What is the platform functional requirement

The actual product requirements include both generic and product-specific requirements. When industry use AGL distributed software stack, these product requirements divide to own development part and using AGL distribution part.

AGL distributed software stack is distributed from the platform functional requirement, that create by AGL community members.

Industry can adopt platform functional requirement to part of product functional requirement. In this case, industry can use AGL distributed software stack in own product.

The platform functional requirement is dominantly than product functional requirement. AGL community members can request to change the platform functional requirement.

Industry can develop final product, that combine both own software stack and customized AGL software stack.
