AGL Integration Session Yokohama

AGL Demo Integration Workshop #1#

Tuesday, Nov 6th 2018

Notes/Minutes:

- Graphics, HS/WM disussion
    - homescreen service might be rewritten
    - windowmanager no api change
    - after waltham transmitter merge only a few more patches
    - Fulup: Speech & starting applications / foregrounding application who is providing the api.
        - lifecycle in homescreen service ?
        - foreground needs to be done
- Discussion around how to implement raising an app by the speech engine on the whiteboard
    - Currently:
        - 1st get app_id from af-main
        - 2) show_window(app_id) to homescreen-service
    - Future:
        - just   show_window(<tbd>) to homescreen-service
    - Switch planned after Karlsruhe
- Discussion around how to know which application is in foreground
    - not implemented already
    - aka lifecycle foreground/background/start/stop
    - missing functions will be added by Tanikawa-san until Karlsruhe (first patches)

- Discussion about SPEC-640 (DLT-alike logging daemon)
    - Review spreadsheet in SPEC-640
- Fulup presenting about monitoring about supervision in appfw as closest feature to DLT

Wednesday, Nov 7th 2018

Notes/Minutes:

- HW equipment shipping has not discussed. We'll confirm with Toyota-san at 8th/Nov
- Progress on smixer/unicens front. Issue identified and working on fix
- lin making progress but does not fully work, yet
- old cluster demo being tested on FF weston crash. debugging
