_LoggingMethod_t Enum

```
1 typedef enum _NS_LOGGER_METHODS {
2   LPRINT      = ***,       // Print to the console(similar to printf)
3   LMSGQ       = ***,       // Disabled
4   LSLOGGER    = ***,       // Disabled
5   LSHAREDMEM  = ***        // Output to shared memory. this is the default logging method.
6  } NS_LoggingMethod_t;
```

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

-switch the out-put place for NsLog API

Classification

Public

Type

No match

See also:

NsLogGetLogMethod

VOID NSLogSetPlogOutputOptions (UI_8 *f_uiPlogOutputOption*)

NSLogSetPlogOutputOptions Set the output options for performance logging.

Parameters:

in	*f_uiPlogOutputOption*	UI_8 - Output option. Value is generated by or'ed value of enum EPLOG_OUTPUT_OPTION e.g. EPLOG_SLOG | EPLOG_MSGQ

Returns:

none

VOID NSLogSetPlogTimeFormat (EPLOG_TIME_FORMAT *f_ePlogTimeFormat*)

NSLogSetPlogTimeFormat Set the time format for performance logging.

Parameters:

in	*f_ePlogTimeFormat*	EPLOG_TIME_FORMAT - Time format for performance logging

Returns:

none

void NsLogSetProcessName (PCSTR *p_strProcessName_i*)

Brief

Sets the name of your application based on the value passed in.

Parameters:

in	*p_strProcessName_i*	PCSTR - name of your application process.(string array ended by NULL below 20byte)

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

none

Classification

Public

Type

No match

See also:

none

void NsLogSetRealtimeLog (UI_8 *mode*)

Brief

real-time log output setting

Parameters:

in	*mode*	UI_8 - set mode for Real time log

available setting for real-time log output default value is REALTIME_LOG in _CWORD33_LOG CFG file (_CWORD33_LOG_REALTIMELOG_MODE_OFF when _CWORD33_LOG CFG file get failed)

```
1 #define _CWORD33_LOG_REALTIMELOG_MODE_UART       1     // : UARTOUT
2 #define _CWORD33_LOG_REALTIMELOG_MODE_USB        2     // : USB OUT
3 #define _CWORD33_LOG_REALTIMELOG_MODE_USB_DISABLE 0x82  // : USB OFF
4 #define _CWORD33_LOG_REALTIMELOG_MODE_ETHER      3     // : Ether OUT
5 #define _CWORD33_LOG_REALTIMELOG_MODE_OFF        0     // : ALL OFF
6 #define _CWORD33_LOG_REALTIMELOG_MODE_FREEZE     0xFF  // : FREEZE
```

Return values:

none	void - there is no return

Prerequisite

none

Change of internal state

none

Classification

Public

Type

Sync only

See also:

NsLogGetRealtimeLog

void NsLogSetSeverity (T_CWORD33_LoggerSeverity *p_eLogSeverity_i*)

Brief

Set log severity level

Parameters:

in	*p_eLogSeverity_i*	T_CWORD33_LoggerSeverity - Log severity

T_CWORD33_LoggerSeverity Enum

```
1 typedef enum _T_CWORD33_LoggerSeverity {
2   _CWORD33__SEVERITY_LOW  = ***,  /// <all enable(default)
3   _CWORD33__SEVERITY_DEBUG2,    /// <enable _CWORD33_LOG_DEBUG() and _CWORD33_LOG_DEBUG2()
and all the follows
4   _CWORD33__SEVERITY_DEBUG1,    /// <enable _CWORD33_LOG_DEBUG1() and all the follows
5   _CWORD33__SEVERITY_INFO,      /// <enable _CWORD33_LOG_INFO() and all the follows
6   _CWORD33__SEVERITY_WARN,      /// <enable _CWORD33_LOG_WARN() and all the follows
7   _CWORD33__SEVERITY_ERROR,     /// <enable _CWORD33_LOG_ERROR() and all the follows
8   _CWORD33__SEVERITY_FATAL,     /// <enable _CWORD33_LOG_FATAL() and _CWORD33_LOG_ALWAYS()
9   _CWORD33__SEVERITY_ALWAYS     /// <enable _CWORD33_LOG_ALWAYS()
10  } T_CWORD33_LoggerSeverity;
```

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

The internal state is not changed.

Classification

Public

Type

Sync only

See also:

NsLogGetSeverity

void NsLogSetZones (UI_32 *f_uiZoneCount*, ...)

Brief

set _CWORD33_LOG ZONE

Parameters:

in	*f_uiZoneCount*	UI_32 - number of zone
in	...	arg_list - zone list (0 ... 511)

Return values:

none	void - there is no return.

Prerequisite

none

Change of internal state

none

Classification

Public

Type

Set Get

See also:

none

VOID NSLogSysEvent (const UI_16 *f_ui16Line*, PCSTR *f_cFuncName*, PCSTR *__format*, ...)

NSLogSysEvent() Prints system event log in message queue NSSyseventlog.

Parameters:

in	*f_ui16Line*	const UI_16 - line number
in	*f_cFuncName*	PCSTR - Function name. It takes **PRETTY_FUNCTION**
in	*__format*	PCSTR - Input string

Returns:

none

void NsLogTime (const UI_16 *f_uiZoneIndex*, PCSTR *lpszFormat*)

Brief

Print out real-time in log using Native Service mechanism

Parameters:

in	*f_uiZoneIndex*	const UI_64 - Mask value(0511) to check against
in	*lpszFormat*	PCSTR - string similar to that of a printf statement

Return values:

none	void - there is no return.

Prerequisite

parameter _CWORD33_LOG has already set using NsLogSet_CWORD33_LogParams

Change of internal state

None

Classification

Public

Type

No match

See also:

none

E_CWORD33_Status NSSharedMemDumpTransmitLogToFile (PCSTR *f_pPath*, PUI_32 *f_puiDumpSize*)

Brief

Dump the transmit logging shared memory to file

Parameters:

in	*f_pPath*	PCSTR - full file path
in	*f_puiSize*	PCSTR - Size of data dumped to file

Return values:

e_CWORD33_StatusOK	if shared memory is closed

e_CWORD33_StatusFileLoadError	file path is incorrect
e_CWORD33_StatusSemLockFail/	e_CWORD33_StatusSemUnLockFail - mutex locking/unlocking error
e_CWORD33_StatusFail	shared memory is not open

SI_32 NSSharedMemReadTransmitLog (PSTR *f_pBuffer*, const UI_32 *f_uiLength*, const BOOL *f_bBlock*)

Brief

Reads transmit log from the shared memory buffer.

Parameters:

in	*f_pBuffer*	PSTR - pointer to the buffer in which data to be read.
in	*f_uiLength*	UI_32 - length of the data to be read.
in	*f_bBlock*	BOOL - TRUE - blocking call FALSE - non blocking call

Return values:

Except	NS_SHM_ERROR - Indicates the number of bytes read.
NS_SHM_ERROR	-if shared memory is not opened.

Except NS_SHM_ERROR:Success

See also:

NSSharedMemWriteTransmitLog

E_CWORD33_Status NSSharedMemTransmitLogClose ()

Brief

Close the transmit logging shared memory

Parameters:

in		

BOOL NSSharedMemTransmitLogIsOpen ()

Brief

This function is used to check whether the shared memory buffer is opened or not.

Return values:

TRUE	- Open
FALSE	- Not open

Preconditons

None

Change of internal status

-None

Classification

public

Type

Sync only

See also:

none

E_CWORD33_Status NSSharedMemTransmitLogOpen ()

Brief

Open the shared memory for transmit logging.

Parameters:

in		

SI_32 NSSharedMemWriteTransmitLog (PCSTR *f_pBuffer*, const UI_32 *f_uiLength*)

Brief

Write transmit log into the shared memory buffer.

Parameters:

in	*f_pBuffer*	PSTR - pointer to the buffer containing the data to be written.
in	*f_uiLength*	UI_32 - length of the data buffer to be written.

Return values:

Except	NS_SHM_ERROR - Indicates the number of bytes written,
NS_SHM_ERROR	-if shared memory is not opened.

NSSharedMemReadTransmitLog

UI_32 RemainderMs (UI_32 *ms*)

Brief

Get the number of remaining milseconds out of whole second for the number passed.

Parameters:

in	*ms*	UI_32 - time value in mil seconds

Return values:

Number	of remaining mil seconds in the number passed.

Preconditons

Change of internal status

Classification

Type

See also:

none

TMemID SetDataToShared (const void * *data*, UI_32 *dataBytes*, const char * *from*, const char * *to*)

Summary

Store a large chunk of memory using SharedMem service

Parameters:

in	*data*	18 const void* - data to be stored in shared memory
in	*dataBytes*	19 UI_32 - length of the data (in bytes) that is stored in shared memory
in	*from*	20 const char * - start address
in	*to*	21 const char * - end address

Return values:

TMemID	- unique MemID of the data stored in the shared memory, 0 if error occurs

Preconditions

None

Change of the internal state

shared memory changed

Class Documentation

Accumulator< T > Class Template Reference

Accumultor type.

#include <ns_utility.hpp>

Public Member Functions

Accumulator (T n)
template<typename U > **Accumulator** (const Accumulator< U > &u)
T **operator()** (T i=1)
template<typename U > T **operator()** (U i)

Friends

template<typename U > class **Accumulator**

Detailed Description

template<typename T>

class Accumulator< T >

Accumultor type.

An accumulator is an object that keeps an internal counter, and will increment its counter by n, which defaults to 1, each time operator() is called on it. Eample usage:

Accumulator< int > a(42); // initialize a to 42 int v1 = a(); // < v1 == *** int v2 = a(); // < v2 == *** int v4 = a(10); // < v4 == *** int v5 = a(); // < v5 == ***

virtual E_CWORD33_Status C_CWORD33__CWORD77_Service::AttachOpenSessionAckCallback (HANDLE *hApp*)[protected], [pure virtual]

AttachOpenSessionAckCallback virtual function to attche open session ack callback

Parameters:

in	*hApp*	HANDLE - Handle to the Framework

Returns:

status E_CWORD33_Status - Success or Error

E_CWORD33_Status C_CWORD33__CWORD77_Service::CloseServiceOnUnavailability (HANDLE *hApp*)

Brief

function to close session when service unavailable.

Parameters:

in	*f_hApp*	f_hApp - Handle to the Framework

f_hApp HANDLE*

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK or Error

Preconditons

nopreconditions

Change of internal status

set m_bServiceAvailable FALSE.

Classification

public

Type

sync only

See also:

CloseSession

void C_CWORD33__CWORD77_Service::CloseSession (HANDLE *f_hApp*)[protected]

Brief

Function to close sessions

Parameters:

in	*f_hApp*	f_hApp - Handle to the Framework

f_hApp HANDLE*

Return values:

none	

Preconditons

none

Change of internal status

The internal state is not changed.

Classification

public

Type

sync only

See also:

none

virtual void C_CWORD33__CWORD77_Service::EnableSession (UI_32 *f_uiNum*, UI_32 *f_uiFirst*, ...)[pure virtual]

Brief

virtual function to enable session in service

Parameters:

in	*f_uiNum*	f_uiNum - Number of arguments

f_uiNum UI_32

Parameters:

in	*f_uiFirst*	f_uiFirst - first argument

f_uiFirst UI_32

Return values:

None	

Preconditons

Change of internal status

The internal state is not changed.

Classification

public

Type

None

See also:

none

virtual E_CWORD33_Status C_CWORD33__CWORD77_Service::HandleServiceMessage (UI_32 *cmdID*)[pure virtual]

Brief

HandleMessage virtual function to process message coming from *CWORD77*

Parameters:

in	*cmdID*	cmdID - Request ID

cmdID UI_32

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK or Error

Preconditons

nopreconditions

Change of internal status

The internal state is not changed.

Classification

public

Type

none

See also:

none

E_CWORD33_Status C_CWORD33__CWORD77_Service::OnServiceNtf (HANDLE *hApp*)

Brief

unsubscribe notifications

Parameters:

in	*hApp*	hApp - Handle to the Framework.

hApp HANDLE*

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK or e_CWORD33_StatusNullPointer

Preconditons

nopreconditions

Change of internal status

none.

Classification

public

Type

sync only

See also:

_CWORD33_GetMsgDataOfSize, SetRespNotfnDataIn_CWORD77_DataPool

E_CWORD33_Status C_CWORD33__CWORD77_Service::OpenServiceOnAvailability (HANDLE *f_hApp*, const std::string & *f_sServiceName*)

Brief

function to open session with specified Service name when service available.

Parameters:

in	*f_hApp*	f_hApp - Handle to the Framework

f_hApp HANDLE*

Parameters:

in	*f_sServiceName*	f_sServiceName - service name

f_sServiceName - const std::string &

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK or Error

Preconditions

nopreconditions

Change of internal status

save Framework handler into m_hApp.

Classification

public

Type

sync only

See also:

AttachOpenSessionAckCallback, OpenSession

void C_CWORD33__CWORD77_Service::OpenSession (HANDLE *f_hApp*, const std::string & *f_sServiceName*)[protected]

Brief

Function to open sessions with specified Service Name

Parameters:

in	*f_hApp*	f_hApp - Handle to the Framework

f_hApp HANDLE*

Parameters:

in	*f_sServiceName*	f_sServiceName - Service Name

f_sServiceName - const std::string&

Return values:

none	

Preconditons

none

Change of internal status

Save service name into member variable.

Classification

public

Type

sync only

See also:

none

void C_CWORD33__CWORD77_Service::OpenSessionAcks (HANDLE *f_hApp*)

Brief

Acknowledgement process of open session

Parameters:

in	*f_hApp*	HANDLE - Handle to the Application

Return values:

none	

Preconditons

Set Session object in C_CWORD33__CWORD77_Service::SetSession()

Set Callback function in
C_CWORD33__CWORD77_Service::Set_CWORD77_OpenSessionACK()

Change of internal status

none

Classification

public

Type

none

See also:

SetSession,Set_CWORD77_OpenSessionACK

void C_CWORD33__CWORD77_Service::OpenSessionRetry (UI_32 *f_ui32SessionType*)[protected]

OpenSessionRetry This function sends open session request to the service m_cServiceName

Parameters:

in	*f_ui32SessionType*	UI_32 - Session type to open

Returns:

none

void C_CWORD33__CWORD77_Service::SendMessageToSession (UI_32 *f_uiSessionType*, UI_32 *f_uiSrvProtocol*)[protected]

application framework handle

Brief

Function to send message to a session

Parameters:

in	*f_uiSessionType*	UI_32 - session type
in	*f_uiSrvProtocol*	UI_32 - Protocol ID

Return values:

none	

Preconditons

C_CWORD33__CWORD77_Service::SetSession()

Change of internal status

The internal state is not changed.

Classification

public

Type

none

See also:

SetSession,_CWORD33_SendMsg

void C_CWORD33__CWORD77_Service::Set_CWORD77_OpenSessionACK (SessionAckTo_CWORD77_ *fptr*)

Brief

Attach open session ack callback function to service.

Parameters:

in	*fptr*	fptr - Callback Function pointer of notify open session ack.

fptr SessionAckTo_CWORD77_*

Preconditons

nopreconditions

Change of internal status

set callback function into m_cbSessionACK..

Classification

public

Type

sync only

See also:

none

void C_CWORD33__CWORD77_Service::SetResponseCallback (ResponseServiceTo_CWORD77_ *fptr*)

Brief

Set Call back function into Sessions.

Parameters:

in	*fptr*	fptr - Pointer to call back function

fptr ResponseServiceTo_CWORD77_*

Return values:

void C_CWORD33__CWORD77_Service::SetSession (C_CWORD33__CWORD77_Session * *f_pSessionObj*)

Brief

API to set session objects in service.

Parameters:

in	*f_pSessionObj*	f_pSessionObj - Pointer to an instance of session object.

f_pSessionObj C_CWORD33__CWORD77_Session*

Return values:

E_CWORD33_Status C_CWORD33__CWORD77_Service::SubscribeNotifications (HANDLE *hApp*)

Brief

Subscribe notifications.

Parameters:

in	*hApp*	hApp - Handle to the Framework.

hApp HANDLE*

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK or e_CWORD33_StatusInvldParam

Preconditons

nopreconditions

Change of internal status

save pointer of notifications into framework handler.

Classification

public

Type

sync only

See also:

_CWORD33_SubscribeNotificationWithCallback

E_CWORD33_Status C_CWORD33__CWORD77_Service::UnSubscribeNotifications (HANDLE *hApp*)

Brief

unsubscribe notifications

Parameters:

in	*hApp*	hApp - Handle to the Framework.

hApp HANDLE*

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK or e_CWORD33_StatusInvldParam

Preconditons

nopreconditions

Change of internal status

delete notifications from framework handler.

Classification

public

Type

sync only

See also:

Protected Attributes

ChildStateList * m_pChildStates

stores the pointers to sub state, key is state name

Additional Inherited Members

Detailed Description

This class implements the additional functionality supported by HSM Composite state. It provides the standard interfaces for adding state.

Constructor & Destructor Documentation

C_CWORD33_CompositeState::C_CWORD33_CompositeState (std::string *f_pName*)

Brief

Constructor for class C_CWORD33_CompositeState.

Parameters:

in	*f_strName*	std::string -Name of state

Return values:

virtual C_CWORD33_CompositeState::~C_CWORD33_CompositeState ()[virtual]

Brief

Destructor for C_CWORD33_CompositeState

Return values:

none	

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

C_CWORD33_State, C_CWORD33_CompositeState::C_CWORD33_CompositeState

---

Member Function Documentation

E_CWORD33_Status C_CWORD33_CompositeState::_CWORD33_AddState (C_CWORD33_State * *f_pState*, _CWORD33__STATE_TYPE *f_eStateType* = e_CWORD33_State)

Brief

sets the given state as a substate of the current state. If the f_eStateType is e_CWORD33_DefaultState then substate is default state for current state.

Parameters:

in	*f_pState*	C_CWORD33_State* - Pointer to the substate object to be added in the current state
in	*f_eStateType*	_CWORD33__STATE_TYPE - state type indicating if it is default state

Return values:

E_CWORD33_Status	success or fail

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

none

virtual C_CWORD33_State* C_CWORD33_CompositeState::_CWORD33_GetActiveState ()[virtual]

Brief

This interface returns the Active state of the current composite state. In case of non-composite state current state is active state

Parameters:

none	

Return values:

*C_CWORD33_State**	pointer of active state

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

C_CWORD33_State::_CWORD33_GetActiveState

Implements C_CWORD33_State.

C_CWORD33_State* C_CWORD33_CompositeState::_CWORD33_GetDefaultState ()

Brief

Returns the default state of the current composite state.

Parameters:

none	

Return values:

*C_CWORD33_State**	- pointer default state

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

none

virtual BOOL C_CWORD33_CompositeState::_CWORD33_HasSubStates ()[virtual]

Brief

This indicates if the state has sub states. It returns TRUE only in the CompositeState where this function is overridden

Parameters:

none	

Return values:

BOOL	TRUE - has substate FALSE - has not substatue

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

C_CWORD33_State::_CWORD33_HasSubStates

Reimplemented from C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_CompositeState::_CWORD33_OnEntry (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnEntry This is pure virtual function implemented by the derived classes of the application. state initialization can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implements C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_CompositeState::_CWORD33_OnExit (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnExit This is pure virtual function implemented by the derived classes of the application. state cleanup can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implements C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_CompositeState::_CWORD33_PrintStates ()[virtual]

Brief

Logs the state name and events associated with the state.

Parameters:

none	

Return values:

e_CWORD33_StatusOK	succ
e_CWORD33_StatusNullPointer	failed

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

none

Reimplemented from C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_CompositeState::_CWORD33_PrintXML (std::ostringstream & *f_strXMLString*)[virtual]

Brief

Update the State information in the given stream in the form of XML tags

Parameters:

f_strXMLString	std::ostringstream & - reference to the XML stream

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK e_CWORD33_StatusNullPointer

Preconditons

Self instance of C_CWORD33_CompositeState created.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal status

Self instance of C_CWORD33_CompositeState created failed.
[e_CWORD33_StatusNullPointer].

Classification

public

Type

none

See also:

C_CWORD33_State::_CWORD33_PrintXML

Reimplemented from C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_CompositeState::_CWORD33_SetHSM (C_CWORD33_HSM * *f_pStatemachine*)[protected], [virtual]

Brief

This Interface associates the gives statemachine with the current state

Parameters:

in	*f_pStatemachine*	C_CWORD33_HSM* - Statemachine associated with the state.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusNullPointer	NULL pointer exception

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

C_CWORD33_HSM

_CWORD33_SetHSM This Interface associates the gives statemachine with the current state

Parameters:

in	*f_pStatemachine*	C_CWORD33_HSM* - Statemachine associated with the state.

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Reimplemented from C_CWORD33_State.

E_CWORD33_Status C_CWORD33_CompositeState::UpdateHistory ()[virtual]

Brief

This function stores the last active state

Parameters:

none	

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK

Preconditons

Self instance of C_CWORD33_CompositeState created.

Change of internal status

none

Classification

public

Type

none

See also:

C_CWORD33_State::UpdateHistory

Implements C_CWORD33_State.

Detailed Description

this file has the C_CWORD33_HistoryState class definitions

Brief Introduction

This class implements the additional functionality supported by HSM History state.

Constructor & Destructor Documentation

C_CWORD33_HistoryState::C_CWORD33_HistoryState (std::string *f_pName*)

Brief

-Constructor of C_CWORD33_HistoryState.

Parameters:

in	*f_pName*	std::string - Name of the state

Return values:

None	

Preconditons

None

Change of internal status

None

Classification

Public

See also:

~C_CWORD33_HistoryState

C_CWORD33_HistoryState Parameterized constructor

Parameters:

in	*f_pName*	string - Name of the state

Returns:

none

virtual C_CWORD33_HistoryState::~C_CWORD33_HistoryState ()[virtual]

Brief

-Destructor of C_CWORD33_HistoryState.

Parameters:

None	

Return values:

None	

Preconditons

-Calls constructor to successfully create object.

Change of internal status

None

Classification

Public

See also:

C_CWORD33_HistoryState::C_CWORD33_HistoryState

~C_CWORD33_HistoryState Class destructor

Returns:

none

Member Function Documentation

virtual C_CWORD33_State* C_CWORD33_HistoryState::_CWORD33_GetActiveState ()[virtual]

Brief

Gets the pointor of this class.

Parameters:

None	

Return values:

None	

Preconditons

Calls constructor to successfully create object.

Change of internal status

None

Classification

Public

See also:

None

Implements C_CWORD33_State.

E_CWORD33_Status C_CWORD33_HistoryState::_CWORD33_OnEntry (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnEntry state initialization can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implements C_CWORD33_State.

E_CWORD33_Status C_CWORD33_HistoryState::_CWORD33_OnExit (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnExit state cleanup can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implements C_CWORD33_State.

virtual C_CWORD33_State* C_CWORD33_HistoryState::_CWORD33_OnHSMStart (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnHSMStart This function is called recursively till the leaf state is reached. This internally calls the Entry function of the current state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

Reimplemented from C_CWORD33_State.

virtual C_CWORD33_State* C_CWORD33_HistoryState::_CWORD33_OnHSMStop (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnHSMStop This function is called recursively till the required parent state is reached. This internally calls the Exit function of the current state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

Reimplemented from C_CWORD33_State.

E_CWORD33_Status C_CWORD33_HistoryState::SetDefaultHistory ()

Brief

This function sets the default active state in history state.

Parameters:

None	

Return values:

e_CWORD33_StatusOK	-Success
e_CWORD33_StatusNullPointer	- Null Pointer

Preconditons

-Calls constructor to successfully create object.

Change of internal status

None

Classification

Public

See also:

None

SetDefaultHistory This function sets the default active state in history state

Parameters:

virtual E_CWORD33_Status C_CWORD33_HistoryState::UpdateHistory ()[pure virtual]

Brief

This function stores the last active state.

Parameters:

None	

Return values:

E_CWORD33_Status	- Returns status of operation

Preconditons

-None

Change of internal status

None

Classification

Public

See also:

None

Implements C_CWORD33_State.

Implemented in C_CWORD33_ShallowHistoryState, and C_CWORD33_DeepHistoryState.

The documentation for this class was generated from the following file:

Public Attributes

UI_32 **m_uiCurrentEvent**

HANDLE m_pHApp

Application handle.

Detailed Description

This class implements interfaces for connecting child states to parent states, connecting events to state.

Constructor & Destructor Documentation

virtual C_CWORD33_HSM::~C_CWORD33_HSM ()[virtual]

Brief

Destructor for C_CWORD33_HSM

Return values:

none	

Preconditons

Self instance of C_CWORD33_HSM created.

Change of internal status

none

Classification

public

Type

none

See also:

none

~C_CWORD33_HSM Class destructor

Returns:

none

C_CWORD33_HSM::C_CWORD33_HSM ()

Brief

Constructor for class C_CWORD33_HSM.

Parameters:

C_CWORD33_HSM::C_CWORD33_HSM (PVOID *f_pHApp*)

Brief

Constructor for class C_CWORD33_HSM.

Parameters:

f_pHApp	PVOID - handle of application

Return values:

none	

Prerequisite

none

Change of internal state

none

Classification

public

Type

none

See also:

~C_CWORD33_HSM

C_CWORD33_HSM(PVOID f_pHApp) Class constructor

Returns:

none

Member Function Documentation

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Close (CEventDataPtr *f_pEventData* = boost::make_shared< CEventData >(0))

Brief

Stop the state machine.

Parameters:

f_pEventData	CEventDataPtr - Event data

Return values:

E_CWORD33_Status	
e_CWORD33_StatusNullPointer	null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_PostEvent(UI_32), CEventData, _CWORD33_QueueEvent, ProcessEvent

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Connect (C_CWORD33_State * *f_pParentState*, C_CWORD33_State * *f_pChildState*, UI_32 *f_uiEventId*, C_CWORD33_Reaction * *f_pReaction*, BOOL *f_eIsDefaultState* = FALSE, BOOL *f_eIsDeferredEventType* = FALSE, std::string *f_strEventName* = "")

34 (f_pChildState)

35 **Brief**

This connects the reaction to event and add event to child states then add child state to parent state.

36 **Parameters:**

f_pParentState	C_CWORD33_State* - Parent state pointer
f_pChildState	C_CWORD33_State* - Child state pointer
f_uiEventId	UI_32 - eventi id
f_pReaction	C_CWORD33_Reaction* - Reaction object for attaching to event
f_eIsDefaultState	BOOL - Does has default state.(default: FALSE)

37

TRUE : has default state
FALSE: not has default state

38 **Parameters:**

f_eIsDeferredEventType	BOOL - Does has the deferred event(default: FALSE)

39

TRUE : has the deferred event
FALSE: not has the deferred event

40 **Parameters:**

f_strEventName	std::string - name of event(default:"")

41 **Return values:**

e_CWORD33_StatusOK	succ
e_CWORD33_StatusNullPointer	null pointer

42 **Prerequisite**

Self instance of C_CWORD33_HSM created.

43 **Change of internal state**

none

44 **Classification**

public

45 **Type**

none

46 **See also:**

_CWORD33_Connect(C_CWORD33_State*,UI_32,C_CWORD33_Reaction*,std::string,BOOL), _CWORD33_Connect(C_CWORD33_State*,C_CWORD33_State*,BOOL)

47 _CWORD33_Connect This connects the reaction to event and add event to child states then add child state to parent state.

Parameters:

in	*f_pParentState*	C_CWORD33_State* - Parent state
in	*f_pChildState*	C_CWORD33_State* - Child state
in	*f_uiEventId*	UI_32 - Event id
in	*f_pReaction*	C_CWORD33_Reaction* - Reaction object for attaching to event
in	*f_eIsDefaultState*	BOOL - Defines if the state is default state
in	*f_eIsDeferredEventType*	BOOL - defines if the event is deferred event
in	*f_strEventName*	BOOL - Event name

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Connect (C_CWORD33_State * *f_pParentState*, C_CWORD33_State * *f_pChildState*, BOOL *f_eIsDefaultState* = FALSE)

Brief

This add child state to parent state.

Parameters:

f_pParentState	C_CWORD33_State* - Parent state pointer
f_pChildState	C_CWORD33_State* - Child state pointer
f_eIsDefaultState	BOOL - Does has default state.(default: FALSE)

TRUE : has default state
FALSE: not has default state

Return values:

e_CWORD33_StatusOK	succ
e_CWORD33_StatusNullPointer	null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_Connect(C_CWORD33_State*,UI_32,C_CWORD33_Reaction*,std::string,BOOL),

_CWORD33_Connect This add child state to parent state.

Parameters:

in	*f_pParentState*	C_CWORD33_State* - Parent state
in	*f_pChildState*	C_CWORD33_State* - Child state
in	*f_eIsDefaultState*	BOOL - Defines if the state is default state

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Connect (C_CWORD33_State * *f_pState*, UI_32 *f_uiEventId*, C_CWORD33_Reaction * *f_pReaction*, std::string *f_strEventName* = "", BOOL *f_eIsDeferredEventType* = FALSE)

Brief

This connects the reaction to event and add event to states.

Parameters:

f_pState	C_CWORD33_State* - pointer of state class
f_uiEventId	UI_32 - eventi id
f_pReaction	C_CWORD33_Reaction* - Reaction object for attaching to event
f_eIsDefaultState	BOOL - Does has default state.(default: FALSE)

TRUE : has default state
FALSE: not has default state

Parameters:

f_eIsDeferredEventType	BOOL - Does has the deferred event(default: FALSE)

TRUE : has the deferred event
FALSE: not has the deferred event

Parameters:

f_strEventName	std::string - name of event(default:"")

Return values:

e_CWORD33_StatusOK	succ

e_CWORD33_StatusNullPointer	null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_Connect(C_CWORD33_State*,C_CWORD33_State*,UI_32,C_CWORD33_Reaction*,BOOL,BOOL,std::string)

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Connect (C_CWORD33_State * *f_pRootState*)

Brief

This sets the givens state as root state in the state machine

Parameters:

f_pRootState	C_CWORD33_State* - Root state

Return values:

e_CWORD33_StatusOK	succ
e_CWORD33_StatusNullPointer	null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_Connect(C_CWORD33_State*,C_CWORD33_State*,UI_32,C_CWORD33_Reaction*,BOOL,BOOL,std::string)

_CWORD33_Connect This sets the givens state as root state in the state machine

Parameters:

in	*f_pRootState*	C_CWORD33_State* - Root state

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_ConnectOrthogonal (C_CWORD33_OrthogonalState * *f_pOrthogonalState*, C_CWORD33_CompositeState * *f_pOrthogonalRegion*)

Brief

Set Composite state as HSM state OrthogonalState.

Parameters:

f_pOrthogonalState	C_CWORD33_OrthogonalState* - Orthogonal state pointer
f_pOrthogonalRegion	C_CWORD33_CompositeState* - Composite state pointer

Return values:

e_CWORD33_StatusOK	succ
e_CWORD33_StatusNullPointer	null pointer(process failed)

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_Connect This sets the givens state as root state in the state machine

Parameters:

in	*f_pOrthogonalState*	C_CWORD33_OrthogonalState* - Orthogonal state
in	*f_pOrthogonalRegion*	C_CWORD33_CompositeState* - Orthogonal region

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

virtual E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Create (PVOID *f_pEventData* = NULL)[pure virtual]

Brief

This is pure virtual function to be implemented by the derived classes. Statemachine states and events created and connected in this interface.

Parameters:

f_pEventData	PVOID - Event data

Return values:

E_CWORD33_Status	Returns status of operation

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

none

Implemented in C_CWORD33_HSMChildFramework, C_CWORD33_HSMParentFramework, and C_CWORD33_HSMFramework.

C_CWORD33_State* C_CWORD33_HSM::_CWORD33_GetActiveState ()

Brief

Returns the active state of the statemachine

Parameters:

none	

Return values:

*C_CWORD33_State**	- Returns ActiveState
NULL	- failed

Prerequisite

Self instance of C_CWORD33_HSM created and active state exist.

Change of internal state

none

Classification

public

Type

none

See also:

C_CWORD33_State:: _CWORD33_GetActiveState

HANDLE C_CWORD33_HSM::_CWORD33_GetAppHandle ()

Brief

This interface returns the application handle

Parameters:

none	

Return values:

HANDLE	application handle

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

none

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_PostEvent (UI_32 *f_uiEventId*)

Brief

This creates the default event data and sends the event to the active HSM state.

Parameters:

f_uiEventId	UI_32 - Event Id

Return values:

e_CWORD33_StatusOK	add succ
e_CWORD33_StatusNullPointer	set null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_PostEvent(CEventDataPtr), CEventData, _CWORD33_QueueEvent, ProcessEvent

_CWORD33_PostEvent This creates the default event data and sends the event to the active HSM state.

Parameters:

in	*f_uiEventId*	UI_32 - Event Id

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_PostEvent (CEventDataPtr *f_pEventData*)

Brief

Add event data into event queue of state machine.

Parameters:

f_pEventData	CEventDataPtr - Event data

Return values:

e_CWORD33_StatusOK	add succ
e_CWORD33_StatusNullPointer	set null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_PostEvent(UI_32), CEventData, _CWORD33_QueueEvent, ProcessEvent

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_PrintAllStates ()

Brief

Output log of all states and events name associated with every state.

Parameters:

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_PrintXML ()

Brief

Output statemachine information into XML file.

Parameters:

none	

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK succ

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

none

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_QueueEvent (CEventDataPtr *f_pEventData*)

Brief

Push the event in the post event list.

Parameters:

f_pEventData	CEventDataPtr - pointer of event data

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK succ e_CWORD33_StatusNullPointer NULL pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

none

E_CWORD33_Status C_CWORD33_HSM::_CWORD33_Start (CEventDataPtr *f_pEventData* = boost::make_shared< CEventData >(0))

Brief

Start the state machine.

Parameters:

f_pEventData	CEventDataPtr - Event data

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK succ
e_CWORD33_StatusNullPointer	set null pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

See also:

_CWORD33_PostEvent(UI_32), CEventData, _CWORD33_QueueEvent, ProcessEvent

E_CWORD33_Status C_CWORD33_HSM::RemoveEventFromPostedEventQueue (const UI_32 *f_uiEventId*)

Brief

Remove the all events of eventId f_uiEventId from event queue of statemachine.

Parameters:

f_pEventData	const UI_32 - event id

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK succ e_CWORD33_StatusInvldID Not found event id e_CWORD33_StatusNullPointer NULL pointer

Prerequisite

Self instance of C_CWORD33_HSM created.

Change of internal state

none

Classification

public

Type

none

Implements C_CWORD33_HSM.

Implemented in C_CWORD33_HSMChildFramework, and C_CWORD33_HSMParentFramework.

virtual E_CWORD33_Status C_CWORD33_HSMFramework::_CWORD33_FrameworkConnect (C_CWORD33_State * *f_pAppState*, BOOL *f_bIsDefaultState* = FALSE)[pure virtual]

Summary

pure virtual fuction

Parameters:

in	*f_pAppState*	C_CWORD33_State *f_pAppState - state object to be added in the ready state.
in	*f_bIsDefaultState*	BOOL f_bIsDefaultState - if the state is default state

Return values:

None	

Preconditions

None.

Change of the internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_FrameworkConnect This adds the given state as a sub state of sReady state of the Framework

Parameters:

in	*f_pAppState*	C_CWORD33_State* - state object to be added in the ready state.
in	*f_bIsDefaultState*	BOOL - defines if the state is default state

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implemented in C_CWORD33_HSMChildFramework, and C_CWORD33_HSMParentFramework.

virtual E_CWORD33_Status C_CWORD33_HSMFramework::_CWORD33_FrameworkConnect (CWORD33__HSM_STATES *f_e_CWORD33_State*, UI_32 *f_uiEventId*, C_CWORD33_Reaction * *f_pReaction*, std::string *f_strEventName* = "", BOOL *f_bIsDeferredEvent* = FALSE)[pure virtual]

Summary

pure virtual fuction

Parameters:

in	*f_e_CWORD33_State*	_CWORD33__HSM_STATES f_e_CWORD33_State - enum maping to framework state
in	*f_uiEventId*	UI_32 f_uiEventId - Event id
in	*f_pReaction*	C_CWORD33_Reaction *f_pReaction - Reaction object for attaching to event
in	*f_strEventName*	std::string f_strEventName - Event name
in	*f_bIsDeferredEvent*	BOOL f_bIsDeferredEvent - defines if the event is deferred event

Return values:

E_CWORD33_Status	depend on implement class

Preconditions

None.

Change of the internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_FrameworkConnect This connects the reaction to event and add event to states

Parameters:

in	*f_e_CWORD33_State*	_CWORD33__HSM_STATES - enum maping to framework state
in	*f_uiEventId*	UI_32 - Event id
in	*f_pReaction*	C_CWORD33_Reaction* - Reaction object for attaching to event
in	*f_strEventName*	std::string - Event name
in	*f_bIsDeferredEvent*	BOOL - defines if the event is deferred event

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implemented in C_CWORD33_HSMChildFramework, and C_CWORD33_HSMParentFramework.

The documentation for this class was generated from the following file:

Detailed Description

This class implements the additional functionality supported by HSM Orthogonal state. It provides the standard interfaces for adding orthogonal state machines.

Member Function Documentation

E_CWORD33_Status C_CWORD33_OrthogonalState::_CWORD33_AddOrthogonalRegion (C_CWORD33_CompositeState * *f_pOrthogonalRegion*)

_CWORD33_AddOrthogonalRegion This Interface adds orthogonal region in the orthogonal state.

Parameters:

in	*f_pOrthogonalRegion*	C_CWORD33_CompositeState - Orthogonal region object to be associated with state.

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

virtual C_CWORD33_State* C_CWORD33_OrthogonalState::_CWORD33_GetActiveState ()[virtual]

Summary

pure virtual fuction

Parameters:

None	

Return values:

*C_CWORD33_State**	depend on implement class

Preconditions

None.

Change of the internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_GetActiveState This interface returns the Active state of the current composite state. In case of non-composite state current state is active state

Returns:

Active state C_CWORD33_State* - Active state

Implements C_CWORD33_State.

virtual BOOL C_CWORD33_OrthogonalState::_CWORD33_HasOrthogoanlRegions ()[virtual]

Brief

This function indicates if the state has sub states.

Parameters:

None	

Return values:

BOOL	if the state has sub states

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

C_CWORD33_OrthogonalState

_CWORD33_HasOrthogoanlRegions This indicates if the state has sub states. It returns TRUE only in the OrthogonalState where this function is overridden

Returns:

TRUE/FASLE BOOL - returns TRUE if it has sub states otherwise returns false.

Reimplemented from C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_OrthogonalState::_CWORD33_OnEntry (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnEntry state initialization can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implements C_CWORD33_State.

virtual C_CWORD33_State* C_CWORD33_OrthogonalState::_CWORD33_OnEvent (CEventDataPtr *f_pEventData*)[virtual]

Brief

This function processes the event.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

*C_CWORD33_State**	Pointer to current C_CWORD33_State object after processing event

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_IsReactionAvailable

_CWORD33_OnEvent This function processes the event. If the reaction for event is available in the current state within eventlist and deferred eventlist then it is consumed in the current state otherwise forwarded to the parent state. Event forwarding is done recursively till either event is consumed or the root state has encountered. This also process the events posted in the reactions recursively till all posted events are cleared.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

state C_CWORD33_State* - Returns current state after the event is processed

Reimplemented from C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_OrthogonalState::_CWORD33_OnExit (CEventDataPtr *f_pEventData*)[protected], [virtual]

_CWORD33_OnExit state cleanup can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implements C_CWORD33_State.

C_CWORD33_State* C_CWORD33_OrthogonalState::_CWORD33_OnHSMStart (CEventDataPtr *f_pEventData*)[virtual]

Brief

Initialize state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

*C_CWORD33_State**	Pointer to current C_CWORD33_State object after processing event
NULL	error occurs in internal process

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_OnEntry, _CWORD33_OnHSMStop

_CWORD33_OnHSMStart This function is called recursively till the leaf state is reached. This internally calls the Entry function of the current state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

Reimplemented from C_CWORD33_State.

C_CWORD33_State* C_CWORD33_OrthogonalState::_CWORD33_OnHSMStop (CEventDataPtr *f_pEventData*)[virtual]

Brief

Clearup state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

*C_CWORD33_State**	Pointer to current C_CWORD33_State object after processing event
NULL	error occurs in internal process

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_OnExit, _CWORD33_OnHSMStart

_CWORD33_OnHSMStop This function is called recursively till the required parent state is reached. This internally calls the Exit function of the current state.

Parameters:

in	*f_pEventData*	CECEventDataPtr Event data

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

Reimplemented from C_CWORD33_State.

virtual E_CWORD33_Status C_CWORD33_OrthogonalState::_CWORD33_PrintStates ()[virtual]

Brief

This logs the state name and event name associated with the state

Parameters:

None	

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusNullPointer	null pointer exception

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_PrintStates This logs the state name and events associated with the state

Returns:

pointer to the vector that stores the eventinfo of the posted deferred event

C_CWORD33_HSM * m_pStateMachine

pointer to the application statemachine

Detailed Description

This class implements the basic functionality required for HSM state. It provides the standard interfaces for entering, exiting and reacting in a state.

Constructor & Destructor Documentation

C_CWORD33_State::C_CWORD33_State (std::string *f_pName*)

Brief

C_CWORD33_State constructor

Parameters:

in	*f_pName*	std::string - Name of the state

Return values:

None	

Prerequisite

None

Change of internal state

None

Classification

public

Type

sync only

See also:

~C_CWORD33_State Class destructor

Returns:

none

Member Function Documentation

E_CWORD33_Status C_CWORD33_State::_CWORD33_AddDeferredEvent (UI_32 *f_uiEventId*, std::string *f_strEventName* = "")

Brief

add deferred event information

Parameters:

in	*f_uiEventId*	UI_32 f_uiEventId - event ID
in	*f_strEventName*	std::string f_strEventName - event name

Return values:

e_CWORD33_StatusOK	add deferred event success
e_CWORD33_StatusNullPointer	exception occur when add deferred event

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_AddDeferredEvent Associates the deferred event id with the reaction in the state. When the event is posted to the state the event is deferred and stored in the state. In case of implicit recall of the deferred events, events are processed before exiting the state. The deferred events can also be recalled explicitly in the state This also adds the event name to the map which is used for debugging.

Parameters:

in	*f_uiEventId*	UI_32 - Event id of the event to be added in the state
in	*f_strEventName*	string - Name of the event (used for debugging purpose only)

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

E_CWORD33_Status C_CWORD33_State::_CWORD33_AddEvent (UI_32 *f_uiEventId*, C_CWORD33_Reaction * *f_pReaction*, std::string *f_strEventName* = "")

Brief

add event information

Parameters:

in	*f_uiEventId*	UI_32 f_uiEventId - event ID
in	*f_pReaction*	C_CWORD33_Reaction *f_pReaction - event reaction
in	*f_strEventName*	std::string f_strEventName - event name

Return values:

e_CWORD33_StatusOK	add event success
e_CWORD33_StatusNullPointer	exception occur when add event

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_AddEvent Associates the event id with the reaction in the state. When the event is posted to the state the associated reaction is executed. This also adds the event name to the map which is used for debugging.

Parameters:

in	*f_uiEventId*	UI_32 - Event id of the event to be added in the state
in	*f_pReaction*	C_CWORD33_Reaction* - Reaction to be associated with the with event id in the state
in	*f_strEventName*	string - Name of the event (used for debugging purpose only)

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

virtual C_CWORD33_State* C_CWORD33_State::_CWORD33_GetActiveState ()[pure virtual]

Summary

pure virtual fuction

Parameters:

None	

Return values:

*C_CWORD33_State**	depend on implement class

Preconditions

None.

Change of the internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_GetActiveState This interface returns the Active state of the current composite state. In case of non-composite state current state is active state

Returns:

Active state C_CWORD33_State* - Active state

Implemented in C_CWORD33_CompositeState, C_CWORD33_OrthogonalState, C_CWORD33_HistoryState, and C_CWORD33_LeafState.

virtual HANDLE C_CWORD33_State::_CWORD33_GetAppHandle ()[virtual]

Brief

Get application handle.

Parameters:

None	

Return values:

HANDLE	

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

C_CWORD33_HSM::_CWORD33_GetAppHandle

_CWORD33_GetAppHandle This interface returns the application handle

Returns:

HANDLE HANDLE - Application Handle

virtual BOOL C_CWORD33_State::_CWORD33_HasOrthogoanlRegions ()[virtual]

Brief

This function indicates if the state has sub states.

Parameters:

None	

Return values:

BOOL	if the state has sub states

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

C_CWORD33_OrthogonalState

_CWORD33_HasOrthogoanlRegions This indicates if the state has sub states. It returns TRUE only in the OrthogonalState where this function is overridden

Returns:

TRUE/FASLE BOOL - returns TRUE if it has sub states otherwise returns false.

Reimplemented in C_CWORD33_OrthogonalState.

virtual BOOL C_CWORD33_State::_CWORD33_HasSubStates ()[virtual]

Brief

This function indicates if the state has sub states.

Parameters:

None	

Return values:

BOOL	if the state has sub states

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

C_CWORD33_CompositeState:: _CWORD33_HasSubStates

_CWORD33_HasSubStates This indicates if the state has sub states. It returns TRUE only in the CompositeState where this function is overridden

Returns:

TRUE/FASLE BOOL - returns TRUE if it has sub states otherwise returns false.

Reimplemented in C_CWORD33_CompositeState.

virtual BOOL C_CWORD33_State::_CWORD33_IsReactionAvailable (UI_32 *f_uiEventId*)[virtual]

Brief

Check the availability of event.

Parameters:

in	*f_uiEventId*	UI_32 - event ID

Return values:

TRUE	reaction is available for this event
FALSE	reaction is not available for this event

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_PostEvent

_CWORD33_IsReactionAvailable

Parameters:

in	*f_uiEventId*	UI_32 - Event identifier

Returns:

TRUE/FASLE BOOL - returns TRUE if it reaction is available for this event

virtual E_CWORD33_Status C_CWORD33_State::_CWORD33_OnEntry (CEventDataPtr *f_pEventData*)[protected], [pure virtual]

_CWORD33_OnEntry This is pure virtual function implemented by the derived classes of the application. state initialization can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implemented in C_CWORD33_CompositeState, C_CWORD33_OrthogonalState, C_CWORD33_HistoryState, and C_CWORD33_LeafState.

virtual C_CWORD33_State* C_CWORD33_State::_CWORD33_OnEvent (CEventDataPtr *f_pEventData*)[virtual]

Brief

This function processes the event.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

*C_CWORD33_State**	Pointer to current C_CWORD33_State object after processing event

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_IsReactionAvailable

_CWORD33_OnEvent This function processes the event. If the reaction for event is available in the current state within eventlist and deferred eventlist then it is consumed in the current state otherwise forwarded to the parent state. Event forwarding is done recursively till either event is consumed or the root state has encountered. This also process the events posted in the reactions recursively till all posted events are cleared.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

state C_CWORD33_State* - Returns current state after the event is processed

Reimplemented in C_CWORD33_OrthogonalState.

virtual E_CWORD33_Status C_CWORD33_State::_CWORD33_OnExit (CEventDataPtr *f_pEventData*)[protected], [pure virtual]

_CWORD33_OnExit This is pure virtual function implemented by the derived classes of the application. state cleanup can be performed in this function.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implemented in C_CWORD33_CompositeState, C_CWORD33_OrthogonalState, C_CWORD33_HistoryState, and C_CWORD33_LeafState.

virtual C_CWORD33_State* C_CWORD33_State::_CWORD33_OnHSMStart (CEventDataPtr *f_pEventData*)[virtual]

Brief

Initialize state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

*C_CWORD33_State**	Pointer to current C_CWORD33_State object after processing event
NULL	error occurs in internal process

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_OnEntry, _CWORD33_OnHSMStop

_CWORD33_OnHSMStart This function is called recursively till the leaf state is reached. This internally calls the Entry function of the current state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

Reimplemented in C_CWORD33_HistoryState, and C_CWORD33_OrthogonalState.

virtual C_CWORD33_State* C_CWORD33_State::_CWORD33_OnHSMStop (CEventDataPtr *f_pEventData*)[virtual]

Brief

Clearup state.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

*C_CWORD33_State**	Pointer to current C_CWORD33_State object after processing event
NULL	error occurs in internal process

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_OnExit, _CWORD33_OnHSMStart

_CWORD33_OnHSMStop This function is called recursively till the required parent state is reached. This internally calls the Exit function of the current state.

Parameters:

in	*f_pEventData*	CECEventDataPtr Event data

Returns:

CurrentState C_CWORD33_State* - Returns current state after operation

Reimplemented in C_CWORD33_HistoryState, and C_CWORD33_OrthogonalState.

E_CWORD33_Status C_CWORD33_State::_CWORD33_PostEvent (UI_32 *f_uiEventId*)

Brief

This function creates new eventdata object and add it to event queue of the state machine.

Parameters:

in	*f_uiEventId*	UI_32 f_uiEventId - event ID

Return values:

e_CWORD33_StatusOK	post event success
e_CWORD33_StatusNullPointer	exception occur when post event

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_PostEvent(CEventDataPtr), CEventData, C_CWORD33_HSM::_CWORD33_QueueEvent, C_CWORD33_HSM::ProcessEvent

_CWORD33_PostEvent This function creates new eventdata object and add the to event queue of the state. The events are posted in the reaction which are executed in the state. The event queue is processed once the execution of the reaction is completed.

Parameters:

in	*f_uiEventId*	UI_32 - Event Id

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

E_CWORD33_Status C_CWORD33_State::_CWORD33_PostEvent (CEventDataPtr *f_pEventData*)

Brief

This function adds event data to event queue of the state machine.

Parameters:

in	*f_pEventData*	CEventDataPtr - Pointer to event data class

Return values:

e_CWORD33_StatusOK	post event success
e_CWORD33_StatusNullPointer	exception occur when post event

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Change of internal state

None

Classification

Public

Type

sync only

See also:

CEventData, _CWORD33_IsReactionAvailable,
C_CWORD33_HSM::_CWORD33_QueueEvent, C_CWORD33_HSM::ProcessEvent

_CWORD33_PostEvent This function adds the event queue of the state. The events are posted in the reaction which are executed in the state. The event queue is processed once the execution of the reaction is completed.

Parameters:

in	*f_pEventData*	CEventDataPtr - Event data

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

virtual E_CWORD33_Status C_CWORD33_State::_CWORD33_PrintStates ()[virtual]

Brief

This logs the state name and event name associated with the state

Parameters:

None	

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusNullPointer	null pointer exception

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_PrintStates This logs the state name and events associated with the state

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Reimplemented in C_CWORD33_OrthogonalState, and C_CWORD33_CompositeState.

virtual E_CWORD33_Status C_CWORD33_State::_CWORD33_PrintXML (std::ostringstream & *f_strXMLString*)[virtual]

Brief

Update the State information in the given stream in the form of XML tags

Parameters:

out	*f_strXMLString*	std::ostringstream & - reference to the XML stream

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusNullPointer	NULL pointer exception

Prerequisite

Calls constructor to successfully create object.
State machine of current state in the applicaton is setted in _CWORD33_SetHSM.

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Reimplemented in C_CWORD33_CompositeState, and C_CWORD33_OrthogonalState.

E_CWORD33_Status C_CWORD33_State::_CWORD33_RemoveEventFromDeferredEventList (UI_32 *f_uiEventId*)

Brief

delete event from deferred event list

Parameters:

in	*f_uiEventId*	UI_32 f_uiEventId - event ID

Return values:

e_CWORD33_StatusOK	delete deferred event success
e_CWORD33_StatusInvldID	invalid event ID
e_CWORD33_StatusNullPointer	exception occur when delete deferred event

Prerequisite

None

Change of internal state

None

Classification

Public

Type

sync only

See also:

_CWORD33_RemoveEventFromDeferredEventList This function removes the event from the posted deferred queue list of the state.

Parameters:

in	*f_uiEventId*	UI_32 - Event id

Returns:

E_CWORD33_Status E_CWORD33_Status - e_CWORD33_StatusOK if event removed
e_CWORD33_StatusInvldID if event not found in list

virtual E_CWORD33_Status C_CWORD33_State::_CWORD33_SetHSM (C_CWORD33_HSM * *f_pStatemachine*)[virtual]

Brief

This Interface associates the gives statemachine with the current state

Parameters:

in	*f_pStatemachine*	C_CWORD33_HSM* - Statemachine associated with the state.

Return values:

e_CWORD33_StatusOK	success
e_CWORD33_StatusNullPointer	NULL pointer exception

Prerequisite

Calls constructor to successfully create object.

Change of internal state

None

Classification

Public

Type

sync only

See also:

C_CWORD33_HSM

_CWORD33_SetHSM This Interface associates the gives statemachine with the current state

Parameters:

in	*f_pStatemachine*	C_CWORD33_HSM* - Statemachine associated with the state.

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Reimplemented in C_CWORD33_CompositeState, and C_CWORD33_OrthogonalState.

virtual E_CWORD33_Status C_CWORD33_State::UpdateHistory ()[pure virtual]

Summary

pure virtual fuction

Parameters:

None	

Return values:

None	

Preconditions

None.

Change of the internal state

None

Classification

Public

Type

sync only

See also:

UpdateHistory This function stores the last active state

Returns:

E_CWORD33_Status E_CWORD33_Status - Returns status of operation

Implemented in C_CWORD33_OrthogonalState, C_CWORD33_CompositeState, C_CWORD33_HistoryState, C_CWORD33_ShallowHistoryState, C_CWORD33_DeepHistoryState, and C_CWORD33_LeafState.

Static Public Member Functions

static C_CWORD33_SyncData * _CWORD33_GetSyncDataInstance ()
static E_CWORD33_Status _CWORD33_ReleaseSyncDataInstance ()

Detailed Description

this file has the C_CWORD33_SyncData class definitions

Brief Introduction

60 This class provids some functions to handle the synchronization data as per the notification.

Member Function Documentation

static C_CWORD33_SyncData* C_CWORD33_SyncData::_CWORD33_GetSyncDataInstance ()[static]

Brief

This function is used to get the singleton instance of class.

Parameters:

None	

Return values:

C_CWORD33_SyncData	- singleton instance of class

Preconditons

-None

Change of internal status

None

Classification

Public

See also:

C_CWORD33_SyncData::C_CWORD33_SyncData

UI_32 C_CWORD33_SyncData::_CWORD33_GetSyncDataSize (const std::string & *f_cNotification*)

Brief

API to get the size of synchronization notification data.

Parameters:

in	*f_cNotification*	const std::string - Notification to be subscribed.

Return values:

UI_32	- size of notification data

Preconditons

-Instance is created successfully.

Change of internal status

-None

Classification

Public

See also:

None

E_CWORD33_Status C_CWORD33_SyncData::_CWORD33_GetSyncNotificationData (const std::string & *f_cNotification*, PVOID *f_pBuffer*, UI_16 *f_nBufferSize*)

Brief

This function is used to get the synchronization notification data for a particular notification.

Parameters:

in	*f_cNotification*	std::string - Notification for which data is required
in	*f_pBuffer*	PVOID - Buffer for the synchronization data
in	*f_nBufferSize*	UI_16 - size of notification data buffer

Return values:

e_CWORD33_StatusOK	- Success
e_CWORD33_StatusNullPointer	- Null pointor
e_CWORD33_StatusFail	- failure

Preconditons

none

Change of internal status

none

Classification

Public

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

None

static E_CWORD33_Status C_CWORD33_SyncData::_CWORD33_ReleaseSyncDataInstance ()[static]

Brief

This function is used to release the instance of class.

Parameters:

None	

Return values:

e_CWORD33_StatusOK	- success
except	e_CWORD33_StatusOK - failure

Preconditons

-None

Change of internal status

None

Classification

Public

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

C_CWORD33_SyncData::C_CWORD33_SyncData

E_CWORD33_Status C_CWORD33_SyncData::_CWORD33_StartNotificationSync (HANDLE *hApp*)

Brief

This method is used by the application to start the notification synchronization thread.

Parameters:

in	*hApp*	HANDLE - Application Handle.

Return values:

e_CWORD33_StatusOK	- On Success
e_CWORD33_StatusThreadAlreadyRunning	- If thread already running
e_CWORD33_StatusNullPointer	- Null Handle
e_CWORD33_StatusInvldHandle	- Invalid Handle

Preconditons

The function _CWORD33_ReleaseSyncDataInstance is successed, object is created successfully.

Change of internal status

-m_hSyncThreadMsgQHandle saves sync thread handle.

Classification

Public

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

None

E_CWORD33_Status C_CWORD33_SyncData::_CWORD33_StopNotificationSync (HANDLE *hApp*)

Brief

This method is used to stop the synchronization notification thread.

Parameters:

in	*hApp*	HANDLE - Application Handle.

Return values:

e_CWORD33_StatusOK	- On Success
e_CWORD33_StatusThreadNotExist	- If thread already running
e_CWORD33_StatusNullPointer	- Null Handle
e_CWORD33_StatusInvldHandle	- Invalid Handle

Preconditons

-The function _CWORD33_StartNotificationSync is successed.

Change of internal status

m_hSyncThreadMsgQHandle will be delete.

Classification

Public

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

None

E_CWORD33_Status

C_CWORD33_SyncData::_CWORD33_SubscribeNotificationWithDataSync (const std::string & *f_cNotification*)

Brief

API to subscribe to a synchronization notification data.

Parameters:

in	*f_cNotification*	std::string - Notification to be subscribed.

Return values:

e_CWORD33_StatusOK	- On Success
e_CWORD33_StatusFail	- On failure

Preconditons

none

Change of internal status

none

Classification

Public

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
e_CWORD33_StatusFail:Failure

See also:

None

E_CWORD33_Status

C_CWORD33_SyncData::_CWORD33_UnSubscribeNotificationWithDataSync (const std::string & *f_cNotification*)

Brief

API to unsubscribe to a synchronization notification data.

Parameters:

in	*f_cNotification*	std::string - Notification to be subscribed.

Return values:

e_CWORD33_StatusOK	- On Success
e_CWORD33_StatusFail	- On failure

Preconditons

the _CWORD33_SubscribeNotificationWithDataSync result is success.

Change of internal status

The synchronization data's pointor of the special notification will be remove and delete.
The synchronization data of the special notification will delete from m_mSyncDataMap.

Classification

Public

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
e_CWORD33_StatusFail:Failure

Member Function Documentation

static E_CWORD33_Status _CWORD33_::framework::C_CWORD33_ThreadPriorities::AddPriority (const std::string & *f_cThreadName*, SI_32 *f_si32Priority*)[static]

Summary

set thread Priority

Parameters:

in	*f_cThreadName*	const std::string &f_cThreadName - thread name
in	*f_si32Priority*	SI_32 f_si32Priority - Priority

Return values:

e_CWORD33_StatusOK	set Priority success

Preconditions

None

Change of the internal state

ms_mapThreadPritories[f_cThreadName] = f_si32Priority

Classification

public

Type

sync only

See also:

static SI_32 _CWORD33_::framework::C_CWORD33_ThreadPriorities::GetPriority (const std::string & *f_cThreadName*)[static]

Brief

Get the priority of the thread. Priority of the thread was added by AddPriority(), when parsing command line arguments.

Parameters:

in	*f_cThreadName*	const std::string& - Name of thread

Return values:

SI_32	Returns the priority of a thread.
_CWORD33__PRIORITY_NOT_FOUND	if specified thread name not found

_CWORD33__PRIORITY_NOT_FOUND
#define _CWORD33__PRIORITY_NOT_FOUND -1 // if specified thread name not found

Prerequisite

Call AddPriority() and set priority.

Change of internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

AddPriority

static E_CWORD33_Status _CWORD33_::framework::C_CWORD33_ThreadPriorities::ParseThreadArguments (PCHAR *f_cArgumentValue*)[static]

Summary

analyse thread param

Parameters:

in	*f_cArgumentValue*	PCHAR f_cArgumentValue - thread param string

Return values:

e_CWORD33_StatusOK	parse thread param success
e_CWORD33_StatusFail	parse thread param failed

Preconditions

BOOL operator== (C_CWORD33_Version &a, C_CWORD33_Version &b)

Detailed Description

Version Info Class.

Brief Introduction

This class provides functions to get various information of the version.

Constructor & Destructor Documentation

C_CWORD33_Version::C_CWORD33_Version ()

Brief

Construct a C_CWORD33_Version object.

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

~C_CWORD33_Version

C_CWORD33_Version::C_CWORD33_Version (UI_16 *major*, UI_16 *minor*, UI_16 *revision*)

Brief

Constructs a C_CWORD33_Version object with parameters.

Parameters:

in	*major*	UI_16 - Major number of the application
in	*minor*	UI_16 - Minor number of the application
in	*revision*	UI_16 - Revision number of the application

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

~C_CWORD33_Version

virtual C_CWORD33_Version::~C_CWORD33_Version ()[virtual]

GetRespDataFrom_CWORD77_DataPool API to get data associated with response from *CWORD77* Data Pool Depricated. Do not use.

Parameters:

in	*f_uiMsgId*	UI_32 - MsgId
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	PVOID - void pointer to data

Returns:

E_CWORD33_Status - Succes or Error

VOID C_CWORD77_Data::SetRequData (const _CWORD77_DataPoolKey & *f_DataPoolKey*, UI_32 *f_uiSize*, PVOID *f_pData*)

SetReqDataIn_CWORD77_DataPool API to set data associated with request into *CWORD77* Data Pool

Parameters:

in	*f_DataPoolKey*	_CWORD77_DataPoolKey - Data pool key
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	PVOID - void pointer to data

Returns:

VOID - None

VOID C_CWORD77_Data::SetRequData (UI_32 *f_uiMsgId*, UI_32 *f_uiSize*, PVOID *f_pData*)

SetReqDataIn_CWORD77_DataPool API to set data associated with request into *CWORD77* Data Pool Depricated. Do not use.

Parameters:

in	*f_uiMsgId*	UI_32 - MsgId
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	PVOID - void pointer to data

Returns:

VOID - None

VOID C_CWORD77_Data::SetRespoData (const _CWORD77_DataPoolKey & *f_DataPoolKey*, UI_32 *f_uiSize*, const PVOID *f_pData*)

SetRespDataIn_CWORD77_DataPool API to set data associated with response into *CWORD77* Data Pool

Parameters:

in	*f_DataPoolKey*	_CWORD77_DataPoolKey - Data pool key
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	PVOID - void pointer to data

Returns:

VOID - None

VOID C_CWORD77_Data::SetRespoData (UI_32 *f_uiMsgId*, UI_32 *f_uiSize*, const PVOID *f_pData*)

SetRespDataIn_CWORD77_DataPool API to set data associated with response into *CWORD77* Data Pool Depricated. Do not use.

Parameters:

in	*f_uiMsgId*	UI_32 - MsgId
in	*f_uiSize*	UI_32 - size of the data
in	*f_pData*	PVOID - void pointer to data

Returns:

VOID - None

static C_CWORD77_DataPool * GetInstance ()
static void DeleteInstance ()

Detailed Description

class: C_CWORD77_DataPool Description: This is interface class to *CWORD77* Data base. It provides APIs to set and get data from *CWORD77* Data base

---

Constructor & Destructor Documentation

C_CWORD77_DataPool::C_CWORD77_DataPool ()

C_CWORD77_DataPool Constructor for C_CWORD77_DataPool

Parameters:

None	

Returns:

None

C_CWORD77_DataPool::~C_CWORD77_DataPool ()

~C_CWORD77_DataPool Destructor for C_CWORD77_DataPool

Parameters:

None	

Returns:

None

Member Function Documentation

static void C_CWORD77_DataPool::DeleteInstance ()[static]

DeleteInstance API to delete single instance of C_CWORD77_DataPool

Parameters:

None	

Returns:

None

static C_CWORD77_DataPool* C_CWORD77_DataPool::GetInstance ()[static]

GetInstance API to get single instance of C_CWORD77_DataPool

Parameters:

None	

Returns:

Pointer to single instance of C_CWORD77_Controller

template<class T > void C_CWORD77_DataPool::GetReqArrayData (UI_32 *VarName*, T * *Array*, UI_32 & *ArraySize*)[inline]

GetRequestArrayData Templatized Function to get array data from Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key

out	*Array*	T * - Pointer to an array of given type
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

void C_CWORD77_DataPool::GetReqArrayStringData (UI_32 *VarName*, std::string *DataValue*[], UI_32 & *size*)[inline]

GetRequestArrayStringData API to get array of string data from Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*DataValue*	string [] - array of strings
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > T C_CWORD77_DataPool::GetReqData (UI_32 *VarName*)[inline]

GetRequestData Templatized Function to get data from Resquest *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

T - value belong to type T

UI_32 C_CWORD77_DataPool::GetReqDataSize (UI_32 *Key*)[inline]

GetNoofElementsFromRequestTable API to get No of elements in a key from request data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

UI_32 - No of elements

EDataType C_CWORD77_DataPool::GetReqDataType (UI_32 *Key*)[inline]

GetDataTypeFromRequestTable API to get data type of key from request data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

EDataType - Data type of key

std::string C_CWORD77_DataPool::GetReqStringData (UI_32 *VarName*)[inline]

GetRequestStringData API to get string data from Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

string - value of data

template<class T > void C_CWORD77_DataPool::GetRespArrayData (UI_32 *VarName*, T * *Array*, UI_32 & *ArraySize*)[inline]

GetRequestArrayData Templatized Function to get array data from Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*Array*	T * - Pointer to an array of given type
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

void C_CWORD77_DataPool::GetRespArrayStringData (UI_32 *VarName*, std::string *DataValue*[], UI_32 & *size*)[inline]

GetResponseArrayStringData API to get array of string data from Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
out	*DataValue*	string [] - array of strings
out	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > T C_CWORD77_DataPool::GetRespData (UI_32 *VarName*)[inline]

GetResponseData Templatized Function to get data from Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

T - value belong to type T

UI_32 C_CWORD77_DataPool::GetRespDataSize (UI_32 *Key*)[inline]

GetNoofElementsFromResponseTable API to get No of elements in a key from response data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

UI_32 - No of elements

EDataType C_CWORD77_DataPool::GetRespDataType (UI_32 *Key*)[inline]

GetDataTypeFromResponseTable API to get data type of key from response data base

Parameters:

in	*VarName*	UI_32 - key

Returns:

EDataType - Data type of key

template<class T > void C_CWORD77_DataPool::SetReqArrayData (UI_32 *VarName*, EDataType *DataType*, T * *Array*, UI_32 *ArraySize*)[inline]

SetRequestArrayData Templatized Function to set array data into Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T * - Pointer to an array of given type
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

void C_CWORD77_DataPool::SetReqArrayStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*[], UI_32 *size*)[inline]

SetRequestArrayStringData API to set array of string data into Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > void C_CWORD77_DataPool::SetReqData (UI_32 *VarName*, EDataType *DataType*, T *Array*)[inline]

SetRequestData Templatized Function to set data into Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T - Data type of key

Returns:

None

void C_CWORD77_DataPool::SetReqStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*)[inline]

SetRequestStringData API to set string data into Request *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings

Returns:

None

template<class T > void C_CWORD77_DataPool::SetRespArrayData (UI_32 *VarName*, EDataType *DataType*, T * *Array*, UI_32 *ArraySize*)[inline]

SetRequestArrayData Templatized Function to set array data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T * - Pointer to an array of given type
in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

void C_CWORD77_DataPool::SetRespArrayStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*[], UI_32 *size*)[inline]

SetRequestArrayStringData API to set array of string data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings

in	*ArraySize*	UI_32 - No of elements of Array

Returns:

None

template<class T > void C_CWORD77_DataPool::SetRespData (UI_32 *VarName*, EDataType *DataType*, T *Array*)[inline]

SetRequestData Templatized Function to set data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*Array*	T - Data type of key

Returns:

None

void C_CWORD77_DataPool::SetRespStringData (UI_32 *VarName*, EDataType *VarType*, std::string *DataValue*)[inline]

SetResponseStringData API to set string data into Response *CWORD77* Data base

Parameters:

in	*VarName*	UI_32 - key
in	*DataType*	EDataType - Data Type of key
in	*DataValue*	string [] - array of strings

Returns:

None

CMutex Class Reference

Mutex Lock Class.

#include <ns_utility_sys.hpp>

Public Member Functions

CMutex ()
~CMutex ()
void ReadLock ()
void WriteLock ()
void Unlock ()

Detailed Description

Mutex Lock Class.

Brief Introduction

This class defines locking policy for Mutexes.

Constructor & Destructor Documentation

CMutex::CMutex ()

Brief

Construct a CMutex object.

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CMutex::~CMutex ()

Brief

Destruct the CMutex object.

Prerequisite

Construct a CMutex object

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CMutex()

Member Function Documentation

void CMutex::ReadLock ()

Brief

Lock the CMutex object when reading.

Return values:

void	

Prerequisite

Construct a CMutex object

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CMutex(), WriteLock(), UnLock()

void CMutex::Unlock ()

Brief

Open the lock of the CMutex object.

Return values:

void	

Prerequisite

Construct a CMutex object

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CMutex(), ReadLock(), WriteLock()

void CMutex::WriteLock ()

Brief

Lock the CMutex object when writing.

Return values:

void	

Prerequisite

Construct a CMutex object

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CMutex(), ReadLock(), UnLock()

The documentation for this class was generated from the following file:

78 ns_utility_sys.hpp

CNSConfigParser Class Reference

File both Reade and Write Service Class.

#include <ns_config_parser_if.h>
Inheritance diagram for CNSConfigParser:

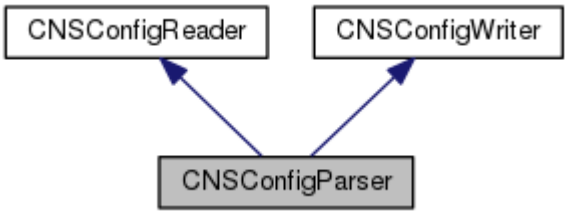
Collaboration diagram for CNSConfigParser:



IMAGE

Public Member Functions

CNSConfigParser ()
CNSConfigParser (const std::string &f_c_filepath)
~CNSConfigParser ()
E_CWORD33_Status Parse (const std::string &f_c_filepath)

Additional Inherited Members

Detailed Description

File both Reade and Write Service Class.

Brief Introduction

This class provides API's to application for both reading and writing into configuration files.

Constructor & Destructor Documentation

CNSConfigParser::CNSConfigParser ()

Brief

Constructor of CNSConfigParser class

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigParser::~CNSConfigParser

CNSConfigParser::CNSConfigParser (const std::string & *f_c_filepath*)[explicit]

Brief

Constructor of CNSConfigParser class This is depricated. Use parameterless constructor instead to create object and Parse(filepath) to parse the file using parser object.

Parameters:

in	*f_c_filepath*	const std::string& - Full path of the configuration file

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigParser::~CNSConfigParser

CNSConfigParser::~CNSConfigParser ()

~

Brief

Destructor of CNSConfigParser class

Return values:

none	

Prerequisite

Call the construct of CNSConfigParser

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigParser::CNSConfigParser

Member Function Documentation

E_CWORD33_Status CNSConfigParser::Parse (const std::string & *f_c_filepath*)

Brief

This function is used to create config reader object and config writer object which then parses the configuration file.

Parameters:

in	*f_c_filepath*	const std::string& - Name of the configuration file

Return values:

e_CWORD33_StatusOK	on success
e_CWORD33_StatusNullPointer	- if memory allocation failed or document not proper
e_CWORD33_StatusFail	- invalid file type
e_CWORD33_StatusInvldParam	invalid parameter
e_CWORD33_StatusErrOther	file data error

Prerequisite

Call the construct of CNSConfigParser

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigReader::Parse, CNSConfigWriter::Parse

E_CWORD33_Status GetInt (const std::string &f_c_key, SI_32 &f_si_value)
E_CWORD33_Status GetString (const std::string &f_c_key, std::string &f_c_value)

Protected Member Functions

PVOID GetDataPtr ()

Detailed Description

Configuration File Read Service Class.

Brief Introduction

This class provides API's to application to read from configuration files.

Constructor & Destructor Documentation

CNSConfigReader::CNSConfigReader ()

Brief

Constructor of CNSConfigReader class This constructor can only be called by derived class. Application cannot use this constructor to create object of CNSConfigReader class.

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigReader::~CNSConfigReader

CNSConfigReader::CNSConfigReader (const std::string & *f_c_filepath*)[explicit]

Brief

Constructor of CNSConfigReader class This is depricated. Use parameterless constructor instead to create object and Parse(filepath) to parse the file using reader object.

Parameters:

in	*f_c_filepath*	const std::string& - Name of the configuration file

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigReader::~CNSConfigReader

CNSConfigReader::~CNSConfigReader ()

~

Brief

Destructor of CNSConfigReader class. It is used when release the instance.

Return values:

none	

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigReader::CNSConfigReader

Member Function Documentation

BOOL CNSConfigReader::GetBool (const std::string & *f_c_key*)

Brief

This function is used to get the bool value associated with key. If there are multiple values associated with the same key, then the first value is returned. This API has been depricated, use GetBool(key, ref_value)

Parameters:

in	*f_c_key*	const std::string& - key to search

Return values:

TRUE	- value associated with key
FALSE	- Failed to get value associated with key

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::SetBool

E_CWORD33_Status CNSConfigReader::GetBool (const std::string & *f_c_key*, BOOL & *f_b_value*)

Brief

This function is used to get the bool value associated with key If there are multiple values associated with the same key, then the first value is returned.

Parameters:

in	*f_c_key*	const std::string& - key string
in	*f_b_value*	BOOL& - value associated with key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key
e_CWORD33_StatusErrOther	- value is not bool type

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::SetBool

PVOID CNSConfigReader::GetDataPtr ()[protected]

GetDataPtr This function is used to get the data pointer. This pointer is then set in config writer. This is needed to avoid recreation of same data structure object in both reader and writer when we create object of NSConfigParser.

Returns:

PVOID - pointer of data structure

F_64 CNSConfigReader::GetDouble (const std::string & *f_c_key*)

Brief

This function is used to get the double value associated with key. If there are multiple values associated with the same key, then the first value is returned. This API has been depricated, use GetDouble(key, ref_value)

Parameters:

in	*f_c_key*	const std::string& - key to search
out	-	none

Return values:

F_64	- value associated with key
0	- Failed to get value associated with key(64bit)

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Please pay attention to the following points when you use this API.

We can take the value in specification only if it is in the range of [1.1754943508222875079e-38F, 3.4028234663852885981e+38F](min value of double, max value of double).

Type

Sync Only

See also:

CNSConfigWriter::Set

E_CWORD33_Status CNSConfigReader::GetDouble (const std::string & *f_c_key*, F_64 & *f_f_value*)

Brief

This function is used to get the double value associated with key. If there are multiple values associated with the same key, then the first value is returned.

Parameters:

in	*f_c_key*	const std::string& - key to search
in	*f_f_value*	F_64& - value associated with key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key
e_CWORD33_StatusInvldBuf	- change error

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Please pay attention to the following points when you use this API.

Return e_CWORD33_StatusOK if we didn't excute the changing operation
We can take the value in specification only if it is in the range of [1.17549435082228750797e-38F, 3.40282346638528859812e+38F](min value of double, max value of double).

Type

Sync Only

See also:

CNSConfigWriter::Set

F_32 CNSConfigReader::GetFloat (const std::string & *f_c_key*)

Brief

This function is used to get the float value associated with key If there are multiple values associated with the same key, then the first value is returned. This API has been depricated, use GetFloat(key, ref_value)

Parameters:

in	*f_c_key*	const std::string& - key to search

Return values:

F_32	value associated with key
0	- Failed to get value associated with key(32bit)

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::Set

E_CWORD33_Status CNSConfigReader::GetFloat (const std::string & *f_c_key*, F_32 & *f_f_value*)

Brief

This function is used to get the float value associated with key If there are multiple values associated with the same key, then the first value is returned.

Parameters:

in	*f_c_key*	const std::string& - key to search
in	*f_f_value*	F_32& - value associated with key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key
e_CWORD33_StatusInvldBuf	- change error

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::Set

SI_32 CNSConfigReader::GetInt (const std::string & *f_c_key*)

Brief

This function is used to get the integer value associated with key If there are multiple values associated with the same key, then the first value is returned. This API has been depricated, use GetInt(key, ref_value)

Parameters:

in	*f_c_key*	const std::string& - key to search

Return values:

SI_32	- value associated with key
0.0f	- Failed to get value associated with key(32bit)

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

Please pay attention to the following points when you use this API.

If data string getted from file is larger than INT_MAX(2147483648) return -1.

See also:

CNSConfigWriter::Set

E_CWORD33_Status CNSConfigReader::GetInt (const std::string & *f_c_key*, SI_32 & *f_si_value*)

Brief

This function is used to get the integer value associated with key If there are multiple values associated with the same key, then the first value is returned.

Parameters:

in	*f_c_key*	const std::string& - key to search

out	*f_si_value*	SI_32& - value associated with key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key
e_CWORD33_StatusInvldBuf	- change error

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::Set

std::string CNSConfigReader::GetString (const std::string & *f_c_key*)

Brief

This function is used to get the string value associated with key If there are multiple values associated with the same key, all the values separated by delimiter "\n" are returned. This API has been depricated, use GetString(key, ref_value)

Parameters:

in	*f_c_key*	const std::string& - key to search

Return values:

std::string	value(string) associated with key
nullbuffer	- Failed to get value associated with key

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::Set

E_CWORD33_Status CNSConfigReader::GetString (const std::string & *f_c_key*, std::string & *f_c_value*)

Brief

This function is used to get the string value associated with key If there are multiple values associated with the same key, all the values separated by delimiter "\n" are returned.

Parameters:

in	*f_c_key*	const std::string& - key to search
in	*f_c_value*	std::string& - value(string) associated with key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key

Prerequisite

Call the construct of CNSConfigReader

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::Set

E_CWORD33_Status CNSConfigReader::Parse (const std::string & *f_c_filepath*)

Brief

This function is used to parse configuration file

Parameters:

in	*f_c_filepath*	const std::string& - Name of the configuration file

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- if memory allocation failed or document is not proper
e_CWORD33_StatusFail	- invalid file type

e_CWORD33_StatusInvldParam	invalid parameter
e_CWORD33_StatusErrOther	- file data error

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

Detailed Description

File Write Service Class.

Brief Introduction

This class provides API's to application to write to configuration files.

Constructor & Destructor Documentation

CNSConfigWriter::CNSConfigWriter ()

Brief

Constructor of CNSConfigWriter class

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::~CNSConfigWriter

CNSConfigWriter::CNSConfigWriter (const std::string & *f_c_filepath*)[explicit]

Brief

Constructor of CNSConfigWriter class This is depricated. Use parameterless constructor instead to create object and Parse(filepath) to parse the file using writer object.

Parameters:

in	*f_c_filepath*	const std::string& - Full path of the configuration file

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::~CNSConfigWriter

CNSConfigWriter::~CNSConfigWriter ()

~

Brief

Destructor of CNSConfigWriter class

Return values:

none	

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::CNSConfigWriter

CNSConfigWriter::CNSConfigWriter (const std::string & *f_c_filepath*, BOOL *f_b_noload*)[protected]

CNSConfigWriter Constructor of CNSConfigWriter class

Parameters:

in	*f_c_filepath*	const std::string& - Full path of the configuration file
in	*f_b_noload*	BOOL - load writer with no data

Returns:

Member Function Documentation

E_CWORD33_Status CNSConfigWriter::Create (const std::string & *f_c_filepath*)[protected]

Create This function is used to create config object

Parameters:

in	*f_c_filepath*	const std::string& - Name of the configuration file

Returns:

E_CWORD33_Status - success or failure

E_CWORD33_Status CNSConfigWriter::Parse (const std::string & *f_c_filepath*)

Brief

This function is used to parse the configuration file

Parameters:

in	*f_c_filepath*	const std::string& - Name of the configuration file

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- if memory allocation failed or document not proper
e_CWORD33_StatusFail	- invalid file type
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusErrOther	- file data error

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigParser::Parse, CNSConfigWriter::Parse

E_CWORD33_Status CNSConfigWriter::Save ()

Brief

This function is used to save the configuration settings to config file

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusFail	- file access fail

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigWriter::SetBool, CNSConfigWriter::Set

E_CWORD33_Status CNSConfigWriter::Set (const std::string & *f_c_key*, F_64 *f_f_value*)

Brief

This function is used to set the double value corresponding to key. If multiple identical keys are found it sets the value for all the keys.

Parameters:

in	*f_c_key*	const std::string& - key
in	*f_f_value*	F_64 - double value to set for key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Please pay attention to the following points when you use this API.

We can take the value in specification only if it is in the range of [2.2250738585072013830 9e-308L, 1.7976931348623157e+308L](min value of double, max value of double).
Valid condition of search key string: there is no separator and line feed in config tag

Type

Sync Only

See also:

CNSConfigReader::GetDouble

E_CWORD33_Status CNSConfigWriter::Set (const std::string & *f_c_key*, F_32 *f_f_value*)

Brief

This function is used to set the float value corresponding to key. If multiple identical keys are found it sets the value for all the keys.

Parameters:

in	*f_c_key*	const std::string& - key
in	*f_f_value*	F_32 - float value to set for key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Please pay attention to the following points when you use this API.

We can take the value in specification only if it is in the range of [1.17549435082228750797e-38F, 3.40282346638528859812e+38F](min value of double, max value of double).
Valid condition of search key string: there is no separator and line feed in config tag

Type

Sync Only

See also:

CNSConfigReader::GetFloat

E_CWORD33_Status CNSConfigWriter::Set (const std::string & *f_c_key*, SI_32 *f_si_value*)

Brief

This function is used to set the integer value corresponding to key. If multiple identical keys are found it sets the value for all the keys.

Parameters:

in	*f_c_key*	const std::string& - key

in	*f_si_value*	SI_32 - integer value to set for key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Please pay attention to the following points when you use this API.

Valid condition of search key string: there is no separator and line feed in config tag

Type

Sync Only

See also:

CNSConfigReader::GetInt

E_CWORD33_Status CNSConfigWriter::Set (const std::string & *f_c_key*, const std::string & *f_s_value*)

Brief

This function is used to set the string value corresponding to key. If multiple identical keys are found it sets the value for all the keys.

Parameters:

in	*f_c_key*	const std::string& - key
in	*f_s_value*	const std::string& - string value to set for key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Please pay attention to the following points when you use this API.

Valid condition of search key string: there is no separator and line feed in config tag

Type

Sync Only

See also:

CNSConfigReader::GetString

E_CWORD33_Status CNSConfigWriter::SetBool (const std::string & *f_c_key*, BOOL *f_b_value*)

Brief

This function is used to set the bool value corresponding to key This function is not overloaded with other Set() API's of this class because BOOL is typedef of UI_32 so when we pass integer or BOOL to Set API it would have called the same API. If multiple identical keys are found it sets the value for all the keys.

Parameters:

in	*f_c_key*	const std::string& - key
in	*f_b_value*	BOOL - bool value to set for key

Return values:

e_CWORD33_StatusOK	- success
e_CWORD33_StatusNullPointer	- memory allocation failed
e_CWORD33_StatusInvldParam	- invalid parameter
e_CWORD33_StatusFail	- can not find key
e_CWORD78_StatusErrOther	- if passsed value is invalid

Prerequisite

Call the construct of CNSConfigWriter

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CNSConfigReader::GetBool

VOID CNSConfigWriter::SetDataPtr (PVOID *f_p_data*)[protected]

SetDataPtr This function is used to set the data pointer in writer class with data pointer created in config reader class. This is needed to avoid recreation of same data structure object in both reader and writer when we create object of NSConfigParser

Parameters:

in	*f_p_data*	PVOID - Pointer to data structure

Returns:

VOID

Detailed Description

CNSRcsPlugin.

Brief Introduction

Class to provide base class of CNSRcsPlugin

Constructor & Destructor Documentation

CNSRcsPlugin::CNSRcsPlugin (std::string *f_cPluginName*, TFPNSRcsSendPassthruData *f_fpNSRcsSendPassthruData*)[inline]

Summary

Constructor of CNSRcsPlugin class.

Parameters:

in	*f_cPluginName*	std::string - the name of plugin

in	*f_fpNSRcsSendPassthruData*	TFPNSRcsSendPassthruData - the pointer of send data function

Return values:

None	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

~CNSRcsPlugin

virtual CNSRcsPlugin::~CNSRcsPlugin ()[inline], [virtual]

Summary

Destructor of CNSRcsPlugin class.

Parameters:

None	

Return values:

None	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

Member Function Documentation

UI_8 CNSRcsPlugin::GetPluginId ()[inline]

Summary

get plugin id.

Parameters:

None	

Return values:

Plugin	Id UI_8 - the ID of plugin

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

std::string CNSRcsPlugin::GetPluginName ()[inline]

Summary

get plugin id.

Parameters:

None	

Return values:

m_cPluginName	std::string - the name of plugin

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

virtual UI_32 const* CNSRcsPlugin::GetResponseProtocolArray ()[pure virtual]

Summary

get response protocol array

Parameters:

none	

Return values:

UI_32	const *

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

virtual UI_32 const CNSRcsPlugin::GetResponseProtocolArrayLength ()[pure virtual]

Summary

get length of response protocol array

Parameters:

none	

Return values:

UI_32	const

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

virtual E_CWORD78_Status CNSRcsPlugin::ProcessRequestMessage (UI_32 *f_uiProtocol*, UI_8 *f_ui8ClientId*, CPassThruInDataHandler * *f_pData*)[pure virtual]

Summary

request from host side.

Parameters:

f_uiProtocol	UI_32 - protocol ID
f_ui8ClientId	UI_8 - client ID
f_pData	CPassThruInDataHandler - the handler of transfer data

Return values:

none	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

virtual E_CWORD33_Status CNSRcsPlugin::ProcessResponseMessage (PCSTR *f_cMsgSource*, UI_32 *f_uiProtocol*, UI_8 * *f_pui8Data*, UI_32 *f_uiDataLength*)[pure virtual]

Summary

response from service side on target

Parameters:

f_cMsgSource	PCSTR -
f_uiProtocol	UI_32 - protocol ID
f_pui8Data	UI_8 - pointer of data

f_uiDataLength	UI_32 - length of data

Return values:

E_CWORD33_Status	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

E_CWORD78_Status CNSRcsPlugin::SendPassthruOutData (UI_8 *f_ui8clientId*, PVOID *f_data*, UI_16 *f_ui16PayloadLength*)[inline]

Summary

the function of transport data

Parameters:

f_ui8ClientId	UI_8 - client id
f_data	PVOID - the pointer of transport data
f_ui16PayloadLength	UI_16 - the size of transport data

Return values:

E_CWORD33_Status	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRcsPlugin

static VOID CNSRcsPlugin::SetParentName (const std::string & *f_cParentName*)[inline], [static]

Summary

set parent name.

Parameters:

f_cParentName	std::string - the name of parent

Return values:

none	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

Detailed Description

CNSRingBuffer.

Brief Introduction

Class to provide class of ring buffer.

Constructor & Destructor Documentation

CNSRingBuffer::CNSRingBuffer (const std::string & *f_cMappedFilePath*, const UI_32 *f_uiSize*, int *f_lid* = -1)

Brief

Constructor for CNSRingBuffer

Parameters:

in	*f_cMappedFilePath*	const std::string& - path of the ring buffer mapped file
in	*f_uiSize*	const UI_32 - size of ring buffer
in	*f_lid*	int - Lock ID

Return values:

none	

Preconditons

Change of internal status

Classification

Public

Type

sync only

See also:

~CNSRingBuffer

CNSRingBuffer::~CNSRingBuffer ()

Brief

Destructor for CNSRingBuffer.

Parameters:

none	

Return values:

none	

Preconditons

Change of internal status

Classification

Public

Type

sync only

See also:

CNSRingBuffer

Member Function Documentation

E_CWORD33_Status CNSRingBuffer::ClearBuf ()

Brief

This function clears the ring buffer.

Parameters:

none	

Return values:

e_CWORD33_StatusOK	

e_CWORD33_StatusFail	

Preconditions

Open().

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

Open

E_CWORD33_Status CNSRingBuffer::Close ()

Brief

This function unmaps the ring buffer object.

Parameters:

none	

Return values:

e_CWORD33_StatusOK	
e_CWORD33_StatusFail	

Preconditons

Change of internal status

Classification

Public

Type

sync only

See also:

Open

E_CWORD33_Status CNSRingBuffer::DumpToFile (PCSTR *f_pPath*, PUI_32 *f_uiDumpSize*)

Brief

This function writes all the data in the buffer into provided file f_pPath.

Parameters:

in	*f_pPath*	PCSTR - file path.
in	*f_uiDumpSize*	PUI_32 - Returns The number of bytes written into file

Return values:

e_CWORD33_StatusOK	
e_CWORD33_StatusNullPointer	
e_CWORD33_StatusInvldParam	
e_CWORD33_StatusFail	
e_CWORD33_StatusFileLoadError	
e_CWORD33_StatusErrOther	

Preconditions

Open().

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

Open

SI_32 CNSRingBuffer::GetSize ()

Brief

This function returns the number of unread bytes which can be read by Read().

Return values:

SI_32	Returns The number of bytes which can be read by Read()
-1	error occurred

Preconditions

Open().

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

Open

BOOL CNSRingBuffer::IsOpen ()

Brief

This function is used to check whether the ring buffer is opened or not..

Parameters:

none	

Return values:

TRUE	- Open
FALSE	- Not open

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

CNSRingBuffer, Close

E_CWORD33_Status CNSRingBuffer::Open ()

Brief

This function opens and maps the ring buffer object.

Parameters:

none	

Return values:

e_CWORD33_StatusOK	
e_CWORD33_StatusInvldParam	
e_CWORD33_StatusFail	
e_CWORD33_StatusErrOther	

Preconditons

Change of internal status

Classification

Public

Type

sync only

See also:

CNSRingBuffer, Close

SI_32 CNSRingBuffer::Read (PSTR *buffer*, const UI_32 *f_uilength*)

Brief

This function reads data from the ring buffer.

Parameters:

[OUT]	buffer PSTR - pointer to the buffer in which the read data is stored
[IN]	f_uilength UI_32 - length of the data buffer provided

Return values:

SI_32	Returns The number of bytes actually read
-1	error occurred

Preconditions

Open().

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

Open

E_CWORD33_Status CNSRingBuffer::SetReadPtrToWritePtr ()

Brief

This function sets the position of read ptr to write ptr in buffer.

Parameters:

none	

Return values:

e_CWORD33_StatusOK	success

e_CWORD33_StatusFail	ring buffer is not open

Preconditions

Open().

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

Open

SI_32 CNSRingBuffer::Write (PCSTR *buffer*, const UI_32 *f_uilength*)

Brief

This function writes the data into the ring buffer.

Parameters:

[OUT]	buffer PSTR - pointer to the buffer containing the data to be written
[IN]	f_uilength UI_32 - length of the data buffer to be written

Return values:

SI_32	Returns The number of bytes written
-1	error occurred

Preconditions

Open().

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

Detailed Description

this file has the C_CWORD33_Guard class definitions

shared memory

Brief Introduction

This file has the C_CWORD33_Guard class definitions. This is an interface that defines the Evaluate interface for guard condition validation.

Brief Introduction

This class is used for handle shared memory.

Constructor & Destructor Documentation

CNSSharedMem::CNSSharedMem (const std::string & *f_cSharedMemName*, const UI_32 *f_uiSize*)

Brief

Constructor for CNSSharedMem

Parameters:

in	*f_cSharedMemName*	const std::string& - name of the shared memory
in	*f_uiSize*	const UI_32 - size of shared memory

Return values:

none

Member Function Documentation

E_CWORD33_Status CNSSharedMem::ClearBuf ()

Brief

Clear buffer.

Parameters:

None	

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK on success, e_CWORD33_StatusSemLockFail/

	e_CWORD33_StatusSemLockFail - mutex locking/unlocking error e_CWORD33_StatusFail - shared memory is not opened

Preconditons

Change of internal status

set m_pShmHdr->m_uiReadPtr with 0;
set m_pShmHdr->m_uiWritePtr with 0;
set m_pShmHdr->m_uiUnReadSize with 0;
set m_pShmHdr->m_bIsFull with FALSE;

e_CWORD33_Status:Result
e_CWORD33_StatusOK:Success
Except e_CWORD33_StatusOK:Failure

See also:

None

E_CWORD33_Status CNSSharedMem::Close ()

Brief

This function unmaps the shared memory object.

Return values:

e_CWORD33_StatusOK	if shared memory closed successfully
e_CWORD33_StatusFail	if shared memory is not opened

Preconditons

Open the shared memory object

Change of internal status

Close the shared memory object

Classification

public

Type

Open Close

See also:

Open

E_CWORD33_Status CNSSharedMem::DumpToFile (PCSTR *f_pPath*, PUI_32 *f_uiDumpSize*)

Brief

Dump data to file.

Parameters:

in	*f_pPath*	PCSTR - file path.
in	*[in]*	f_uiDumpSize PUI_32 - Returns The number of bytes written into file

Return values:

E_CWORD33_Status	e_CWORD33_StatusOK on success, e_CWORD33_StatusFileLoadError - file path is incorrect e_CWORD33_StatusSemLockFail/ e_CWORD33_StatusSemLockFail - mutex locking/unlocking error e_CWORD33_StatusFail - shared memory is not opened e_CWORD33_StatusInvldParam - invalid param

BOOL CNSSharedMem::IsOpen ()

Brief

This function is used to check whether the shared memory buffer is opened or not.

Return values:

TRUE	- Open
FALSE	- Not open

Preconditons

None

Change of internal status

None

Classification

public

Type

Open Close

See also:

none

E_CWORD33_Status CNSSharedMem::Open ()

Brief

This function opens and maps the shared memory object.

Return values:

e_CWORD33_StatusOK	if shared memory opened successfully
e_CWORD33_StatusFail	unable to open shared memory
e_CWORD33_StatusErrOther	if shared memory already opened

Preconditons

None

Change of internal status

Open shared memory object

Classification

Public

Type

Open Close

See also:

SI_32 CNSSharedMem::Read (PSTR *buffer*, const UI_32 *f_uilength*, const BOOL *f_bBlock* = TRUE)

Brief [out] buffer

PSTR - pointer to the buffer in which the read data is stored

Parameters:

in	*f_uilength*	UI_32 - length of the data buffer provided
in	*f_bBlock*	BOOL - TRUE - blocking call FALSE - non blocking call

Return values:

SI_32	Returns The number of bytes actually read, or NS_SHM_ERROR if an error occurred
NS_SHM_ERROR	

Preconditons

Open the shared memory object

Change of internal status

None

Classification

public

Type

Open Close

Detailed Description

read shared memory

Brief Introduction

This class is used for read shared memory.

Constructor & Destructor Documentation

CNSSharedMemReader::CNSSharedMemReader (const std::string & *f_cSharedMemName*, const BOOL *f_bBlock* = TRUE)

Brief

Constructor for CNSSharedMemReader

Parameters:

in	*f_cSharedMemName*	const std::string& - name of the shared memory
in	*f_bBlock*	BOOL - TRUE - blocking call for Read() API,Thread will get blocked the thread until data is available for read. FALSE - non blocking call for Read() API

CPassThruInDataHandler

Member Function Documentation

E_CWORD33_Status CPassThruInDataHandler::GetArrayCount (UI_16 & *f_ui16NoOfArrayElements*)[inline]

Brief

This function is used to get the buffer and its size.

Parameters:

out	*f_ui16NoOfArrayElements*	UI_16 - buffer size

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- If no array id found at the current location
e_CWORD33_StatusFail	- no sufficient buffer to read the data

Data Handler.

Brief Introduction

Class to get/set function to do output data handler

Constructor & Destructor Documentation

CPassThruOutDataHandler::CPassThruOutDataHandler (UI_8 *f_ui8ClientId*, UI_8 *f_ui8PluginId*, UI_32 *f_ui32CommandId*)[inline]

Summary

Constructor of CPassThruOutDataHandler class.

Parameters:

None	

Return values:

None	

Preconditions

None.

Change of the internal state

The internal state is not changed.

Classification

Public

Type

None

See also:

~CPassThruOutDataHandler

Here is the call graph for this function:

IMAGE 
CPassThruOutDataHandler::~CPassThruOutDataHandler ()[inline]

~

Summary

Destructor of CPassThruOutDataHandler class.

Parameters:

None	

Return values:

None	

Preconditions

None.

Change of the internal state

The internal state is not changed.

Classification

Public

Type

None

See also:

CPassThruOutDataHandler

Member Function Documentation

UI_8 CPassThruOutDataHandler::GetClientID ()[inline]

Brief

This function is used to get clinet id.

Parameters:

none	

Return values:

UI_8	- client id

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

UI_8* CPassThruOutDataHandler::GetData ()[inline]

Brief

This function is used to get m_vui8Data data address.

Parameters:

none	

Return values:

UI_8	* - m_vui8Data data address

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

UI_16 CPassThruOutDataHandler::GetLength ()[inline]

Brief

This function is used to get m_ui16CurOffset value.

Parameters:

none	

Return values:

UI_16	- m_ui16CurOffset value

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

E_CWORD33_Status CPassThruOutDataHandler::SetArrayCount (UI_16 *f_ui16ArrayCount*)[inline]

Brief

This function is used to set ArrayCount.

Parameters:

f_ui16ArrayCount	UI_16 - ArrayCount

Return values:

none	

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 

E_CWORD33_Status CPassThruOutDataHandler::SetBool (NSRCS_BOOL & *f_rcsboolValue*)[inline]

Brief

This function is used to set NSRCS_BOOL type value.

Parameters:

in	*f_rcsboolValue*	NSRCS_BOOL - new NSRCS_BOOL value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

E_CWORD33_Status CPassThruOutDataHandler::SetBuffer (UI_8 * *f_pui8Buffer*, UI_16 *f_ui16BufLength*)[inline]

Brief

This function is used to set buffer and size.

Parameters:

in	*f_pui8Buffer*	UI_8* - buffer address
in	*f_ui16BufLength*	UI_16 - buffer size

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- data member(m_ui8LastArrDataType) is invalid value

Prerequisite

None

Change of internal state

None

Classification

Public

Type

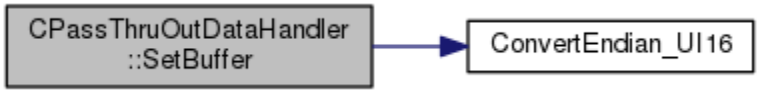
Sync Only

See also:

none

Here is the call graph for this function:

IMAGE



E_CWORD33_Status CPassThruOutDataHandler::SetSI16 (SI_16 *f_si16Value*)[inline]

Brief

This function is used to set SI_16 type value.

Parameters:

in	*f_si16Value*	SI_16 - new SI_16 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 
E_CWORD33_Status CPassThruOutDataHandler::SetSI32 (SI_32 *f_si32Value*)[inline]

Brief

This function is used to set SI_32 type value.

Parameters:

in	*f_si32Value*	SI_32 - new SI_32 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 
E_CWORD33_Status CPassThruOutDataHandler::SetSI64 (SI_64 *f_si64Value*)[inline]

Brief

This function is used to set SI_64 type value.

Parameters:

in	*f_si64Value*	SI_64 - new SI_64 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 
E_CWORD33_Status CPassThruOutDataHandler::SetSI8 (SI_8 *f_si8Value*)[inline]

Brief

This function is used to set SI_8 type value.

Parameters:

in	*f_si8Value*	SI_8 - new SI_8 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

E_CWORD33_Status CPassThruOutDataHandler::SetUI16 (UI_16 *f_ui16Value*)[inline]

Brief

This function is used to set UI_16 type value.

Parameters:

in	*f_ui16Value*	UI_16 - new UI_16 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 
E_CWORD33_Status CPassThruOutDataHandler::SetUI32 (UI_32 *f_ui32Value*)[inline]

Brief

This function is used to set UI_32 type value.

Parameters:

in	*f_ui32Value*	UI_32 - new UI_32 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 
E_CWORD33_Status CPassThruOutDataHandler::SetUI64 (UI_64 *f_ui64Value*)[inline]

Brief

This function is used to set UI_64 type value.

Parameters:

in	*f_ui64Value*	UI_64 - new UI_64 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

none

Here is the call graph for this function:

IMAGE 

E_CWORD33_Status CPassThruOutDataHandler::SetUI8 (UI_8 *f_ui8Value*)[inline]

Brief

This function is used to set UI_8 type value.

Parameters:

in	*f_ui8Value*	UI_8 - new UI_8 value

Return values:

E_CWORD33_Status	
e_CWORD33_StatusOK	- data retrieved
e_CWORD33_StatusInvldID	- set array element of different type

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

CRWLock Class Reference

Read/Write Lock Class.

#include <ns_utility_sys.hpp>

Public Member Functions

CRWLock ()
~CRWLock ()
void ReadLock ()
void WriteLock ()
void Unlock ()

Detailed Description

Read/Write Lock Class.

Brief Introduction

This class defines locking policy for reader/writer.

Constructor & Destructor Documentation

CRWLock::CRWLock ()

Brief

Construct a CRWLock object.

Prerequisite

None

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

~CRWLock()

CRWLock::~CRWLock ()

Brief

Destruct the CRWLock object.

Prerequisite

Construct a CRWLock object.

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CRWLock()

Member Function Documentation

void CRWLock::ReadLock ()

Brief

Lock the CRWLock object when reading.

Return values:

void	

Prerequisite

Construct a CRWLock object.

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CRWLock(), WriteLock(), UnLoack()

void CRWLock::Unlock ()

Brief

Open the lock of CRWLock object

Return values:

void	

Prerequisite

Construct a CRWLock object.

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CRWLock(), ReadLock(), WriteLock()

void CRWLock::WriteLock ()

Brief

Lock the CRWLock object when writing.

Return values:

void	

Prerequisite

Construct a CRWLock object.

Change of internal state

None

Classification

Public

Type

Sync Only

See also:

CRWLock(), ReadLock(), UnLock()

Detailed Description

CTestCaseData : Class used to fill testcase data from XML.

The documentation for this class was generated from the following file:
92 XMLParser.h

CXmlAttr Class Reference

This class represents the attribute of an xml node.

#include <ns_xmlparser_if.h>

Public Member Functions

CXmlAttr ()
CXmlAttr (std::string f_cKey, std::string f_cValue)
~CXmlAttr ()

Public Attributes

std::string **m_cKey**
std::string **m_cValue**

Detailed Description

This class represents the attribute of an xml node.

Brief Introduction

This class represents the attribute of an xml node.

Constructor & Destructor Documentation

CXmlAttr::CXmlAttr ()

Brief

CXmlAttr constructor

Parameters:

None	

Return values:

None	

Prerequisite

Load the shared library first

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

None

CXmlAttr::CXmlAttr (std::string *f_cKey*, std::string *f_cValue*)

Brief

CXmlAttr constructor

Parameters:

[IN]	f_cKey std::string - attributes key
[IN]	f_cValue std::string - attributes value

Return values:

None	

Prerequisite

Load the shared library first

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

None

CXmlAttr::~CXmlAttr ()

Brief

Destructor of CXmlAttr class

Parameters:

None	

Return values:

None	

Prerequisite

None

Inside state change

None

None

Classification

Public

Type

Sync Only

See also:

None

Friends

class **CXmlParser**

Detailed Description

This class represents node of an XML.

Brief Introduction

Provides API for performing operations on node.

Constructor & Destructor Documentation

CXmlNode::~CXmlNode ()

Brief

Destructor of CXmlNode class

Parameters:

None	

Return values:

None	

Prerequisite

None

Inside state change

None

None

Classification

Public

Type

Sync Only

See also:

None

Member Function Documentation

CXmlNode CXmlNode::AddChildNode (std::string *f_cNodeName*, std::string *f_cText* = "")

Brief

Add sub node

Parameters:

[IN]	f_cNodeName std::string - tag of the new node
[IN]	f_cText std::string - content of the new node

Return values:

CXmlNode	- object of child node

Prerequisite

Load the shared library first

Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::AddNewAttribute (std::string *f_cKey*, std::string *f_cAttributeValue*)

Brief

Add new attribute

Parameters:

[IN]	f_cKey std::string - attribute name
[IN]	f_cValue std::string - attribute value

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	Null pointer

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::AddSiblingNode (std::string *f_cNodeName*, std::string *f_cText* = "")

Brief

Add new node to siblings

Parameters:

[IN]	f_cNodeName std::string - tag of the new node
[IN]	f_cText std::string - content of the new node

Return values:

CXmlNode	- object of sibling node

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

TNodeList CXmlNode::Children ()

Brief

Get child list

Parameters:

None	

Return values:

TNodeList	- list of all child node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::ClearNode ()

Brief

Removes elements and attributes

Parameters:

None	

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	Null pointer

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

TNodeList CXmlNode::FindAllChildNodes (std::string *f_cNodeName*)

Brief

Get list of all the immediate sub node

Parameters:

[IN]	f_cNodeName std::string - tag name of the node

Return values:

TNodeList	- list of matching nodes

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::FindChildNode (std::string *f_cNodeName*)

Brief

Find child node

Parameters:

[IN]	f_cNodeName std::string - tag name of the node

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::FirstChild ()

Brief

Get first child

Parameters:

None	

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

TAttrList CXmlNode::GetAttributeItems ()

Brief

Get attributes list

Parameters:

None	

Return values:

TAttrList	- list of all attributes of node or empty list in case of no attributes

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::GetAttributeValue (std::string *f_cKey*, std::string & *f_cAttributeValue*)

Brief

Get attribute

Parameters:

[IN]	f_cKey std::string - attribute name
[OUT]	f_cAttributeValue std::string& - attribute value

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	Null pointer

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

std::string CXmlNode::GetContent ()

Brief

Get content

Parameters:

None	

Return values:

std::string	content of current node

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::GetContentOfChildNode (std::string *f_cNodeName*, std::string & *f_cContent*)

Brief

Find first level node

Parameters:

[IN]	f_cNodeName std::string - name of the node
[OUT]	f_cContent std::string& - content of the node

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusFail	Failed

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

BOOL CXmlNode::IsNull ()

Brief

Check xmlNodePtr

Parameters:

None	

Return values:

BOOL	true if valid else false

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::LastChild ()

Brief

Get last child

Parameters:

None	

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

std::string CXmlNode::Name ()

Brief

Get name

Parameters:

None	

Return values:

std::string	node name

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::NextSibling ()

Brief

Get next node

Parameters:

None	

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::Parent ()

Brief

Get parent

Parameters:

None	

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first

Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

CXmlNode CXmlNode::PrevSibling ()

Brief

Get previous node

Parameters:

None	

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::RemoveAttribute (std::string *f_cKey*)

Brief

Removes attribute

Parameters:

[IN]	f_cKey std::string - attribute name

Return values:

e_CWORD33_StatusOK	Success

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::RemoveChildNode (std::string *f_cNodeName*)

Brief

Remove child node

Parameters:

[IN]	f_cNodeName std::string - name of child node

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	Null pointer

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::SetAttributeValue (std::string *f_cKey*, std::string *f_cValue*)

Brief

Set attribute

Parameters:

[IN]	f_cKey std::string - attribute name
[IN]	f_cValue std::string - attribute value

Return values:

e_CWORD33_StatusOK	Success

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_Status CXmlNode::SetContent (std::string *f_cUpdatedText*)

Brief

Set content

Parameters:

[IN]	f_cUpdatedText std::string - updated value

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusNullPointer	Null pointer

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlNode

E_CWORD33_XmlNodeTypes CXmlNode::Type ()

Brief

Get type

Parameters:

None	

Return values:

_CWORD33__XML_NODE_NONE	not exist node
_CWORD33__XML_ELEMENT_NODE	element node
_CWORD33__XML_TEXT_NODE	text node
_CWORD33__XML_CDATA_SECTION_NODE	section node
_CWORD33__XML_ENTITY_REF_NODE	entity ref node
_CWORD33__XML_ENTITY_NODE	entity node
_CWORD33__XML_PI_NODE	PI node
_CWORD33__XML_COMMENT_NODE	comment node
_CWORD33__XML_DOCUMENT_NODE	document node
_CWORD33__XML_DOCUMENT_TYPE_NODE	document type node
_CWORD33__XML_DOCUMENT_FRAG_NODE	document frag node
_CWORD33__XML_NOTATION_NODE	notation node
_CWORD33__XML_HTML_DOCUMENT_NODE	document node
_CWORD33__XML_DTD_NODE	dtd node
_CWORD33__XML_ELEMENT_DECL	element decl
_CWORD33__XML_ATTRIBUTE_DECL	attribute decl

_CWORD33__XML_ENTITY_DECL	entity decl
_CWORD33__XML_NAMESPACE_DECL	namespace decl
_CWORD33__XML_XINCLUDE_START	include start
_CWORD33__XML_XINCLUDE_END	include end
_CWORD33__XML_DOCB_DOCUMENT_NODE	document node

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Member Function Documentation

CXmlNode CXmlParser::AddNewNode (CXmlNode *m_pParentNode*, std::string *f_cNewNodeName*, std::string *f_cContent* = "")

Brief

Create and add node

Parameters:

[IN]	f_pParentNode CXmlNode - parent node
[IN]	f_cNewNodeName std::string - tag name of the new node
[IN]	f_cContent std::string - text to set for the new node

Return values:

CXmlNode	- new node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Type

Sync Only

See also:

CXmlParser

E_CWORD33_Status CXmlParser::CreateNewXmlDoc (std::string *f_cRootNodeName*)

Brief

Creates new xml

Parameters:

[IN]	f_cRootNodeName std::string - root node name in new doc

Return values:

e_CWORD33_StatusOK	Success
e_CWORD33_StatusInvldParam	Invalid parameter
e_CWORD33_StatusNullPointer	Null pointer

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

CXmlParser

TNodeList CXmlParser::FindAllNodes (std::string *f_cNodePath*, CXmlNode *f_pCurrentNode*)

Brief

Find all matching node

Parameters:

[IN]	f_cNodePath std::string - name or path of node(XPath) path is relative to current node or absolute path
[IN]	f_pCurrentNode CXmlNode - current node

Return values:

TNodeList	- list of matching nodes

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Inside state change

The API no inside state change

None

Classification

Public

Type

Sync Only

See also:

CXmlParser

CXmlNode CXmlParser::FindNode (std::string *f_cNodePath*, CXmlNode *f_pCurrentNode*)

Brief

Find first matching node

Parameters:

[IN]	f_cNodePath std::string - name or path of node(XPath) path is relative to current node or absolute path

[IN]	f_pCurrentNode CXmlNode - current node

Return values:

CXmlNode	- node object

Prerequisite

Load the shared library first
Get CXmlNode from CXmlParser

Detailed Description

IConfigReader.

Brief Introduction

Class to provide class of parse config file.

Constructor & Destructor Documentation

IConfigReader::IConfigReader ()

Summary

Constructor of IConfigReader class.

Parameters:

none	

Return values:

None	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

~IConfigReader

virtual IConfigReader::~IConfigReader ()[virtual]

Summary

Destructor of IConfigReader class.

Parameters:

None	

Return values:

None	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

IConfigReader

Member Function Documentation

virtual PVOID IConfigReader::GetDataPtr ()[pure virtual]

Summary

This function is used to get the data pointer.

Parameters:

none.	

Return values:

PVOID	- pointer of data structure

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

IConfigReader

Implemented in CXMLReader.

virtual std::string IConfigReader::GetValue (const std::string & *f_c_key*)[pure virtual]

Summary

This function is used to get the value associated with the key.

Parameters:

[IN]	f_c_key const std::string - key to search.

Return values:

l_cValue	value for key

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

IConfigReader

Implemented in CXMLReader.

virtual E_CWORD33_Status IConfigReader::GetValue (const std::string & *f_c_key*, std::string & *f_c_value*)[pure virtual]

Summary

This function is used to get the value associated with the key.

Parameters:

[IN]	f_c_key const std::string - key to search.
[OUT]	f_c_value const std::string - value for key.

Return values:

E_CWORD33_Status	error error if key not found else e_CWORD33_StatusOK

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

See also:

IConfigReader

Implemented in CXMLReader.

virtual E_CWORD33_Status IConfigReader::ParseFile (const std::string & *f_c_filepath*)[pure virtual]

Summary

This function is used to parse the file.

Parameters:

[IN]	f_c_filepath const std::string - path of file to parse.

Return values:

E_CWORD33_Status	

Preconditions

None.

Change of the internal state

Change of internal state according to the API does not occur.

Classification

Public

Type

sync only

virtual E_CWORD33_Status SaveData ()=0
virtual E_CWORD33_Status SetPath (const std::string &f_cpath)=0
virtual VOID SetDataPtr (PVOID f_pdata)=0

Detailed Description

Config writer abstract class.

Brief Introduction

IConfigWriter is an abstract class which is inherited by
different type configuration file writer class.

Constructor & Destructor Documentation

IConfigWriter::IConfigWriter ()

Brief

Constructor of IConfigWriter class

Parameters:

None	

Return values:

none	

Preconditons

None

Change of internal status

None

Classification

Public

Type

Sync only

See also:

~IConfigWriter

virtual IConfigWriter::~IConfigWriter ()[virtual]

~

Brief

Destructor of IConfigWriter class

Parameters:

None	

Return values:

none	

Preconditons

Calls constructor to successfully create object.

Change of internal status

None

Classification

Public

Type

Sync only

See also:

IConfigWriter

Member Function Documentation

virtual E_CWORD33_Status IConfigWriter::ParseFile (const std::string & *f_c_filepath*)[pure virtual]

Brief

This function is used to parse the file.

Parameters:

in	*f_c_filepath*	std::string - path of file to parse

Return values:

E_CWORD33_Status	- success or failure

Preconditons

Calls constructor to successfully create object.

Change of internal status

None

Classification

Public

Type

Sync only

See also:

None

Implemented in CXMLWriter.

virtual E_CWORD33_Status IConfigWriter::SaveData ()[pure virtual]

Brief

This function is used to save the changed value permanently to the config source

Parameters:

None	

Return values:

none	

Preconditons

None

Change of internal status

None

Classification

Public

Type

Sync only

See also:

None

Implemented in CXMLWriter.

virtual VOID IConfigWriter::SetDataPtr (PVOID *f_pdata*)[pure virtual]

Brief

This function is used to set the data pointer in config writer class with data pointer created in config reader class.
This is needed to avoid recreation of same data structure object in both reader and writer
when we create object of NSConfigParser.

Parameters:

in	*f_pdata*	PVOID - Pointer to data structure

Return values:

None	

Preconditons

None

Change of internal status

None

Classification

Public

Type

Sync only

See also:

None

Implemented in CXMLWriter.

virtual E_CWORD33_Status IConfigWriter::SetPath (const std::string & *f_cpath*)[pure virtual]

Brief

This function is used to set the config file path

Parameters:

in	*f_cpath*	std::string - Path of file

Return values:

E_CWORD33_Status	- success or failure

Preconditons

None

Change of internal status

None

Classification

Public

Type

Sync only

See also:

None

Implemented in CXMLWriter.

virtual E_CWORD33_Status IConfigWriter::SetValue (const std::string & *f_c_key*, std::string *f_c_value*)[pure virtual]

Brief

This function is used to set the value for the key

Parameters:

in	*f_c_key*	std::string - key to search
in	*f_c_value*	std::string - value to set

Return values:

E_CWORD33_Status	- error if key not found else e_CWORD33_StatusOK

Preconditons

Calls constructor to successfully create object.

Change of internal status

None

Classification

Public

Type

Sync only

See also:

None

Implemented in CXMLWriter.

NSTimer Class Reference

Handle Timer.

#include <ns_timer_if.hpp>

Public Member Functions

NSTimer ()
~NSTimer ()
E_CWORD33_Status SetNotifyMethod (UI_16 notifyCmdId, PCSTR notifyToAppName)
VOID SetRepeatTimer (BOOL repeatTimer)
VOID SetTime (UI_32 seconds, UI_64 msecs)
VOID SetTime (UI_32 hrs, UI_32 mins, UI_32 seconds, UI_64 msecs)
E_CWORD33_Status Start (UI_32 seconds, UI_64 msecs)
E_CWORD33_Status Start ()
E_CWORD33_Status Stop ()
BOOL IsRunning ()
UI_64 GetInterval ()

Detailed Description

Handle Timer.

Brief Introduction

Timer class is using to handle the timer.creating, starting, stopping,and so on.

Constructor & Destructor Documentation

NSTimer::NSTimer ()

Brief

Creates a timer object with default behavior as single timeout timer.

Return values:

none	

Preconditons

-None

Change of internal status

None

Classification

Public

Type

See also:

~NSTimer

NSTimer::~NSTimer ()

Brief

Deletes a timer object.

Return values:

none	

Preconditons

-Instance of this class is created successfully.

Change of internal status

None

Classification

Public

Type

-None

See also:

NSTimer

Member Function Documentation

UI_64 NSTimer::GetInterval ()

Brief

Returns timeout interval in milliseconds

Return values:

UI_64	- Timeout interval in milliseconds

Preconditons

-None

Change of internal status

None

Classification

Public

Type

-None

See also:

None

BOOL NSTimer::IsRunning ()

Brief

Returns timer running status

Return values:

BOOL	- TRUE if timer is running else FALSE

Preconditons

-None

Change of internal status

None

Classification

Public

Type

-None

See also:

Start, Start(UI_32, UI_64), SetNotifyMethod, NS_TimerSetTime

E_CWORD33_Status NSTimer::SetNotifyMethod (UI_16 *notifyCmdId*, PCSTR *notifyToAppName*)

Brief

This function overloads SetNotifyMethod(). On timeout, sends the command id to the message queue of specified application. Resets previous notify method if any.

Parameters:

in	*notifyCmdId*	UI_16 - command id.
in	*notifyToAppName*	PCSTR - Send command id to the message queue of this application

Return values:

E_CWORD33_Status	- Returns e_CWORD33_StatusOK if the action is set otherwise e_CWORD33_StatusFail
e_CWORD33_StatusOK	- Success
e_CWORD33_StatusInvldParam	- Invalid parameter
e_CWORD33_StatusFail	- process error

Preconditons

-None

Change of internal status

None

Classification

Public

Type

-None

See also:

McOpenSender, McClose, NS_TimerCreate

VOID NSTimer::SetRepeatTimer (BOOL *repeatTimer*)

Brief

Sets the timer as a repeat timer. Timer timeouts repeatedly as per the interval set. Default timer fires only once. Not effective, if the timer is running. Effective on next Start() or Start(seconds, msecs) call.

Parameters:

in	*repeatTimer*	BOOL - TRUE - set repeat timer FALSE - set single timeout timer. (Default behavior)

Return values:

none	

Preconditons

-None

VOID NSTimer::SetTime (UI_32 *seconds*, UI_64 *msecs*)

Brief

Set the interval of timeout. Interval is addition of seconds and milliseconds passed as an arguments.

Parameters:

in	*seconds*	UI_32 - Time in seconds
in	*msecs*	UI_64 - Time in milliseconds

Return values:

none

VOID NSTimer::SetTime (UI_32 *hrs*, UI_32 *mins*, UI_32 *seconds*, UI_64 *msecs*)

Brief

This function overloads SetTime(). Set the interval of timeout. Interval is addition of hrs, mins, seconds and milliseconds passed as an arguments.

Parameters:

in	*hrs*	UI_32 - Time in hours
in	*mins*	UI_64 - Time in minutes
in	*seconds*	UI_32 - Time in seconds
in	*msecs*	UI_64 - Time in milliseconds

Return values:

none

E_CWORD33_Status NSTimer::Start (UI_32 *seconds*, UI_64 *msecs*)

Brief

Starts or restarts timer with specified time interval. Interval is addition of seconds and milliseconds passed as an arguments.

Parameters:

in	*seconds*	UI_32 - Time in seconds
in	*msecs*	UI_64 - Time in milliseconds

Return values:

E_CWORD33_Status	- Returns e_CWORD33_StatusOK on success otherwise e_CWORD33_StatusFail

Preconditons

Create a timer handle of instance by SetNotifyMethod()

Change of internal status

None

Classification

Public

Type

None

See also:

SetTime(UI_32, UI_64), Start, Stop, SetNotifyMethod

E_CWORD33_Status NSTimer::Start ()

Brief

This function overloads Start(). Starts or restarts timer with interval specified using SetTime() or last interval (if the timer was started before using Start(seconds, msecs)).

Return values:

E_CWORD33_Status	- Returns e_CWORD33_StatusOK on success otherwise e_CWORD33_StatusFail

Preconditons

Create a timer handle of instance by SetNotifyMethod()

Change of internal status

None

Classification

Member Function Documentation

void XMLParser::createTestCaseVector (std::vector< xmlNodePtr > & *testCaseNodeVector*, xmlDocPtr & *xmlFileHandle*, std::vector< CTestCaseData > & *testCaseDataVector*)

createTestCaseVector

Parameters:

in	*testCaseNodeVector*	vector<xmlNodePtr> xmlFileHandle xmlDocPtr testCaseDataVector vector<CTestCaseData>

Returns:

none

void XMLParser::fillMacroVector (xmlDocPtr & *xmlFileHandle*, std::vector< xmlNodePtr > & *macroNodeVector*, std::string & *expOutValue*, std::list< std::string > & *expOutputVector*, std::string & *macroSecDelayVal*, std::string & *macroMSecDelayVal*, std::string & *macroUSecDelayVal*, std::vector< std::string > & *paramMacroVector*)

fillMacroVector

Parameters:

in	*node*	xmlFileHandle xmlDocPtr macroNodeVector vector<xmlNodePtr> expOutValue string expOutputVector list<std::string> macroDelayVal string paramMacroVector vector<std::string>

Returns:

none

void XMLParser::getChildNodeList (xmlNodePtr *node*, std::vector< xmlNodePtr > & *nodeVector*)

getChildNodeList

Parameters:

in	*node*	xmlNodePtr nodeVector vector<xmlNodePtr>

Returns:

none

void XMLParser::GetXmlExpectedOutput (std::string *pKey*, std::string *pValue*)

GetXmlExpectedOutput

Parameters:

in	*pKey*	string pValue string

Returns:

none

std::string XMLParser::GetXmlNodeAttributeValueToString (void * *arg*, const char * *str*, xmlDocPtr *xmlFileHandle*)

GetXmlNodeAttributeValueToString

Parameters:

in	*arg*	void * str const char * xmlFileHandle xmlDocPtr

Returns:

none

void XMLParser::populateTestCaseMap (std::vector< CTestCaseData > & *testCaseDataVector*, xmlDocPtr *xmlFileHandle*)

populateTestCaseMap

Parameters:

in	*testCaseDataVector*	vector<CTestCaseData> xmlFileHandle xmlDocPtr

Returns:

none

void XMLParser::readAllXml (const std::string & *xmlInputFile*, std::list< std::string > & *xmlList*)

readAllXml read all XML files from xmlInputFile

Parameters:

in	*xmlInputFile*	string xmlList string

Returns:

none

static int XMLParser::StringToNumber (const std::string & *Text*)[inline], [static]

StringToNumber Convert the string to number

Parameters:

in	*Text*	string

Returns:

number value

void XMLParser::updateXmlActualOutput (const std::string & *xmlName*, std::string & *testCaseName*, std::string & *actualOutput*)

updateXmlActualOutput

Parameters:

in	*xmlName*	string testCaseName string

Returns:

none

Detailed Description

include all framework_unified head files

notification_persistent_service.h File Reference

include all notification_persistent_service head files

Detailed Description

include all notification_persistent_service head files

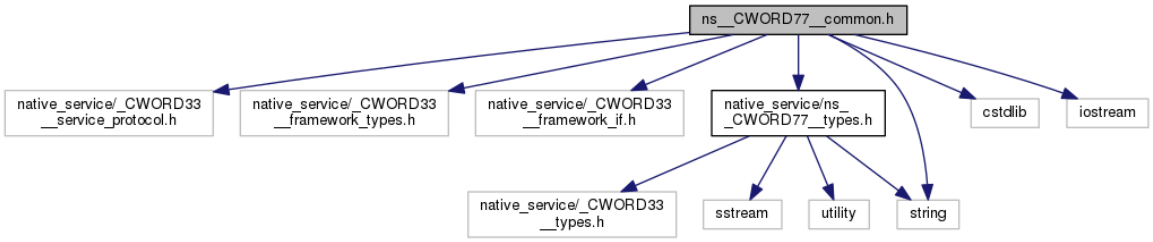
ns__CWORD77__common.h File Reference

This file has templet class declaration of CCallback and CResCallback.

#include <native_service/_CWORD33__service_protocol.h>
#include <native_service/_CWORD33__framework_types.h>
#include <native_service/_CWORD33__framework_if.h>
#include <native_service/ns__CWORD77__types.h>
#include <cstdlib>
#include <iostream>
#include <string>

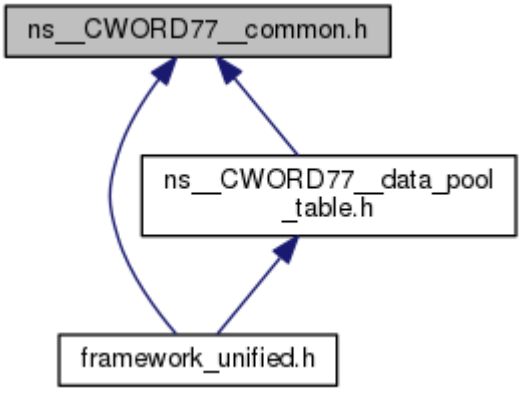
Include dependency graph for ns__CWORD77__common.h:

IMAGE



This graph shows which files directly or indirectly include this file:

IMAGE



Classes

class CCallback< C, M >
class CResCallback< C, M >

Macros

#define **MAX_DATA_SIZE** 512;
#define **DELETEPTR**(p) {if (p != NULL) {delete p; p = NULL;}}

Typedefs

typedef E_CWORD33_Status(* **_CWORD77_FuncPtr**) (HANDLE hApp, BOOL bTImerExpiry)

typedef E_CWORD33_Status(* **ResponseServiceTo_CWORD77_**) (HANDLE hApp,
E_CWORD77_ResponseType ResponseType, std::string ServiceName)
typedef boost::function< E_CWORD33_Status(HANDLE, std::string, std::string, UI_32,
E_CWORD33_Status) > **SessionAckTo_CWORD77_**

Detailed Description

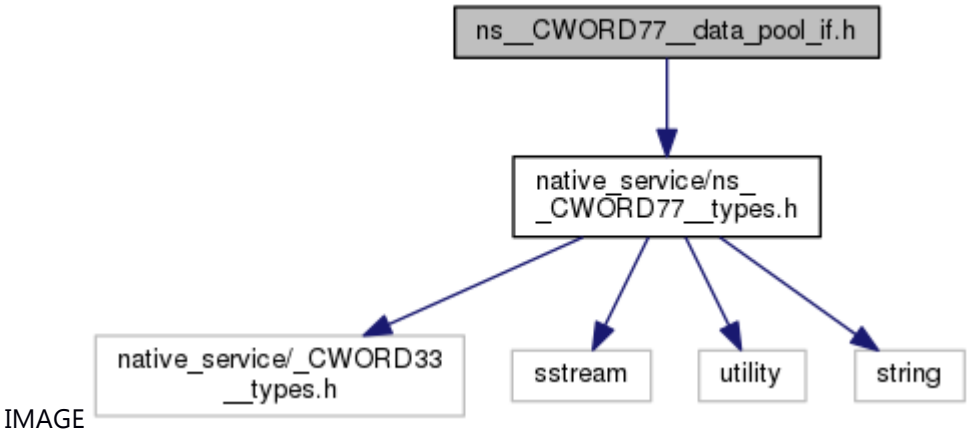
This file has templet class declaration of CCallback and CResCallback.

ns__CWORD77__data_pool_if.h File Reference

This file provides api to operating _CWORD77_DataPool.

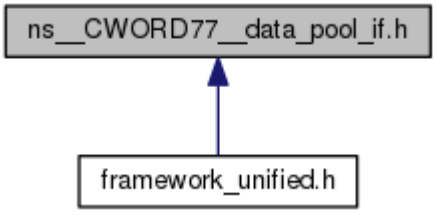
#include <native_service/ns__CWORD77__types.h>

Include dependency graph for ns__CWORD77__data_pool_if.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Functions

VOID SetReqDataIn_CWORD77_DataPool (const _CWORD77_DataPoolKey &f_DataPoolKey, UI_32 f_uiSize, PVOID f_pData)

E_CWORD33_Status GetRespDataFrom_CWORD77_DataPool (const _CWORD77_DataPoolKey &f_DataPoolKey, UI_32 &f_uiSize, PVOID &f_pData)

VOID SetRespNotfnDataIn_CWORD77_DataPool (const std::string &f_cNotificationName, UI_32 f_uiSize, const PVOID f_pData)

E_CWORD33_Status GetRespNotfnDataFrom_CWORD77_DataPool (const std::string &f_cNotificationName, UI_32 &f_uiSize, PVOID &f_pData)

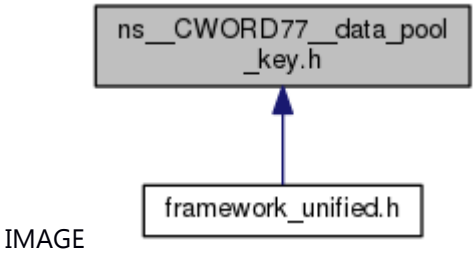
Detailed Description

This file provides api to operating _CWORD77_DataPool.

ns__CWORD77__data_pool_key.h File Reference

Provide function _CWORD77__DATA_POOL_KEY of make_pair.

This graph shows which files directly or indirectly include this file:



IMAGE

Macros

#define _CWORD77__DATA_POOL_KEY(ProtocolId) (std::make_pair(ProtocolId, g_c_CWORD77_ServiceName))

Detailed Description

Provide function _CWORD77__DATA_POOL_KEY of make_pair.

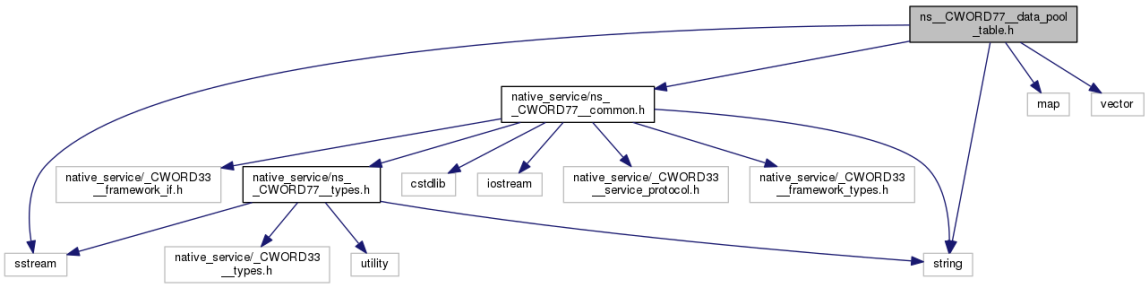
ns__CWORD77__data_pool_table.h File Reference

This file provides API for convert and C_CWORD77_DataPool class.

#include <native_service/ns__CWORD77__common.h>
#include <sstream>
#include <map>
#include <string>
#include <vector>

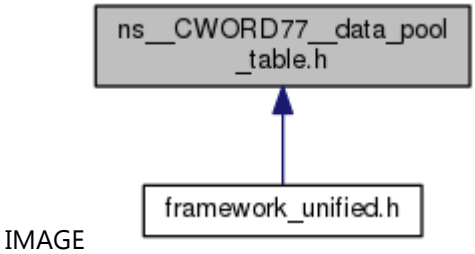
Include dependency graph for ns__CWORD77__data_pool_table.h:

IMAGE



This graph shows which files directly or indirectly include this file:

IMAGE



Classes

struct __CWORD77_Data

CWORD77 Data structure *More...*

class C_CWORD77_DataPool

class C_CWORD77_Data

UI_32 GetRequestDataLength (UI_32 Key)
UI_32 GetResponseDataLength (UI_32 Key)
EDataType GetRequestDataType (UI_32 Key)
EDataType GetResponseDataType (UI_32 Key)

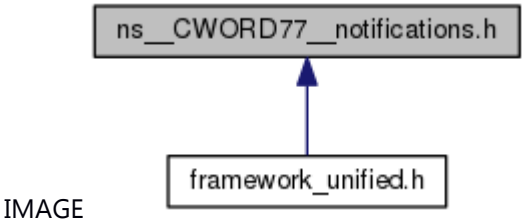
Detailed Description

This file provides API for convert and C_CWORD77_DataPool class.

ns__CWORD77__notifications.h File Reference

This file defines *CWORD77* Service Availability Notification.

This graph shows which files directly or indirectly include this file:



IMAGE

Macros

#define NTFY_REG__CWORD77__Available "_CWORD77_/Available"

CWORD77 Service Availability Notification

Detailed Description

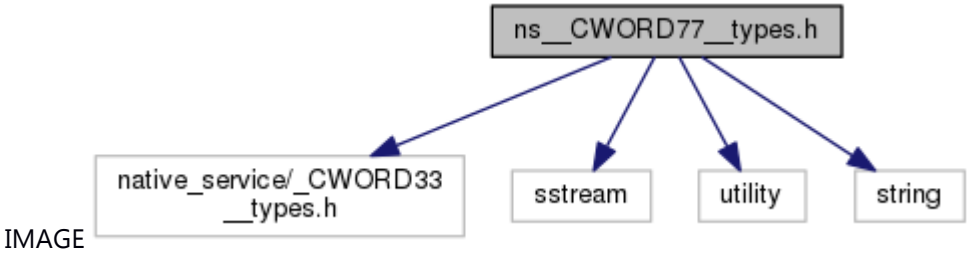
This file defines *CWORD77* Service Availability Notification.

ns__CWORD77__types.h File Reference

This file contains enum of PE_CWORD77_ResponseType.

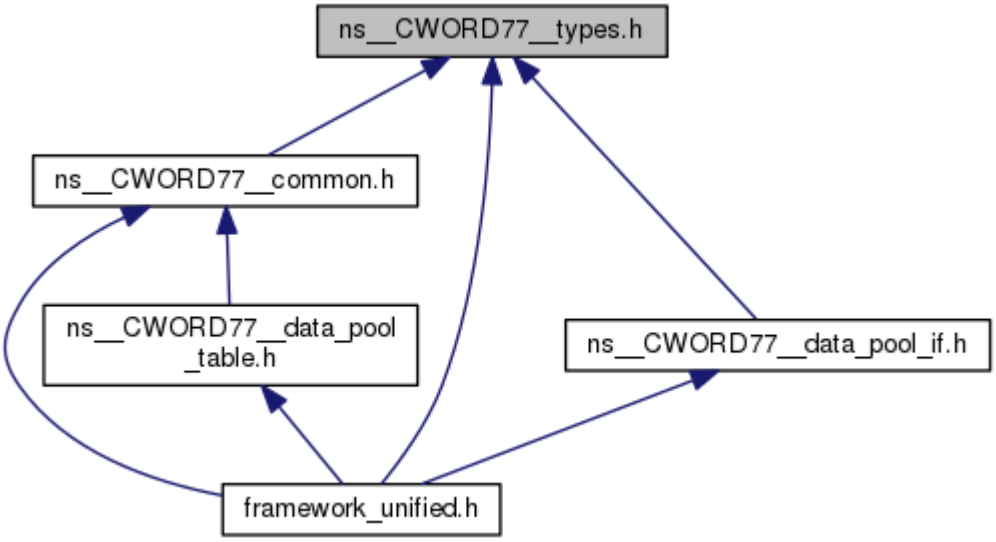
#include <native_service/_CWORD33__types.h>
#include <sstream>
#include <utility>
#include <string>

Include dependency graph for ns__CWORD77__types.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

enum **_E_CWORD77_ResponseType** { **RESPONSE** = ***, **NOTIFICATION**, **EVENT** }
typedef enum _E_CWORD77_ResponseType **E_CWORD77_ResponseType**
typedef enum _E_CWORD77_ResponseType * **PE_CWORD77_ResponseType**
typedef std::pair< UI_32, std::string > **_CWORD77_DataPoolKey**

Detailed Description

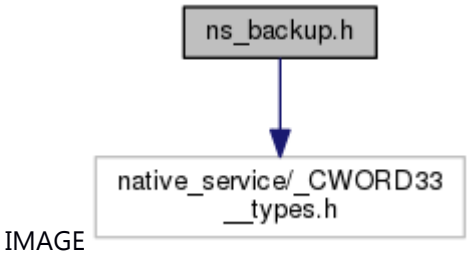
This file contains enum of PE_CWORD77_ResponseType.

ns_backup.h File Reference

backup_manager function header file

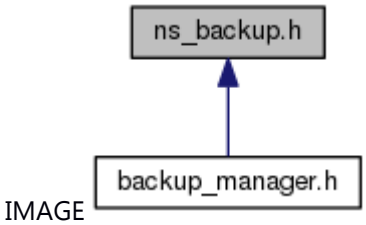
#include <native_service/_CWORD33__types.h>

Include dependency graph for ns_backup.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Macros

#define NTFY_BackupMgr_Availability "NS_BackupMgr/Availability"
#define BKUP_RET_NORMAL 0
#define BKUP_RET_ERROR -1
#define BKUP_RET_ERRPARAM -2
#define BKUP_RET_ERRINIT -3
#define BKUP_RET_ERRTERM -4
#define BKUP_RET_ERRNOENT -5
#define BKUP_RET_ERRSIZE -6

Functions

int32_t Backup_DataRd (PCSTR tag_id, uint32_t ui_offset, void *pv_buf, uint32_t ui_size)
int32_t Backup_DataWt (PCSTR tag_id, void *pv_buf, uint32_t ui_offset, uint32_t ui_size)
int32_t Backup_DataFil (PCSTR tag_id, uint32_t ui_offset, uint8_t uc_pat, uint32_t ui_size)
int32_t Backup_DataSz (PCSTR tag_id, uint32_t *pui_size)
int32_t Backup_DataRdByNumID (uint32_t num_id, uint32_t ui_offset, void *pv_buf, uint32_t ui_size)
int32_t Backup_DataSzByNumID (uint32_t num_id, uint32_t *pui_size)
int32_t Backup_DataChk (PCSTR tag_id)
int32_t Backup_DataDel (PCSTR tag_id)

Detailed Description

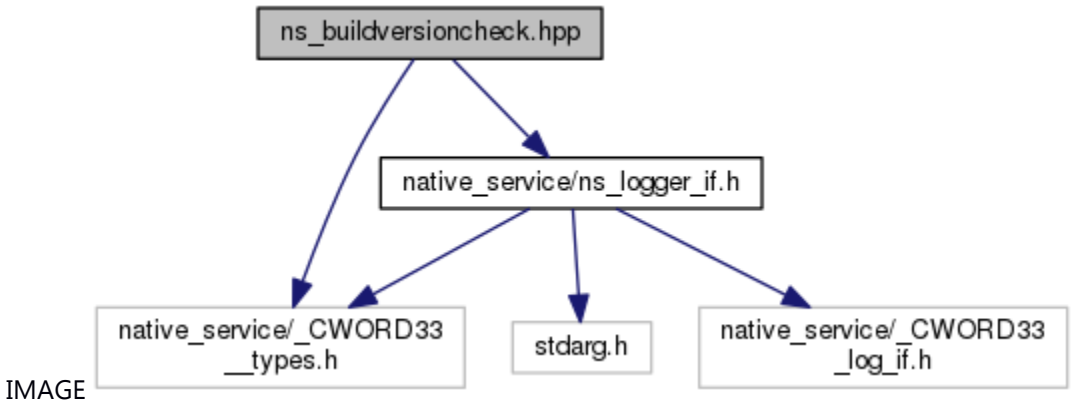
backup_manager function header file

ns_buildversioncheck.hpp File Reference

Provide the APIs to check/get version.

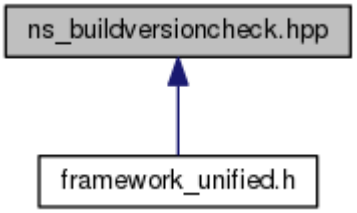
#include <native_service/_CWORD33__types.h>
#include <native_service/ns_logger_if.h>

Include dependency graph for ns_buildversioncheck.hpp:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Namespaces

CWORD33
CWORD33::ns
CWORD33::ns::utility
CWORD33::ns::utility::utility_private

Macros

#define _BUILD_VERSION_ ""
#define WARNING_STRING "\n\!!! WARNING - Build Versions do not match !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!\n\project build: %s\n\library build: %s\n\environment build: %s\n\!!!"
#define BUILDVERSIONLOG(___log_string___, ...) TEXT(__PRETTY_FUNCTION__, ___log_string___, __VA_ARGS__)
#define BUILDVERSION_NULL_STATEMENT ((void)0)
#define CHECK_BUILD_VERSION()

Functions

BOOL _CWORD33_::ns::utility::buildVersionsMatch (PCSTR build_version)
PCSTR _CWORD33_::ns::utility::getEnvironmentBuildVersion ()
PCSTR _CWORD33_::ns::utility::getLibraryBuildVersion ()
PCSTR _CWORD33_::ns::utility::utility_private::niceBuildVersion (PCSTR build_version)

Detailed Description

Provide the APIs to check/get version.

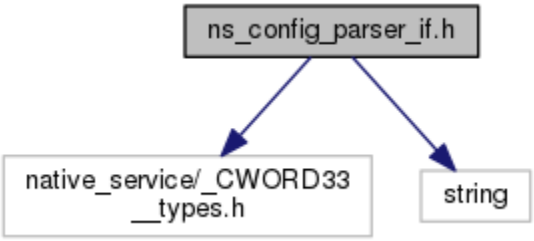
ns_config_parser_if.h File Reference

This file contains declaration of class CNSConfigReader, CNSConfigWriter and CNSConfigParser. API define head file.

#include <native_service/_CWORD33__types.h>
#include <string>

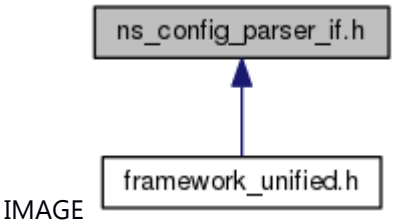
Include dependency graph for ns_config_parser_if.h:

IMAGE



This graph shows which files directly or indirectly include this file:

IMAGE



Classes

class CNSConfigReader

Configuration File Read Service Class. class CNSConfigWriter

File Write Service Class. class CNSConfigParser

File both Reade and Write Service Class.

Detailed Description

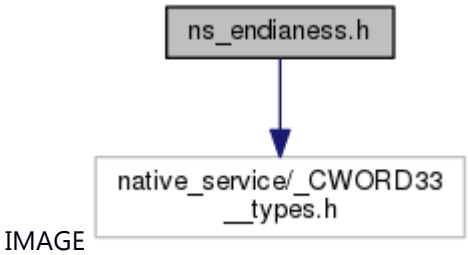
This file contains declaration of class CNSConfigReader, CNSConfigWriter and CNSConfigParser. API define head file.

ns_endianess.h File Reference

Provide api for convert value.

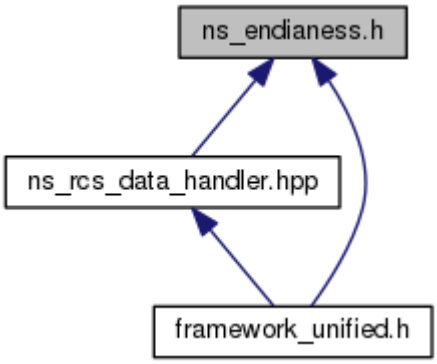
#include <native_service/_CWORD33__types.h>

Include dependency graph for ns_endianess.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Functions

UI_16 ConvertEndian_UI16 (UI_16 f_value)
SI_16 ConvertEndian_SI16 (SI_16 f_value)
UI_32 ConvertEndian_UI32 (UI_32 f_value)
SI_32 ConvertEndian_SI32 (SI_32 f_value)
UI_64 ConvertEndian_UI64 (UI_64 f_value)
SI_64 ConvertEndian_SI64 (SI_64 f_value)

Detailed Description

Provide api for convert value.

ns_eventlogger.h File Reference

structures used by ns_logger.cpp for event and counter logging

This graph shows which files directly or indirectly include this file:

IMAGE 
Classes

struct _stLogEvent_
struct _stLogCount_

Macros

#define **EVENTLOG_MSGQ_NAME** "/EvntLogQue"

Typedefs

typedef enum _Datatype_ **Datatype**
typedef enum _SystemPhase_ **SystemPhase**
typedef enum _NStoSS_LOGGERSERVICEPROTOCOL **NStoSS_loggerserviceprotocol**
typedef struct _stLogEvent_ **st_LogEvent**
typedef struct _stLogCount_ **st_LogCount**

Enumerations

enum **_Datatype_** { **COMMON**, **EVENT_SPECIFIC** }
enum **_SystemPhase_** { **STARTUP** = ***, **NORMAL** = ***, **SHUTDOWN** = *** }
enum **_NStoSS_LOGGERSERVICEPROTOCOL** { **SS_MSG_EVTLOG** = ***, **SS_MSG_LOGGERCNT**, **SS_MSG_LOGGER_CNT_EVTLOG** }

Detailed Description

structures used by ns_logger.cpp for event and counter logging

ns_logger_if.h File Reference

Declares the external APIs to Logger.

#include <native_service/_CWORD33__types.h>
#include <stdarg.h>
#include <native_service/_CWORD33_log_if.h>

Include dependency graph for ns_logger_if.h:

Functions

TMemID SetDataToShared (const void *data, UI_32 dataBytes, const char *from, const char *to)
E_CWORD33_Status GetDataFromShared (TMemID id, void *data, UI_32 dataMaxBytes)
UI_32 GetLengthOfDataFromShared (TMemID id)
E_CWORD33_Status DiscardDataFromShared (TMemID id)

Detailed Description

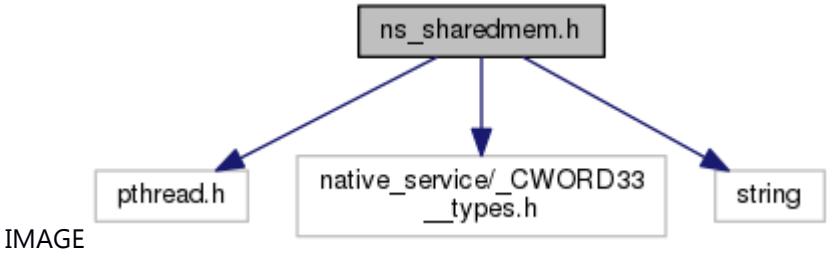
API Header for Logger. Declares the external APIs to Logger.

ns_sharedmem.h File Reference

This file contains implementation of class CNSSharedMem. This class provides API to open, read, write and close shared memory.

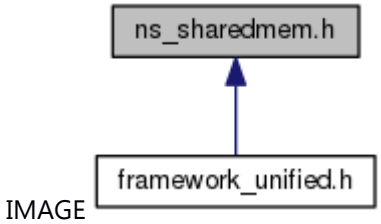
#include <pthread.h>
#include <native_service/_CWORD33__types.h>
#include <string>

Include dependency graph for ns_sharedmem.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Classes

struct _NSSharedBuffer
class CNSSharedMem
this file has the C_CWORD33_Guard class definitions #define **NSTEST_FAIL_SHAREDMEM_OPEN** "NSTEST_FAIL_SHAREDMEM_OPEN"
typedef struct _NSSharedBuffer **NSSharedBufferHdr**

Detailed Description

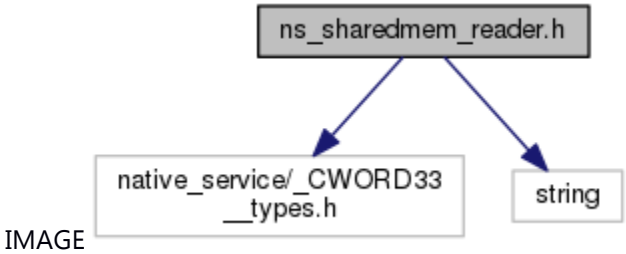
This file contains implementation of class CNSSharedMem. This class provides API to open, read, write and close shared memory.

ns_sharedmem_reader.h File Reference

This file contains implementation of class CNSSharedMemReader. This class provides API to open, close and perform read operation on shared memory.

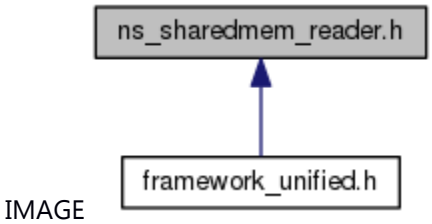
#include <native_service/_CWORD33__types.h>
#include <string>

Include dependency graph for ns_sharedmem_reader.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Classes

class CNSSharedMemReader
read shared memory

Detailed Description

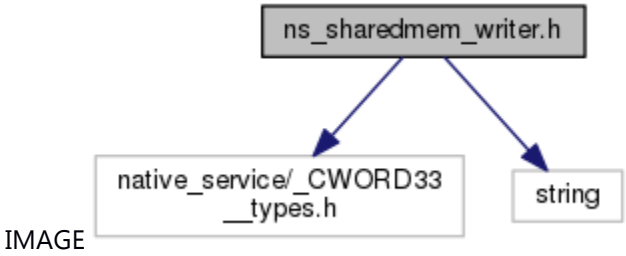
This file contains implementation of class CNSSharedMemReader. This class provides API to open, close and perform read operation on shared memory.

ns_sharedmem_writer.h File Reference

This file contains implementation of class CNSSharedMemWriter. This class provides API to open, close and perform write operation on shared memory.

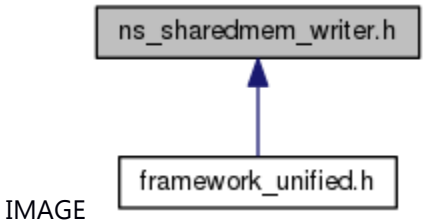
#include <native_service/_CWORD33__types.h>
#include <string>

Include dependency graph for ns_sharedmem_writer.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Classes

class CNSSharedMemWriter

write shared memory

Detailed Description

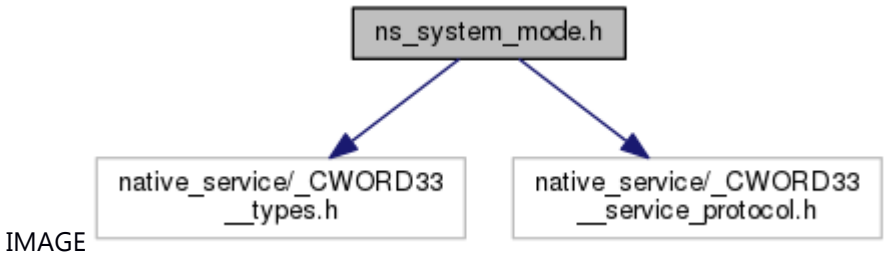
This file contains implementation of class CNSSharedMemWriter. This class provides API to open, close and perform write operation on shared memory.

ns_system_mode.h File Reference

The file defines enum SystemModeProtocol.

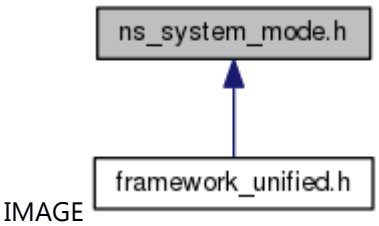
#include <native_service/_CWORD33__types.h>
#include <native_service/_CWORD33__service_protocol.h>

Include dependency graph for ns_system_mode.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

enum _SystemModeProtocol { SYSTEM_ON_INITIALIZATION = PROTOCOL_THREAD_INITIALIZATION, SYSTEM_ON_WAKEUP = PROTOCOL_THREAD_WAKEUP, SYSTEM_ON_SHUTDOWN = PROTOCOL_THREAD_SHUTDOWN, SYSTEM_ON_DESTROY = PROTOCOL_THREAD_DESTROY }*System Mode Protocol.*

typedef enum _SystemModeProtocol SystemModeProtocol

System Mode Protocol.

Detailed Description

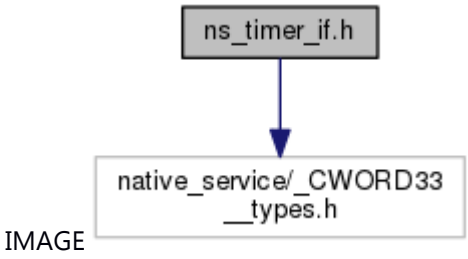
The file defines enum SystemModeProtocol.

ns_timer_if.h File Reference

APIs to create, delete and use Native Service timers .

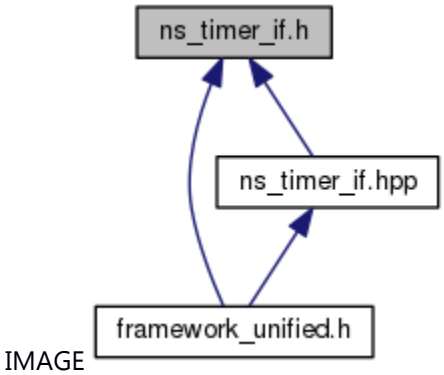
#include <native_service/_CWORD33__types.h>

Include dependency graph for ns_timer_if.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Classes

struct _NSTimerInfo

Timer info, defines the initial start of a timer, the repeat timer values and the cmd id for a timer. More...

Macros

#define **TIMER_QUE** "TIMER"
#define **MAX_SERVICE_NAME** 15

Typedefs

typedef void(* TimerCb) (UI_16 cmd)

Timer Function Pointer definition Detailed description of the class.

typedef struct _NSTimerInfo NSTimerInfo

Timer info, defines the initial start of a timer, the repeat timer values and the cmd id for a timer.

typedef enum _NSTimerCallbackMechanism eNSTimerCallbackMechanism

Enum Types for valid Callback Mechanisms for a NS_Timer.

Enumerations

enum _NSTimerCallbackMechanism { **CALLBACK_MESSAGE** }*Enum Types for valid Callback Mechanisms for a NS_Timer.*

Functions

time_t WholeSeconds (UI_32 ms)

Helper methods that convert time provided in MS. mseconds.

UI_32 RemainderMs (UI_32 ms)
UI_64 MSToNS (UI_32 ms)
HANDLE NS_TimerCreate (NSTimerInfo timer_info, eNSTimerCallbackMechanism cbMech, HANDLE sndMqHndl)
E_CWORD33_Status NS_TimerDelete (HANDLE hTimer)
E_CWORD33_Status NS_TimerSetTime (HANDLE hTimer, NSTimerInfo timer_info)
E_CWORD33_Status NS_TimerGetTime (HANDLE hTimer, NSTimerInfo *timer_info)
void NS_TimerDebugOn (BOOL FlagState)

Detailed Description

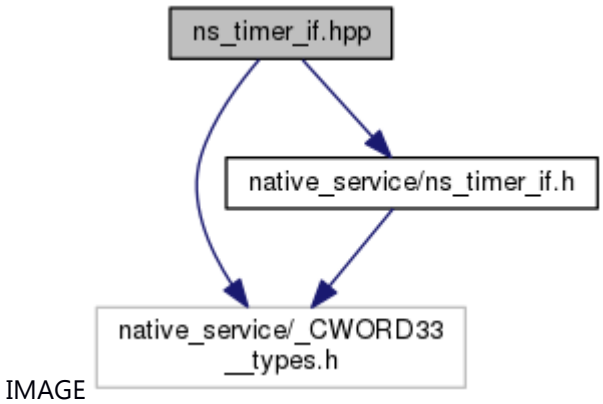
APIs to create, delete and use Native Service timers .

ns_timer_if.hpp File Reference

Header file for Timer class.

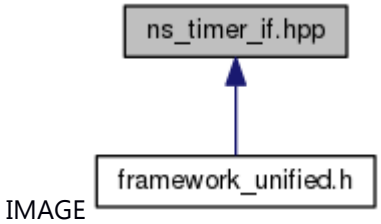
#include <native_service/_CWORD33__types.h>
#include <native_service/ns_timer_if.h>

Include dependency graph for ns_timer_if.hpp:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Classes

class NSTimer

Handle Timer.

Detailed Description

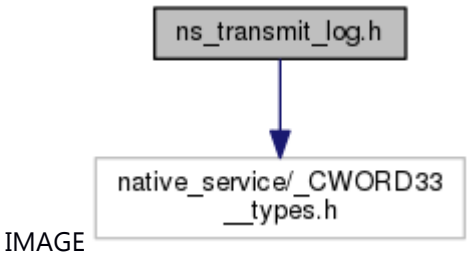
Header file for Timer class.

ns_transmit_log.h File Reference

This file contains declaration of wrapper C type API's for class CNSSharedMem to read and write transmit log to shared memory.

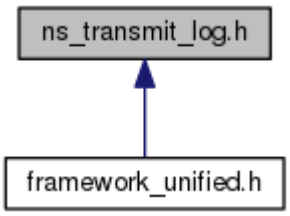
#include <native_service/_CWORD33__types.h>

Include dependency graph for ns_transmit_log.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

#define **TRANSMIT_LOG_SHAREDMEM_NAME** "/TransmitLogShBuf"
#define **TRANSMIT_LOG_SHAREDMEM_SIZE** 5242880
E_CWORD33_Status NSSharedMemTransmitLogOpen ()
E_CWORD33_Status NSSharedMemTransmitLogClose ()
SI_32 NSSharedMemReadTransmitLog (PSTR f_pBuffer, const UI_32 f_uiLength, const BOOL f_bBlock)
SI_32 NSSharedMemWriteTransmitLog (PCSTR f_pBuffer, const UI_32 f_uiLength)
E_CWORD33_Status NSSharedMemDumpTransmitLogToFile (PCSTR f_pPath, PUI_32 f_puiDumpSize)
BOOL NSSharedMemTransmitLogIsOpen ()

Detailed Description

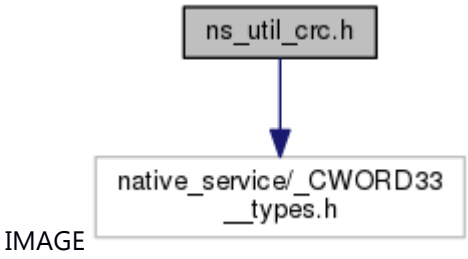
This file contains declaration of wrapper C type API's for class CNSSharedMem to read and write transmit log to shared memory.

ns_util_crc.h File Reference

This file contains declaration of APIs to calcuate 16-bit and 32-bit CRC checksum of file.

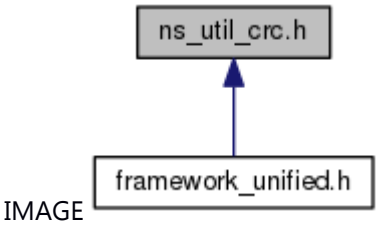
#include <native_service/_CWORD33__types.h>

Include dependency graph for ns_util_crc.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Functions

E_CWORD33_Status CalculateCRC16 (PCSTR f_c_file_name, UI_16 &f_ui_check_sum)
E_CWORD33_Status CalculateCRC32 (PCSTR f_c_file_name, UI_32 &f_ui_check_sum)

Detailed Description

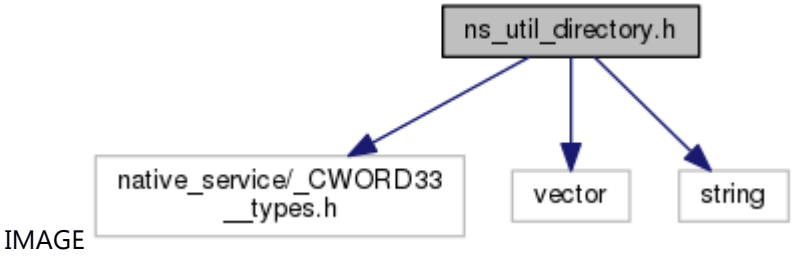
This file contains declaration of APIs to calcuate 16-bit and 32-bit CRC checksum of file.

ns_util_directory.h File Reference

This file contains declaration of ns_util_directory.

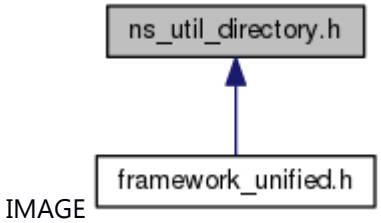
#include <native_service/_CWORD33__types.h>
#include <vector>
#include <string>

Include dependency graph for ns_util_directory.h:



IMAGE

This graph shows which files directly or indirectly include this file:



IMAGE

Typedefs

typedef std::vector< std::string > TFileList
typedef TFileList::iterator TFileListIterator

Functions

E_CWORD33_Status GetFileList (TFileList *f_pv_tfile_list, PCSTR f_pc_path)
BOOL DoesDirecotryExist (std::string f_c_dir_path)
E_CWORD33_Status CreateDirectory (std::string f_c_dir_path)

Detailed Description

This file contains declaration of ns_util_directory.

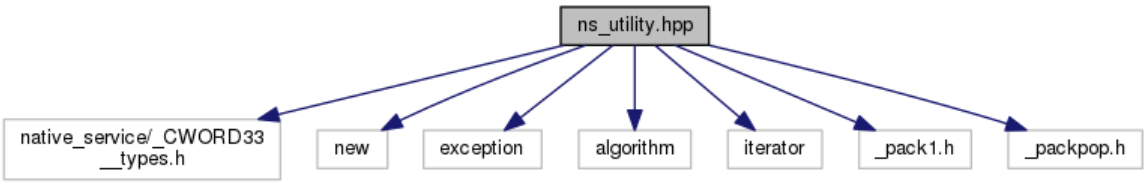
ns_utility.hpp File Reference

This file contains declaration of common APIs for NS_UtilityCenter.

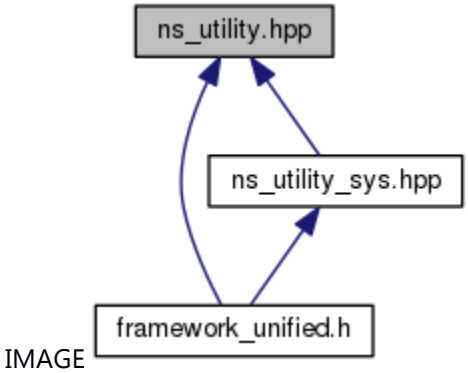
#include <native_service/_CWORD33__types.h>
#include <new>
#include <exception>
#include <algorithm>
#include <iterator>
#include <_pack1.h>
#include <_packpop.h>

Include dependency graph for ns_utility.hpp:

IMAGE



This graph shows which files directly or indirectly include this file:



IMAGE

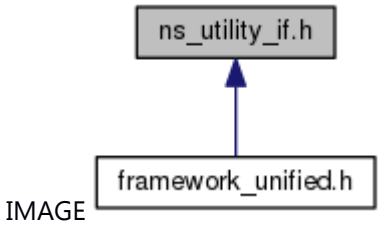
This graph shows which files directly or indirectly include this file:



IMAGE

Classes

class CXMLReader

***This file contains declaration of class CXMLReader*. Functions**

CXMLReader * GetCXMLReaderObject (CHAR *f_cFilePath)

Detailed Description

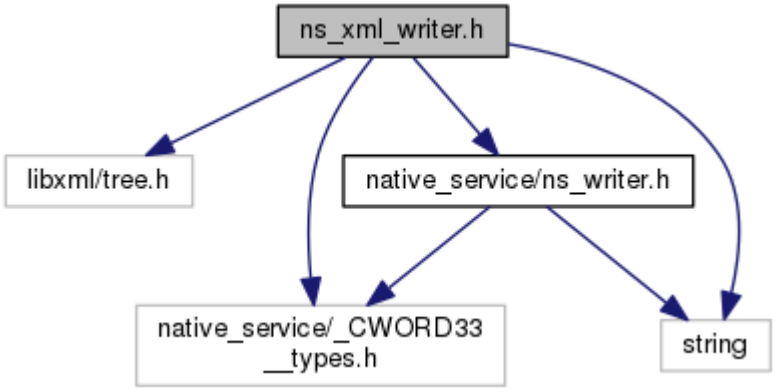
This file contains declaration of class CXMLReader.

ns_xml_writer.h File Reference

This file contains declaration of class CXMLWriter.

#include <libxml/tree.h>
#include <native_service/_CWORD33__types.h>
#include <native_service/ns_writer.h>
#include <string>

Include dependency graph for ns_xml_writer.h:



IMAGE

Classes

class CXMLWriter

This file contains declaration of class CXMLWriter. **Functions**

CXMLWriter * GetCXMLWriterObject (CHAR *f_cFilePath)
CXMLWriter * GetCXMLWriterObjectNoParam ()

Detailed Description

This file contains declaration of class CXMLWriter.

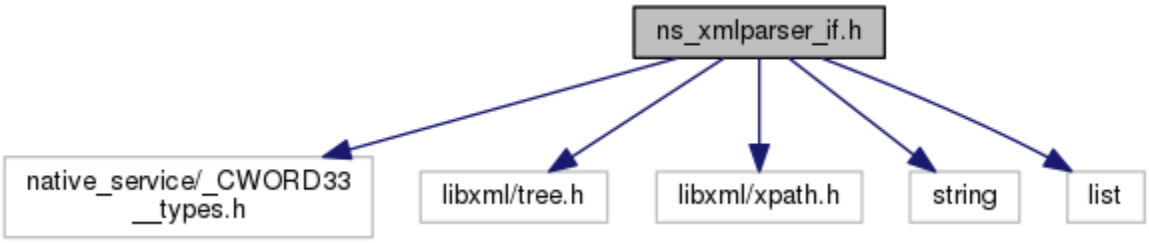
ns_xmlparser_if.h File Reference

This file contains declaration of class CXmlParser, CXmlNode and CXmlAttr. This file provides the interface for Parsing XML file, API for operation on node of an xml structure.

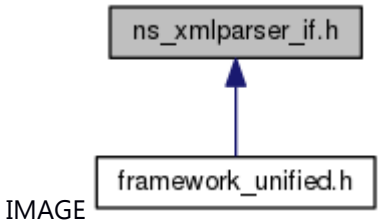
#include <native_service/_CWORD33__types.h>
#include <libxml/tree.h>
#include <libxml/xpath.h>
#include <string>
#include <list>

Include dependency graph for ns_xmlparser_if.h:

IMAGE



This graph shows which files directly or indirectly include this file:



IMAGE

Classes

class CXmlNode

This class represents node of an XML. class CXmlAttr

This class represents the attribute of an xml node. class CXmlParser

This class represents the XML parser. **Typedefs**

typedef enum _E_CWORD33_XmlNodeTypes E_CWORD33_XmlNodeTypes

Include Files.

typedef std::list< CXmlNode > **TNodeList**
typedef TNodeList::iterator **TNodeListIterator**
typedef std::list< CXmlAttr > **TAttrList**
typedef std::list< CXmlAttr >::iterator **TAttrListIterator**

Enumerations

enum _E_CWORD33_XmlNodeTypes { _CWORD33__XML_NODE_NONE = ***, _CWORD33__XML_ELEMENT_NODE = ***, _CWORD33__XML_ATTRIBUTE_NODE = ***, _CWORD33__XML_TEXT_NODE = ***, _CWORD33__XML_CDATA_SECTION_NODE = ***, _CWORD33__XML_ENTITY_REF_NODE = ***, _CWORD33__XML_ENTITY_NODE = ***, _CWORD33__XML_PI_NODE = ***, _CWORD33__XML_COMMENT_NODE = ***, _CWORD33__XML_DOCUMENT_NODE = ***, _CWORD33__XML_DOCUMENT_TYPE_NODE = ***, _CWORD33__XML_DOCUMENT_FRAG_NODE = ***, _CWORD33__XML_NOTATION_NODE = ***, _CWORD33__XML_HTML_DOCUMENT_NODE = ***, _CWORD33__XML_DTD_NODE = ***, _CWORD33__XML_ELEMENT_DECL = ***, _CWORD33__XML_ATTRIBUTE_DECL = ***, _CWORD33__XML_ENTITY_DECL = ***, _CWORD33__XML_NAMESPACE_DECL = ***, _CWORD33__XML_XINCLUDE_START = ***, _CWORD33__XML_XINCLUDE_END = ***, _CWORD33__XML_DOCB_DOCUMENT_NODE = *** }*Include Files.*

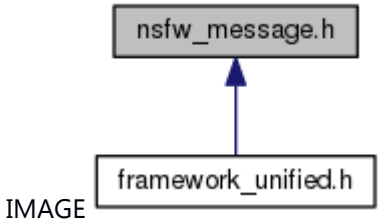
Detailed Description

This file contains declaration of class CXmlParser, CXmlNode and CXmlAttr. This file provides the interface for Parsing XML file, API for operation on node of an xml structure.

nsfw_message.h File Reference

The file definition of NSFW message for NSFW independent module reference.

This graph shows which files directly or indirectly include this file:



IMAGE

Macros

#define **_NSFW_MSG_LEN_** (40)
#define **_NSFW_SYSINFO_FLAG_** (4)
#define **_NSFW_SYSINFO_SIZE_** (64)
